COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc Advanced Chemical Engineering

Date of first publication/latest revision: 14/06/18

1. What is the course?

Course information

Course Title	Advanced Chemical Engineering
Course code	MSACGFTC, MSACGPTC, PDACGFTC, PDACGPTC, PCACGFTC, PCACGPTC
Academic Year	2018/19
Valid entry routes	PgCert, PgDip, MSc
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield
School(s)	School of Water, Energy & Environment
Theme	Energy & Power
Centre	Centre for Bioenergy & Resource Management
Course Director	Dr Ying Jiang
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	N/A
Registration Period(s) available	Full-time MSc - one year, part-time MSc - up to three years Full-time PgDip – one year, part-time PgDip – up to two years Full-time PgCert – one year, part-time PgCert – up to two years
Course Start Month(s)	October

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Institutions delivering the course

This course is delivered by Centre for Bioenergy & Resource Management where the research interests include:

- Energy Markets & Policy, Future Energy System
- Biofuels Processes & Technologies
- Thermodynamics in Bio-process Systems
- Biomass and Energy Conversion Technology
- Process and Energy Systems Design, Simulation and Optimisation
- Downstream process: Product Separation and Product Recovery
- Process Control
- Environmental Protection & Management

Cranfield University will interact with the following institutions and in the following ways:

- Seek support from industry for students to have professional experiences through group project.
- Seek industrial support for sponsoring MSc Thesis projects.
- Associated industrial advisory committee. The industrial advisory committee will meet on a yearly basis to help in steering the course content.
- Develop double degree relationships with European academic institutions.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not yet accredited formally by any external body. It is intended to apply for IChemE and Energy Institute accreditation

2. What are the aims of the course?

Cranfield University offers this course in order to provide engineering and applied science graduates with an advanced understanding and practical experience of the methodologies employed in chemical engineering research and chemical process technology.

The general Chemical Engineering route will equip students with diversified skills in advanced engineering, which includes theoretical and practical elements in operation, design, and control of a wide range of chemical processes. The Biorefining route will equip students with fundamental understanding of chemical engineering and solid skills to address the challenges of the rapidly growing and dynamic bioenergy sector.

The aim of the course is to prepare engineering and applied science graduates to meet the increasing demand in industry, consultancies, and the education and public sectors for engineers, scientists and advisors with expertise in a range of areas including production of chemicals, petrochemicals, biochemicals, conventional energy and bioenergy, food, and materials.

This programme is intended for the following range of students:

- Graduates with engineering or related applied science degrees keen to pursue a career as chemical engineering professionals.
- Graduates currently in employment keen to extend their qualifications or to pursue a career change.

- Applicants are required to have at least a UK 2nd class honours degree or its equivalent.
- Applications from candidates with lesser qualifications but with considerable relevant working experience will be considered.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Advanced Chemical Engineering

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Holistically apply advanced theory and practice of chemical production processes.
- ILO 2. Combine and compare appropriate techniques and tools for the operation, design, simulation, control and optimisation of a range of chemical processes.

Specific ILO for the General route:

- ILO 3. Critically evaluate technologies and strategies for the generation and application of heat and power across a number of chemical processes and energy systems scenarios.

Specific ILO for the Biorefining route:

- ILO 4. Critically evaluate and assess the current and future biorefining technologies for the sustainable production of bioenergy and biofuels based on the type of biomass used as feedstock and the targeted products.

B. Postgraduate Diploma in Advanced Chemical Engineering

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Integrate knowledge and understanding of business operation, and commercial, marketing and finance aspects in a context relevant to chemical and energy industries.
- ILO 6. Integrate knowledge, understanding and skills from the taught modules in a real-life situation.
- ILO 7. Effectively work in a small project team to identify project objectives and select appropriate methodologies to address problems faced by industrial clients; collaborating with other team members to communicate findings in a professional manner in written, oral and visual forms.

C. MSc in Advanced Chemical Engineering

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 8. Define a research question, develop aim(s) and objectives, select and execute a methodology, analyse data, and evaluate findings and draw appropriate conclusions.
- ILO 9. To communicate their findings successfully via a thesis, written in an approved School style and in an oral presentation.

4. How is the course taught?

The teaching methods include:

- Combination of structured lectures, tutorial sessions, computer-based workshops, lab-based practices and private study;
- Personal Development Planning is explicitly and implicitly developed during the course, including topics such as communication, time-management, team work, learning strategies and project management;
- Seminars delivered by invited industrial or academic experts in some areas covered by the course;
- Visits to industrial sites;
- Knowledge and understanding are further developed and enhanced through the assignments associated with some of the taught modules, the group project activity, and the final MSc individual research project;
- Timely and informative feedbacks on the assignments are an essential part of the learning process.

In addition to the teaching methods outlined above, students will be supported in their learning and personal development by:

- A dedicated electronic Blackboard site
- One-day workshop in MATLAB training
- 3-day laboratory training short course for students undertaking MSc research projects which involve experimental work
- Arrangement of attendance of relevant modules offered by other MSc programmes

The taught programme is generally delivered from October to December and from January to February. Each module is generally delivered over one week.

The group project/ is taken between February and May. Each group will typically include 4-6 students and two academic supervisors will be assigned to each group.

Group Project teams are expected to hold a minimum of 5 team meetings during the project which must be minuted and all participants must sign off the minutes. The academic supervisor will attend at least two of these meetings to record attendance, to assess individual contribution, and to provide guidance as appropriate. Students undertaking the group project are required to participate in these 5 meetings. Additionally, it is expected that students will meet and work on the project outside of the formal weekly meetings. A (student) project co-ordinator will be responsible to ensure that these meetings are used to good effect, and that appropriate minutes are taken and findings reported to the academic supervisor. Part-time (and full-time) students are encouraged to use tele-conferencing, video-conferencing and web-conferencing facilities to participate in the group project review meeting i.e. they are not always required to attend in person. This will afford students with the experience of working within a disperse project team. However, all students will be required to attend in person the initial and final project review meetings. Facilities for telephone and web-conferencing already exist in several of the available meeting rooms in Building 52 and

are routinely used for research project meetings as well as MSc group project meetings within the School. Facilities for video-conferencing also exist in Building 83.

Part time students have the option of completing a Dissertation as an alternative to the Group Project. Students opting for the Part-Time Dissertation will be assigned a supervisor by the Course Director and will agree with the supervisor an appropriate topic of study. This may be related to a workplace/industrial activity that is relevant to the student's work environment. The Dissertation will include a comprehensive literature review of classical and contemporary related material and also a discussion and properly argued conclusions. Where appropriate the Dissertation will acknowledge the work and contribution of others. The Dissertation module will be assessed in a similar way to the group project by presentation and formal report.

The individual research project is typically pursued between May and September. Each student is allocated an academic supervisor who will guide and assess the students work. Again, it is expected that a formal weekly review meeting will occur at which the student will provide a brief presentation on the work performed to date and record minutes and arising actions.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
GENERAL ROUTE - COMPULSORY MODULES:	
Induction	0
Principles of Chemical Processes	10
Process Design Simulation	10
Pilot Plant Operations	10
GENERAL ROUTE - ELECTIVE MODULES:	
3 modules chosen from:	
Process Plant Operations	10
Advanced Control Systems	10
Heat and Power Generation Systems	10
Thermal Systems Operation and Design	10
TOTAL:	60

Description	Credits
BIOREFINING ROUTE - COMPULSORY MODULES:	

Induction	0
Principles of Chemical Processes	10
Principles of Renewable Energy Technologies	10
Process Design Simulation	10
Pilot Plant Operations	10
Energy from Biomass and Waste: Thermochemical Processes	10
Biofuels and Biorefining	10
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
GENERAL ROUTE - COMPULSORY MODULES:	
Induction	0
Principles of Chemical Processes	10
Advanced Control Systems	10
Process Plant Operations	10
Thermal Systems Operation and Design Process Design and Simulation	10
Pilot Plant Operations	10
Heat and Power Generation Systems	10
Management for Technology	10
Full-time students: Group Project	40
GENERAL ROUTE - ELECTIVE MODULES:	
Part-time student to choose one:	(40)
Group Project	40
Dissertation	40
TOTAL:	120

Description	Credits
BIOREFINING ROUTE - COMPULSORY MODULES:	
Induction	0
Principles of Chemical Processes	10
Principles of Renewable Energy Technologies	10
Energy from Biomass and Waste: Thermochemical Processes	10
Evaluating Sustainability	10
Process Design and Simulation	10
Pilot Plant Operations	10
Biofuels and Biorefining	10
Management for Technology	10
Full-time students: Group Project	40
BIOREFINING ROUTE - ELECTIVE MODULES:	
Part-time student to choose one:	(40)

Group Project	40
Dissertation	40
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
GENERAL ROUTE - COMPULSORY MODULES:	
Induction	0
Principles of Chemical Processes	10
Advanced Control Systems	10
Process Plant Operations	10
Thermal Systems Operation and Design	10
Process Design and SimulationPilot Plant Operations	10
Heat and Power Generation Systems	10
Management for Technology	10
Individual Thesis project	80
Full-time students: Group Project	40
GENERAL ROUTE - ELECTIVE MODULES:	
Part-time student to choose one:	(40)
Group Project	40
Dissertation	40
TOTAL:	200

Description	Credits
BIOREFINING ROUTE - COMPULSORY MODULES:	
Induction	0
Principles of Chemical Processes	10
Principles of Renewable Energy Technologies	10
Energy from Biomass and Waste: Thermochemical Processes	10
Evaluating Sustainability	10
Process Design and Simulation	10
Pilot Plant Operations	10
Biofuels and Biorefining	10
Management for Technology	10
Individual Thesis Project	80
Full-time students: Group Project	40
BIOREFINING ROUTE - ELECTIVE MODULES:	
Part-time student to choose one:	(40)
Group Project	40
Dissertation	40

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months. This course is also offered on a part-time basis. Students would instead attend the required modules of the taught component according to a schedule agreed with the course director. Part time students taking the group project

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of $< 40\%$ (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

would still be expected to complete a group project within a six month period, the same as for Full-time students. MSc individual research projects are commonly undertaken in collaboration with the candidate's place of work.

All modules are taught over one week, with the following week largely free of structured teaching to allow time for more independent learning and reflection, and completion of assignments.

Course modules

The following modules outline all parts of the programme leading to an **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	I-ENE-INWK Occ A	Induction	P Clough	24		0	Y		01/10/18	05/10/18	N/A	AO	N/A				N/A	
2	N-BPE-PCP	Principles of Chemical Processes	G Leeke	30		10	N		08/10/18	12/10/18	40	EX	100				w/b 07/01/19	Sept 19
3	N-PSE-ACS	Advanced Control	L Lao	30		10	Y		22/10/18	26/10/18	40	ICW	100				FT 03/11/18 PT 17/11/18	July 19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have 3 written examinations, 5 - 7 pieces of assessment by submitted work and 2 -3 elements of assessment by presentation or viva.

This approach has been adapted to:

- Assess the knowledge of the students using methods appropriate to the nature of the subject area.
- Help the students to improve their technical writing and oral presentation skill.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate in Advanced Chemical Engineering

General route

Award ILOs Module No.	ILO1	ILO2	ILO3 (only for the General Route)
2	EX		
9	ICW	ICW	
10		GCW/ICW	
3	ICW	ICW	ICW
11		ICW	ICW
7	EX		EX

Biorefining route

Award ILOs Module No.	ILO1	ILO2	ILO4 (only for the Biorefining route)
2	EX		
9	ICW	ICW	

Award ILOs Module No.	ILO1	ILO2	ILO4 (only for the Biorefining route)
10		GCW/ICW	
6		EX	EX
12		ICW	ICW
4			ICW

B. Postgraduate Diploma in Advanced Chemical Engineering

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

General Route

Award ILOs Module No.	ILO5	ILO6	ILO7
13	EX		
14		GPROJ/ICW	GPROJ/ICW
15		IPROJ IPRES	

Biorefining Route

Award ILOs Module No.	ILO4 (only for Biorefining route)	ILO5	ILO6	ILO7
8	ICW			
13		EX		
14			GPROJ/ICW	GPROJ/ICW
15			IPROJ IPRES	

C. MSc in Advanced Chemical Engineering

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Both routes

Award ILOs Module No.	ILO8	ILO9
16	OR/THESIS	OR/THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and

additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Graduates from the General route will be equipped with advanced interdisciplinary skills in chemical engineering, which includes theoretical and practical elements in operation, design, and control of a wide range of chemical and energy processes. Graduates from the Biorefining route will be equipped with fundamental understanding of chemical engineering and solid skills to address the challenges of the rapidly growing and dynamic bioenergy sector. Both routes include training in management applied to the energy sector which will enable graduate engineers to effectively fulfil a wider role in a business organisation.

Graduates are likely to work in companies competing in a range of industries, including chemicals, petrochemicals, biochemicals, conventional energy and bioenergy, food, materials, consultancy and management. Those wishing to continue their education via PhD or MBA studies in the chemical or energy sectors will be greatly facilitated by the interdisciplinary, project-oriented profile that they will have acquired through this course.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Advanced Lightweight Structures and Impact

Date of first publication/latest revision: June 2018

1. What is the course?

Course information

Course Title	MSc in Advanced Lightweight Structures and Impact
Course code	MSALSFTC, PDALSFTC, PCALSFTC
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Structures, Assembly and Intelligent Automation
Course Director	Dr Hessam Ghasemnejad
Awarding Body	Cranfield University
Is this an AP Contract course?²	N/A
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University Entry Requirements (2.2 in an Engineering related subject)
UK Qualifications Framework Level	QAA FHEQ level 7 (Masters)
Benchmark Statement(s)	N/A
Registration Period(s)	1 year full-time

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Structures, Assembly and Intelligent Automation where the research interests include:

- Structural analysis (linear/non-linear).
- Numerical methods development (mesh and meshless methods).
- Crashworthiness and material response to impact loading (ranging from quasi-static to dynamic).

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRB)

This course has previously been accredited formally by Royal Aeronautical Society (RAeS) and IMechE.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- Provide in-depth understanding of the importance / implications of using advanced materials in the development of lightweight structures and their response to a range of loading (from quasi-static to dynamic loads).
- Acquire a systematic understanding of structural behaviour and failure and develop an awareness of impact and crash protection issues and phenomena, with the ability to apply this knowledge to structural design.
- Meet employer demand for graduates who have strong applied analytical skills in structural behaviour and failure, who can practically apply this knowledge to real engineering problems using the latest industry standard numerical tools.
- To develop a firm grasp of the relationship of basic phenomena to real life engineering systems, and develop industrially relevant and marketable applied skills in structures and crashworthiness.
- To supply high grade personnel to the structures and crashworthiness communities in UK, European and world industry, including aerospace, automotive, offshore and defense sectors.
- To provide a prime focus for Cranfield's growing activity in analysis and design for structural crashworthiness and impact.

This programme is intended for the following range of students:

- Any 1st or 2nd class UK honours degree (or equivalent) in an engineering related discipline.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Solve analytical and numerical problems for complex sub-structures and to analyse modern computer-based solutions for technical problems.
- ILO 2. Examine how properties of an advanced materials affect the design process.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 3. Assess the stress analysis in modern structural development and their significance for economic design.
- ILO 4. Plan the implementation of modern lightweight materials in advanced structural design and to prepare correct methods to practical demonstrations of processes.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Appraise a thorough technical understanding of modern lightweight materials, including a critical evaluation of existing processes and methods.
- ILO 6. Judge and evaluate results and outcomes of various types of analysis (experimental, analytical and numerical) related to the advanced lightweight structures.
- ILO 7. Compose a work program for evaluating new and existing design of lightweight materials structures.
- ILO 8. Resource and task work programs individually and as part of a team, estimating the time and cost associated with delivery of requirements.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Lectures.
- Computer based workshops.
- Tutorial / video sessions (where appropriate)/
- The group and individual projects are used to develop research and presentation skills (feedback provided to aid development and time management skills).
- The students will be exposed to seminars from leading national and international figures in crashworthiness and impact fields.
- Industrial visits (where appropriate).
- IT and Library Training Courses.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Induction (1)	0
6 modules from 2-9	60
TOTAL:	60

A. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Induction (1)	0
Modules 2-9	80
Group Design Project	40
TOTAL:	120

B. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Induction (1)	0
Modules 2-9	80
Group Design Project (10)	40
Individual Research Project (11)	80
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within twelve calendar months. Each module is taught over one, or two weeks, depending upon module length.

Sufficient "free" time is allocated in the timetables to provide additional time for independent learning and reflection. In addition, the larger contact hour modules are split over two weeks, with the timetable specifically designed to incorporate at least a one week break between parts to allow students to consolidate the previously taught material, before attending the concluding part(s) of the module.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to an **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-ALS-INWK	Induction Week (ALSI Course)	Dr Hessam Ghasemnejad	16		0	N		01/10/18	05/10/18	N/A	AO	N/A				N/A	
2	N-ALS-ACAS	Advanced Composite Analysis and Impact	Dr Hessam Ghasemnejad	20		10	N		08/10/18	12/10/18	40	ICW	100				09/11/18	18/01/19
3	N-ALS-ICM	Introduction to Continuum Mechanics	Dr Iman Dayyani	20		10	N		22/10/18	26/10/18	40	EX	100				01/18	03/2018
4	N-ALS-TS	Thin-walled Structures	Dr Yigeng Xu	20		10	N		05/11/18	09/11/18	40	EX	100				01/19	06/ 2019

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment

N-AVD-SS	Structural Stability	Aerospace Vehicle Design	Aerospace Vehicle Design

7. How are the ILOs assessed?

The following assessment types are utilised:

- Exam, assignment, group and individual projects

This approach has been adopted because:

- The analytical skills can be assessed by the exam while the numerical skills are mainly assessed by the assignments which give students an opportunity to apply their knowledge in practical applications. The experimental studies are examined by individual and group projects which judge students' capabilities in planning and evaluating of technical solutions in the advanced lightweight structures.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

A. Postgraduate Certificate

Award ILOs Module No.	ILO 1.	ILO 2.
1	Not Assessed

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.

2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Based on the past five years, the following patterns have emerged for typical career paths and employability of graduands:

- Return to home EU institution to complete double degree
- Continued Higher Education - PhD at different UK institutions and at Cranfield University
- Direct employment / Graduate trainee schemes (Automotive / Aerospace / Offshore/Defence)
- Consultancy – Software Development / Software Application / Crashworthiness, etc.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Advanced Materials

Date of first publication/latest revision: July 2018

1. What is the course?

Course information

Course Title	MSc in Advanced Materials
Course code	MSADMFTC, MSADMPTC, PDADMFTC, PDADMPTC, PCADMFTC, PCADMPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Manufacturing
Centre	Surface Engineering & Nanotechnology Institute
Course Director	Dr David Ayre
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s)	One year full-time, two-five years part-time

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	Full-time: October. Part-time: October.

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Manufacturing Theme where the materials related research interests include:

- Composites.
- Surface science and engineering.
- Welding.
- Ultra precision engineering
- Microsystems and Nanotechnology.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by Institution of Mechanical Engineers (IMechE) up to and including Academic year 2019-20, Institution of Engineering and Technology (IET) up to and including Academic year 2019-20, Royal Aeronautical Society (RAeS) up to and including Academic year 2019-20, Institute of Materials, Minerals and Mining (IOM3) up to and including Academic year 2018-19 and The Welding Institute (TWI) up to and including Academic year 2017-18.

2. What are the aims of the course?

AIM

The aim of the course is to provide graduate scientists and engineers with a fundamental understanding of materials properties and processing, and the necessary skills to apply their knowledge in a wide range of careers in engineering and related industries.

OBJECTIVES

The objectives of the course are to provide students with:

1. A scientific understanding of materials properties and an appreciation of how this understanding can be applied to relevant problems.
2. A scientific understanding of the processes and manufacturing routes used to convert materials into engineering products, and of the influence of processing conditions on product performance.
3. An introduction to a wide range of specific materials, including metals, polymers, ceramics and composites, and to the basic principles of materials selection for engineering and other applications.
4. An introduction to a research environment, providing familiarity with testing and processing equipment, practical approaches to problem solving, critical evaluation of data, and use of information technology.
5. The skills required to pursue a successful career in engineering and related industries.

On successful completion of the course students should be able to:

- Apply their understanding of materials properties and processing characteristics to problems in the areas of materials development, materials and process selection, and component design.
- Plan, execute and manage materials-related projects.
- Operate effectively in a team.
- Make effective oral and written presentations of their work.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- recent graduates wishing to extend their knowledge and skills in the above areas
- qualified engineers wishing to apply their skills into new areas.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a systematic understanding of materials properties and an appreciation of how this understanding can be applied to relevant problems.
- ILO 2. Demonstrate a critical awareness of a range of techniques for assessing the structure and properties of materials.
- ILO 3. Demonstrate knowledge and scientific understanding of the processes and manufacturing routes used to convert materials into engineering products, and the influence of processing conditions on product performance.
- ILO 4. Demonstrate knowledge of specific materials and their applications, including metals, polymers, ceramics and composites.
- ILO 5. Use basic principles of materials selection for engineering and other applications.
- ILO 6. Demonstrate an ability in practical approaches to problem solving.
- ILO 7. Critically evaluate data.
- ILO 8. Demonstrate a basic understanding of fracture mechanics and an awareness of approaches to failure assessment (by choice of module)
- ILO 9. Make effective use of finite element analysis programmes (by choice of module).

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 10. Demonstrate knowledge of some key general, personnel and project management techniques and an awareness of the less science-dependent aspects of technology.
- ILO 11. Demonstrate an awareness of current research/development in selected topics in the field of materials.
- ILO 12. Make effective oral and/or written presentation of their work.
- ILO 13. Operate effectively in a team.
- ILO 14. Undertake an appraisal of technical and/or commercial literature.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 15. Demonstrate a critical awareness of current research/development in selected topics in the field of materials.
- ILO 16. Undertake substantial critical appraisal of technical and/or commercial literature.
- ILO 17. Carry out substantial scientific programmes of study.

- ILO 18. Discuss their work and relate it to the work of others.
 ILO 19. Demonstrate originality in the application of knowledge in relation to an extended individual project.
 ILO 20. Plan, execute and manage materials-related projects.

4. How is the course taught?

Students will be supported in their learning and personal development by:

Comprehensive course materials are provided, as well as a web-site using the Blackboard™ Virtual Learning Environment (VLE). Students are guided through the use of interactive exercises, group and individual discussion. Students engage in class activities to practise the techniques taught.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2,3,7	30
ELECTIVE MODULES:	
Three Modules from 4, 6, 8, 9	30
RECOMMENDED MODULE	
Introduction	0
TOTAL:	60

B. **Postgraduate Diploma**

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2 to 9	80
Group Project for full-time students (11a) or Dissertation for part-time students (11b)	40
ELECTIVE MODULES:	
*Optional module 10 if available for part time students, plus choose modules to total 8 from taught modules 2 to 9	
RECOMMENDED MODULE	
Introduction	0

TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 2 to 9	80
Group Project for full-time students (11a) or Dissertation for part-time students (11b)	40
Individual Research Project (12)	80
ELECTIVE MODULES:	
*Optional module 10 if available for part time students, plus choose modules to total 8 from taught modules 2 to 9	
RECOMMENDED MODULE	
Introduction	0
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
- if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 11 calendar months.

This course is also offered on a part-time basis. The overall duration of the part-time course would normally be 2 years; the maximum overall duration normally permitted will be 3 years. For part-time Students the Group Project component is replaced by a dissertation.

The course has been structured through discussions with advisors from a range of industries centred on materials. The course comprises an introductory week and eight one week modules which are assessed, and an assessed group project and individual project. The course covers a broad range of materials areas. Specialisation is provided through suitable group and individual projects.

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	I-MAT-INWK	Introduction	Dr Sue Impey	26		0	Y		25/09/18	28/10/18	n/a	AO	n/a				n/a	
2	I-MAT-A1009	Introduction to Materials Engineering	Dr David Ayre	30		10	Y		01/10/18	05/10/18	40	EX	100				Wc 10/12/18	September 2019

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

Students can expect to have either examinations or assessment by submitted work and elements of assessment by presentation or viva.

This approach has been adopted in order to ensure that students demonstrate their understanding through a wide range of learning techniques, but are not disadvantaged through any one approach.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO1 & ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8	ILO9
2	EX	EX	EX		EX	EX		
3		ICW			ICW	ICW		
4					EX	EX	EX	
6					ICW	ICW		ICW
7	ICW	ICW	ICW	ICW	ICW	ICW		
8		ICW			ICW			
9		ICW			ICW			

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO10	ILO11	ILO12	ILO13	ILO14
5	EX				
11a		GPROJ	GPROJ	GPROJ GPRES	GPROJ
11b		ICW	ICW		ICW

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO15	ILO16	ILO17	ILO18	ILO19	ILO20

Award ILOs Module No.	ILO15	ILO16	ILO17	ILO18	ILO19	ILO20
12	THESIS OR	THESIS	THESIS	THESIS OR	THESIS	THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

This course takes graduates on to a wide range of careers involving materials, with responsibilities in research, development, design, engineering, consultancy and management in industries including aerospace, automotive, medical, sports, food and drink processing, chemical processing and power generation.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Advanced Mechanical Engineering

Date of first publication/latest revision: 21/03/18

1. What is the course?

Course information

Course Title	Advanced Mechanical Engineering
Course code	MSAMEFTC, MSAMEPTC, PDAMEFTC, PDAMEPTC, PCAMEFTC, PCAMEPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Full time, Part time
Location(s)¹ of Study	Cranfield
School(s)	School of Water, Energy and Environment
Theme	Energy & Power
Centre	Centre for Power Engineering
Programme Director Course Director	Dr Gill Drew Dr Joy Sumner
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	A first or second class UK Honours degree (or equivalent) in mathematics, physics or an engineering discipline. Other recognised professional qualifications or several years' relevant industrial experience may be accepted as equivalent; subject to approval by the Course Director.
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Benchmark Statement(s)	N/A
Registration Period(s) available	Full-time MSc, PgDip and PgCert - one year, Part-time MSc, PgDip and PgCert - up to three years
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the Energy & Power Theme, where the research interests include fluid mechanics, structural integrity, renewable energy and biofuels.

Cranfield University interacts with the following institutions and in the following ways:

Double degree relationships with European academic institutions have been developed (France, Italy and Spain) and future collaborations with other institutions are planned.

Plans are in place to:

- Establish an industrial advisory committee
- Develop relationships with appropriate international industries.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited by the Institution of Mechanical Engineers (IMechE) and the Royal Aeronautical Society (RAeS) until 2019.

2. What are the aims of the course?

Cranfield University offers this course in order to:

Provide advanced, post-graduate education in the theory and practice of Mechanical Engineering. The course includes a broad range of Mechanical Engineering topics particularly relevant to the Energy sectors including Mechanical Engineering Design and Assessment. Material presented in the course modules deals with the design, operation and optimisation of machinery, structural integrity and project management. The course will appeal to graduates and practicing engineers who wish to enhance their understanding of Mechanical Engineering with a view to management of large engineering projects. It will also appeal to students as a conversion course from other branches of engineering and as an upskilling course particularly for overseas graduates. This is a broad course complementing the existing specialist MSc courses that the School of Water, Energy and Environment provides.

This programme is intended for the following range of students:

- Graduates and practicing engineers who wish to enhance their knowledge of various mechanical engineering fields with a view to managing key engineering projects.
- Graduates currently in employment, or overseas graduates, who wish to extend their technical qualifications or up-skill their qualifications.
- Graduates with science degrees or from other branches of engineering who wish to pursue a career change and require a conversion course.
- Candidates with other educational qualifications but who possess considerable relevant experience.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Advanced Mechanical Engineering

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Critically evaluate advanced mechanical engineering techniques necessary for solutions in the energy sectors.
- ILO 2. Design appropriate strategies for employing advanced technologies and management issues to provide solutions for international industries and/or research organisations.
- ILO 3. Appraise, evaluate and interpret information and theories applied to the engineering solution of problems in fluid dynamics and loading, computational fluid dynamics, control systems, fatigue and fracture, analytical and computational stress analysis and power generation.
- ILO 4. Assess and interpret management methodologies and techniques that apply to the planning and execution of engineering projects, performed both individually and in teams, and for which self-direction and the ability to work effectively and professionally under time pressure are required.

B. Postgraduate Diploma in Advanced Mechanical Engineering

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Integrate knowledge, understanding and skills from the taught modules in a real-life situation to address problems faced by industrial clients; creating new problem diagnoses, designs, or system insights; and communicating findings in a professional manner in written, oral and visual forms.

C. MSc in Advanced Mechanical Engineering

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 6. Define a research question, develop aim(s) and objectives, select and execute a methodology, analyse data, evaluate findings critically and draw justifiable conclusions, demonstrating self-direction and originality of thought
- ILO 7. To communicate their individual research via a thesis and in an oral presentation in a style suitable for academic and professional audiences.

4. How is the course taught?

Students will be supported in their learning and personal development by engaging with the wider learning environment at Cranfield through attendance of seminars and lectures arranged from time to time. It is confirmed that the course will be delivered by conventional means with no element of distance learning and/or flexible delivery. The students will have access to the e-learning support through Blackboard.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Induction Week	0
Structural Integrity	10
Fluid Mechanics & Loading	10
CFD for Renewable Energy	10
Management For Technology.	10
ELECTIVE MODULES:	
2 modules from:	
Engineering Stress Analysis: Theory and Simulations	10
Advanced Control Systems	10
Heat and Power Generation Systems	10
Risk & Reliability Engineering	10
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Induction week	0
Fluid Mechanics & Loading	10
Advanced Control Systems	10
Risk & Reliability Engineering	10
Engineering Stress Analysis: Theory and Simulations	10
Computational Fluid Dynamics for Renewable Energy	10
Heat and Power Generation Systems	10

Structural Integrity	10
Management for Technology	10
Group project (Full time students)	40
ELECTIVE MODULES:	
Part Time Students: Group Project	40
OR Dissertation	40
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Induction week	0
Fluid Mechanics & Loading	10
Advanced Control Systems	10
Risk & Reliability Engineering	10
Engineering Stress Analysis: Theory and Simulations	10
Computational Fluid Dynamics for Renewable Energy	10
Heat and Power Generation Systems	10
Structural Integrity	10
Management for Technology	10
Group project (Full time students)	40
Individual Research Project	80
ELECTIVE MODULES:	
Part Time Students: Group Project	40
OR Dissertation	40
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout

the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months

This course is also offered on a part-time basis for which students most register in October, and to complete the course within 24 or 36 (accordingly to the study plan agreed) calendar months.

Taught part 1: Modules

Each module is generally delivered over one week, with time allowed for more independent learning and reflection. Modules are given in the period between October and March. There are two exam periods; at the end of the first term and at the end of the second term. Full time students will undertake these modules in the same academic year. Part time students will agree a time plan with the Course Director before the start of the first year of their studies.

Taught part 2: Group Project / Dissertation (part time students only)

The Group Project takes place after the completion of the taught modules phase and consists of a total of 16 contact hours with a member of the teaching staff and 384 hours of private study and collaboration with the student members of the group. This corresponds roughly to 1.5 contact hours and 38 private study/group working hours per week. This module is compulsory for full time students, and optional for part time students. Part time students have the option of completing a Dissertation as an alternative to the Group Project. If part time students chose to take the Group Project module instead of completing a Dissertation they are required to attend (in person or remotely, ie through WebEx) the weekly group project meetings. A member of the teaching staff attends these meetings and attendance is recorded. It is compulsory for the part-time students to attend in person the first Group Project meeting (usually on the last week of February) and the last meeting, when a group presentation with a poster is held. The majority of the work involved in the group project occurs outside the weekly meetings, and is planned and organized by the students. For part time students, this collaboration outside the weekly meetings can be performed through attendance in person/remotely, phone, e-mail, written interim reports, etc. The group will nominate a minute taker and chair weekly, who take notes of these activities and report them to the group supervisor. Furthermore, the students use a shared drive owned by the Department, this is a repository for all the material produced and collected during the project. The supervisor, as member of the teaching staff, has access to it and he/she can monitor in a direct way the progresses of both part-time and full-time students.

Students opting for the Part-Time Dissertation will be assigned a supervisor by the Course Director and will agree with the supervisor an appropriate topic of study. This may be related to a workplace/industrial activity that is relevant to the student's work environment. The Dissertation will include a comprehensive literature review of classical and contemporary related material and also a discussion and properly argued conclusions. Where appropriate the Dissertation will acknowledge the work and contribution of others. The Dissertation module will be assessed in a similar way to the Group Project by presentation and formal report.

Individual Research Project

For full time students, the Individual Research Project takes place during the third term (April-September).

By the end of March each year, each student will be allocated to a project supervisor who will guide them in selecting a research project. **Part time students** should define their research projects, to be undertaken commonly either partly or totally at their place of work, by the beginning of the second year of registration.

After the completion of the Group Project, full time students commence working on their research projects on a full-time basis. The research activity for part-time students starts commonly at the beginning of second year of registration (i.e. after successfully completing three taught modules). All students are required and must maintain regular contact (meetings, telephone conversations or e-mail correspondence) with their personal supervisor to discuss progress.

Course modules

The following modules outline all parts of the programme leading to an MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ³	Total hours delivered by Visiting Lecturers ⁴	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁵ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁶ (%) of Independent assessments	Weighting within module of multi-part assessments ⁷ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ⁸	Assessment Submission and/or exam date ⁹	Assessment / Exam Retake date
1	I-ENE-INWK Occ A	Induction	P Clough	24		0	Y		01/10/18	05/10/18	N/A	AO	N/A				N/A	
4	N-AME-RR Occ A	Risk and Reliability Engineering	M Shafiee	30		10	Y		08/10/18	12/10/18	40	EX	100				w/b 07/01/19	
3	N-PSE-ACS Occ A	Advanced Control Systems	L Lao	30		10	Y		22/10/18	26/10/18	40	ICW	100				FT 03/11/18 PT 17/11/18	
5	N-AME-ESA	Engineering Stress Analysis: Theory and Simulations	A Mehmanparast	32		10	Y		12/11/18	16/11/18	40	ICW	100				FT 01/12/18 PT 15/12/18	

³ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁴ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁵ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁶ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁷ For **multi-part assessments** please record the overall weighting of module which should be 100%.

⁸ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

⁹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Module Number	Module code	Title	Module Leader	Contact hours ³	Total hours delivered by Visiting Lecturers ⁴	Credits	Is the module shared? Y/N	Calendar			Assessment

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have three written examinations, seven pieces of assessment by submitted work and two elements of assessment by presentation or viva. This approach has been adopted in order to provide a balance between formal examination and a less rigid written/verbal communication.

Formal lecture courses are examined in accordance with the School of Water, Energy and Environment practice. Prior to the examinations taking place all examination papers are seen and approved first by a member of the department and then by the course external examiner.

The underlying assessment strategy across all modules will be to examine the understanding of mechanical engineering principles and applications. This will be achieved by testing the ability to solve realistic multi-disciplinary problems within a Mechanical Engineering context. Proper application and appreciation of mechanical engineering models and methodologies will be paramount to the successful completion of the course.

Coursework will be set to reinforce and expand taught elements of the course. This will be a combination of open ended assignments and analytical/numerical based problem solving. Coursework will be assessed on the rigour and quality of the reports with merit given to diligence and evidence of understanding of the underlying methods.

- Each course member is required to make a formal presentation on his/her Individual Research Project.
- Upon submission, all theses are reviewed by two internal examiners (one examiner being the course member's supervisor), plus the external examiner.
- If the Individual Research Project mark awarded by the internal examiners varies significantly, then a third internal examiner is appointed.
- All course members are subject to a presentation or viva voce examination in the presence of members of Academic staff.

Assessment of Individual MSc Theses

The Individual Research Project (IRP) tests:

- The ability to define the project by reference to scientific, technical and/or commercial literature, the critical appraisal of such literature and the justification of the research;
- The ability to plan and manage the research programme, to define the work to be carried out and to report the results in a clear manner;
- The ability to analyse the work, relate it to the work of others where appropriate and to be self-critical;
- To communicate the work, its results and analysis in a technical and well-presented document.

Assessment of the Group Project (GP)

The Group project tests:

- The ability to undertake the design of an engineering component or system, and substantiate the design through analysis;
- The ability to plan and manage the design project programme, to define the work to be carried out and to report the results in a clear manner;
- The ability to analyse the design, relate it to the work of others where appropriate and to be self-critical;
- To communicate the design, its results and analysis in an oral presentation and in a technical and well-presented document.

Assessment of the Dissertation (Part-Time option) module tests:

- The ability to plan, structure and manage a detailed study of an engineering process, system, component or methodology and to communicate results in a clear manner;
- The ability to assemble a workplace/industrial activity into a coherent study formulating properly argued conclusions and where appropriate building upon and acknowledging the work and contribution of others;
- The ability to analyse and where appropriate to relate to the work of others and to be self-critical;
- To communicate the dissertation in an oral presentation and in a technical and well-presented document.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. PgCert

Award ILOs Module No.	ILO 1.	ILO 2.	ILO 3.	ILO 4.
2	ICW	ICW	ICW	
7	ICW	ICW	ICW	
8	EX	EX	EX	
9			EX	EX
3	ICW	ICW	ICW	
4	EX	EX	EX	
5	ICW	ICW	ICW	
6	ICW	ICW	ICW	

B. PgDip

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 5.
10	GPROJ ICW

Award ILOs Module No.	ILO 5.
11	IPROJ IPRES

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 6.	ILO 7
12	THESIS OR	THESIS OR

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. **How will the University assure the quality of the provision?**

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Graduates from the course will be equipped with the academic skills and requirements to successfully pursue a career in a Mechanical Engineering discipline whether this is technical, management or research.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: Motorsport and Automotive Programme

Date of first publication/latest revision: 08/01/2018

1. What is the course?

Course information

Course Title	MSc Advanced Motorsport Mechatronics
Course code	
Academic Year	2018-19
Valid entry routes	MSc
Additional exit routes	PGDip, PGCert
Mode of delivery	Full-Time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Advanced Vehicle Engineering Centre
Course Director	Dr Stefano Longo
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s)	One year

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	September

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Transport Systems, Advanced Vehicle Engineering Centre where the research interests include:

motorsport engineering and business, vehicle electrification including powertrain, Internal Combustion Engine (ICE), and hybrid powertrain, advanced control, multi-domain modelling, autonomous technologies, low carbon vehicles, vehicle dynamics on circuit and off road, simulation, electronics and data acquisition. Beyond the centre we will draw upon Cranfield's research related expertise and underpinning facilities.

Cranfield University interacts with the following institutions and in the following ways:

The Engineering Council in relation to the IET, IMechE and RAeS for accreditation

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

The course will seek accreditation from the RAeS, IET and the IMechE, after it has run for two years, to comply with the accreditation rules. The course has been designed in almost exactly the same way as the existing MSc Advanced Motorsport Engineering and MSc Automotive Mechatronics, which have recently received (or renewed) the accreditation from the RAeS, IET and the IMechE through the Engineering Council.

2. What are the aims of the course?

- Provide students with a sound understanding of the fundamental scientific, engineering and managerial principles involved in motorsport, and their implementation within a high performance technology context
- Provide students with an overview of the knowledge of the design, construction and operation of competition vehicles, and related aspects of aerodynamics, vehicle dynamics, vehicle systems, control systems, electronics, data acquisition, simulation and the business context of and management techniques related to motorsport and high performance engineering.
- Equip students with the skills required for the planning, execution and reporting of Motorsport mechatronics related projects and to prepare them for a variety of roles in motorsport, either within the factory and/or working trackside with competition teams and their suppliers.
- Meet employer demand for post graduate engineers who have applied analytical skills in motorsport mechatronics and niche high performance vehicle system and component design to meet the challenge of motorsport competition with reference to the technical and sporting regulations. These include the demands associated with the safety of competitors, officials, spectators, along with vehicle and trackside safety. The M-level graduates developed skills will also support performance, competitive advantage and sustainability with reference to environment considerations.
- Provide a primary training and dissemination route for Cranfield University's increasing research portfolio in the area of low carbon vehicle technologies and design methods.
- Supply to the motorsport, niche high performance and mainstream automotive segments (and associated supply chains) high calibre post graduate engineers with the technical,

managerial qualities, transferable skills and independent learning ability to make them effective in organisations that utilise mechatronics in their businesses.

This programme is intended for the following range of students:

- First or Second class UK Honours degrees or the international equivalent in engineering, aerospace, mathematics, physics and closely related disciplines such as electronics who wish to gain knowledge of the engineering, management, science and technologies relevant to motorsport mechatronics.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Analyse methodologies and design considerations, in relation to engineering, including mechatronics applications, and business subjects in the context of motorsport.
- ILO 2. Evaluate the performance of a range of technologies which underpin motorsport engineering, with reference to those related to mechatronics systems;
- ILO 3. Assess the impact of different mechatronic systems as applied to motorsport, using simulation tools and benchmarking.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 4. Select and then apply a range of managerial techniques and business solutions within a group project environment;
- ILO 5. Evaluate the engineering trade-offs and design constraints of one or more motorsport mechatronics applications in relation to a motorsport engineering group design project;
- ILO 6. Assess their personal development with reference to individual contribution and peer assessment in a team working context. .

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 7. Appraise an area or areas of motorsport mechatronics through individual research;
- ILO 8. Synthesise their individual research in the form of a thesis report and poster.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Provision of lectures from academics, leading industry experts and practitioners highlighting the practical implementation and constraints associated with the theoretical principles introduced on the programme.
- All course material is available via the web-based learning environment Blackboard.
- The course is timetabled as a series of modules thereby allowing diligent students to effectively manage the assessment requirements of the course.

- The provision of non-assessed study-skills training covering areas such as; academic report writing, presentation skills, research skills and working with University facilities (IT, library, Student Support Services).
- The extensive use of tutorial sessions and computer aided engineering exercises employing software packages commonly utilised in industry, including Matlab, LabView, AVL Boost, Control Desk, ChassisSim and Dymola.
- The opportunity to complete an individual Research Project, which may be sponsored by industry and using industry scale laboratory facilities and software packages (academic licences or commercial licences where the supporting companies make these available).
- Provision of a Personal Development Programme integrated throughout the Taught Modules, Group Design and an individual Research Project that encourages the development of transferable skills (such as oral and written communication skills, independent learning, networking and project management).
- Problem-based learning - this kind of learning encourages self-conducted, individualised learning and thereby also the students' own responsibility for learning; it should also support the personal and professional growth of the student.
- Use of experiences from laboratory or industrial practice, as a starting point when training abilities for problem solving and critical analysis, should greatly increase integration between theory and practice.
- Theoretical class exercises including motorsport related case studies as a means for the students to learn how to apply variations of common solutions to standard problems and students get feedback from colleagues and lecturers.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
60 credits from modules 2-9	60
ELECTIVE MODULES:	
n/a	
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	

Modules 1-10	120
ELECTIVE MODULES:	
n/a	
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 1-11	200
ELECTIVE MODULES:	
n/a	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee); ³
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will

³ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);

- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in September and are expected to complete the course within 12 calendar months.

Within the first term, all students will attend most of the MSc Advanced Motorsport Engineering modules. During the second term, students will attend most of the MSc Automotive Mechatronics modules. The Group Design Project will be distributed over term 2. For the duration of the 3rd term, students will have the opportunity to undertake their individual Research Project. There are no elective elements within the individual courses.

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁴	Total hours delivered by Visiting Lecturers ⁵	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁶ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁷ (%) of Independent assessments	Weighting within module of multi-part assessments ⁸ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ⁹	Assessment Submission and/or exam date ¹⁰	Assessment / Exam Retake date
1	I-MEM-INWK	Introduction to Motorsport	Clive Temple	35	0	0	Y		26/09/18	05/10/18	n/a	AO	n/a				n/a	n/a
2	I-MEM-A1001	Motorsport Electronics and Data Acquisition	Dr Kim Blackburn	35	0	10	Y		22/10/18	26/10/18	50	EX	100				03/01/19	June or September 2019

⁴ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁵ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁶ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁷ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁸ For **multi-part assessments** please record the overall weighting of module which should be 100%.

⁹ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹⁰ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS – Thesis; MULTI – Multi-part Assessment

Module Number	Module code	Title	Module Leader	Contact hours ⁴	Total hours delivered by Visiting Lecturers ⁵	Credits	Is the module shared? Y/N	Calendar			Assessment

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have written examinations, assessment by submitted work and elements of assessment by oral presentation or viva. However, only one form of assessment will be used in relation to a taught module, either an assignment or a closed book examination.

This approach has been adopted because:

This approach has been adopted in order to offer diversity in assessing students in relation to learning outcomes. The Course also employs peer- and self-assessment activities to reinforce the reflective abilities that are necessary for working effectively in teams. These

encourage student involvement with their learning, and give them some sense of responsibility with regards to the unit of study.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO 1	ILO 2	ILO 3
1	AO		
2	EX	EX	EX
3	EX	EX	EX
4	EX	EX	EX
5	GCW	GCW	
6	ICW	ICW	ICW
7		EX	EX
8		ICW	ICW
9	ICW		ICW

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 4	ILO 5	ILO 6
10	GPROJ	GPROJ ICW	ICW

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 7	ILO 8
11	THESIS	OR

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)
n/a			

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

Engineering roles, especially mechatronics related ones, in motorsport and high performance engineering: students are likely to go onto careers in F1, Formula E, WRC, WRX, Moto GP, endurance racing, touring cars, motorsport equipment manufacturers and suppliers, automotive OEMs and consultancies.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Aerospace Computational Engineering

Date of first publication/latest revision: October 2018

1. What is the course?

Course information

Course Title	MSc in Aerospace Computational Engineering
Course code	MSACNFTC, MSACNPTC
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield
School(s)	School of Aerospace, Transport and Manufacturing (SATM)
Theme	Aerospace
Centre	Computational Engineering Sciences
Course Director	Dr. Laszlo Konozy
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	N/A
Registration Period(s)	Full-time MSc - one year, Part-time MSc - three years

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	September

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing (SATM), Aerospace Theme, Centre of Computational Engineering Sciences where the research interests include:

- Fluid dynamics of single- and multi-phase and multi-species flows.
- Steady and unsteady aerodynamics for investigating laminar and turbulent flows.
- Transitional flows, classical and advanced turbulence modelling.
- Heat transfer and its application related to complex flow problems.
- Development of advanced numerical methods for a broad range of fluid flow problems.
- Scientific and high performance computing.
- Computational fluid dynamics with the applications in aerospace, automotive, environmental, energy, micro- and nanotechnology, nuclear, bio-medical, chemical and defence sectors.
- Computer vision.
- Vibro-acoustics for condition monitoring.
- Computational engineering for fluids and solids.
- Software Engineering for Technical Computing, Computer Aided Engineering.

Cranfield University interacts with the following institutions and in the following ways:

The course has a strong association with a number of academic institutions world-wide that regularly supply students onto MSc courses in the Centre of Computational Engineering Sciences at Cranfield University. Students may follow the course as part of a double degree arrangement with their home institution whereby the final year of their five year programme is replaced with the MSc here at Cranfield. Other students are self-funded.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

We will be seeking accreditation for IET, IMechE, and RAeS. This course is designed to align with the MSc in Computational and Software Techniques in Engineering and the MSc in Computational Fluid Dynamics, which are already accredited.

2. What are the aims of the course?

- Provide a comprehensive training programme in Aerospace Computational Engineering (ACE) which will enhance the skills of the graduate student through a detailed introduction to the state-of-the-art computational methods and their applications for digital age aerospace engineering applications.
- Combination of both computational flow physics and computational science to enable the student to understand the current suite of digital techniques for aerospace simulations.
- Access to the university High Performance Computing (HPC) facilities for teaching and research projects and opportunity to work on research projects proposed by industry.
- Provide a unique opportunity to work within a team on a cutting edge group project based on a digital wind tunnel for aerospace applications through the Cranfield Aerospace Integrated Research Centre (AIRC).

- Provide a unique opportunity for cross-disciplinary education and knowledge transfer in the computational engineering of fluid and solid mechanics for aerospace industrial applications.
- Produce graduate engineers and leaders for the rapidly expanding digital simulation age focusing on fully integrated digital design for aerospace applications to understand and implement numerical methods on various computing platforms for aerospace applications.
- Provide a CPD opportunity through the part-time course option for qualified engineers wishing to extend their knowledge of Aerospace Computational Engineering and incorporate CFD into their practice.
- Equip graduates with the knowledge, understanding and skills required to enable them to meet the demand of an evolving workplace that requires highly qualified engineers possessing core software engineering skills together with competency in mathematical analysis techniques.
- Develop suitably trained and qualified engineers, scientists and mathematicians enabling them to apply the analytical, computational and software skills to the solution of practical engineering IT problems in industrial, commercial and governmental organisations.

This programme is intended for the following range of students:

- UK students with an honours degree in Engineering, Computer Science, Mathematics, Physics.
- Mature students with at least 5 years relevant industrial experience.
- Students studying at recognised EU Universities with at least 4 years of relevant academic study.
- Recent graduates wishing to extend their knowledge and skills in the above areas.
- Qualified engineers wishing to apply their skills in new areas.
- Qualified engineers working with computational methods in a particular area wishing to extend their knowledge and enhance their practice by knowledge transfer from different application areas.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Assess and evaluate the selection of computer languages, software tools, and technologies, and apply them to solve practical problems of a computational nature in aerospace engineering solutions.
- ILO 2. Distinguish the principles of numerical analysis, concepts of stability, approximation and convergence, and estimate the numerical solution of the system of algebraic equations.
- ILO 3. Create original software solutions to aerospace computational engineering problems by using industry standard software libraries, packages and engineering tools.
- ILO 4. Assess the state-of-the-art computational methods for incompressible and compressible flows used in aerospace engineering including the understanding of the advantageous features and limitations of these methods to identify the possible sources of uncertainties for aerospace applications.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Compose written reports and prepare and deliver oral presentations that effectively communicate proposals, technical developments, and computational results.
- ILO 6. Set up a systematic approach to mesh generation methods and visualisation techniques including their application and interpretation for aerospace engineering problems.
- ILO 7. Distinguish between open source and commercial Computational Fluid Dynamics and Finite Element Analysis software packages relevant to aerospace application(s).
- ILO 8. Use and select appropriate software packages to practical aerospace computational engineering application(s), and evaluate the outcome.
- ILO 9. Critically evaluate a project to include: a) computational aerospace engineering methods; b) project outcomes and results; c) one or more aspects of strength and weakness of the selected methods; d) propose appropriate solutions for the investigated aerospace application; e) recommendations for the future work.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 10. Distinguish and assess systematic computational aerospace engineering methods for different industrially relevant fluid flow problems with the focus on planning and implementing assigned projects under time pressure, and undertake self-directed learning when necessary.
- ILO 11. Assemble a body of relevant technical literature in the field of aerospace computational engineering and discuss and evaluate each work with respect to a technical problem relevant to an industrial application.
- ILO 12. Propose, plan and implement an independent research project on a relevant technical topic of aerospace engineering and critically evaluate project results, discuss findings, and relate their contribution to other works in the field.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- A comprehensive set of carefully prepared lecture notes that form the basis for the teaching will be available to students on the VLE. This is perhaps the most valuable resource and reference point for the student starting a new module. Secondly, many lectures are given in PC Labs in conjunction with some form of programming. Students are encouraged, given time and practical assistance to develop their software skills. Part-time students applying to current MSc's within the CES centre are primarily coming from industry and contribute to the diverse structure of the centre. Therefore, the learning experience of part-time students will be supported by providing them with course material and support through distance learning techniques. Part-time students will be supported through regular consultations by using e.g. WebEx and Skype as a part of their study. For performing simulations, part-time students will have opportunity to access our High-Performance Computing facilities remotely. Regular meetings will be organised for each group when the group design project will be running and part-time students will be able to attend on these meetings either in person or online. Additionally, a Part-Time Student Advisor (PTA) will be appointed from the academic team who can advise on module selection for years 1 and 2 and maintain university and course updates whilst away from Cranfield thus ensuring the part-time student is prepared before attending any modules in Cranfield.
- The library resources and search facilities here at Cranfield. A thorough introduction to these resources and demonstrations of information retrieval skills is provided at the

beginning of the course. The library facilities are extensive and there is a good representative selection of books and periodicals relevant to the course. Where an article, book or periodical is not available it can usually be obtained elsewhere via inter-library loans. Books, software and other resources are purchased by the group when it is necessary for one of the projects.

- This course uses assignment, group project and individual thesis project. This approach has been adopted in order to prepare the student with the requisite skills for a career in digital engineering, digital engineering management or research. This approach will enable the student to demonstrate an understanding of theory and application at masters level through written technical reports and papers and oral presentations. Since in this course practical application is key to development of understanding and skills acquisition, all taught modules are assessed by individual assignment. In addition, a group project will be assessed based on the skill sets acquired through the taught components of the course. Finally, application of the knowledge and its understanding is also assessed through the thesis project.
- A programme of seminars given by external and internal speaker is also provided for the MSc in Aerospace Computational Engineering students. These reflect the course, sponsoring companies and associated research carried out in the group enabling the students to get an appreciation of related work going on in industry and other universities. Part-time students will usually be able to attend on the aforementioned seminars through e.g. WebEx and Skype as a part of their study. Furthermore, additional consultation hours and support will be offered by the module leaders between the end of their completed modules and the start of their subsequent modules.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1-4	40
20 credits selected from Modules 5-8	20
ELECTIVE MODULES:	
n/a	
TOTAL:	60

B. **Postgraduate Diploma**

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits

COMPULSORY MODULES:	
Modules 1-8	80
Group Project for full-time students (9) or Individual Dissertation for part-time students (10)	40
ELECTIVE MODULES:	
n/a	
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 1-8	80
Group Project for full-time students (9) or Individual Dissertation for part-time students (10)	40
Individual Research Project (11)	80
ELECTIVE MODULES:	
n/a	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
- if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in September and are expected to complete the course within 11 calendar months.

Part-time students register for the course in September and are expected to complete the course within 3 years.

Each module is taught over a period of one week. Practical work forms an important part of the teaching and so a significant amount of time is devoted to hands-on sessions with a software package or development environment. This also facilitates independent learning on the part of the student.

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-CST-C++P04	C++ Programming	Dr Irene Moulitsas	32	0	10	Y		26/09/18	06/10/18	40	ICW	100				18/12/18 (F-T)	19/03/19
2	N-CST-CM	Computational Methods	Dr Irene Moulitsas	31	0	10	Y		27/09/18	06/10/18							13/01/19 (P-T)	
3	N-CFD-NMCF	Numerical Modelling for Steady and	Dr Panagiotis Tsoutsanis	20	0	10	Y		15/01/19	19/01/19	40	ICW	100				16/02/19 (F-T)	13/06/19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates

7. How are the ILOs assessed?

This course uses assignment, group project and individual thesis project.

This approach has been adopted in order to prepare the student with the requisite skills for a career in digital engineering, digital engineering management or research. It will enable the student to demonstrate an understanding of theory and application at masters level through written technical reports and papers and oral presentations. Since in this course practical application is key to development of understanding and skills acquisition, all taught modules are assessed by individual assignment. In addition, a group project will be assessed based on the skill sets acquired through the taught components of the course. Finally, application of the knowledge and its understanding is also assessed through the thesis project.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4
1	ICW			
2	ICW	ICW		ICW
3			ICW	ICW
4			ICW	ICW
5		ICW		
6		ICW		
7				ICW
8		ICW	ICW	ICW

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO5	ILO6	ILO7	ILO8	ILO9
9	GPROJ GPRES RP	GPROJ GPRES RP	GPROJ GPRES RP	GPROJ GPRES RP	GPROJ GPRES RP
10	ICW RP	ICW RP	ICW RP	ICW RP	ICW RP

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO10	ILO11	ILO12
11	OR THESIS	OR THESIS	OR THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)
Two modules with an Integrated Assessment	N-CST-C++P04 – C++ Programming N-CST-CM Computational Methods	ICW	100

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

This Masters course in 'Aerospace Computational Engineering', with its blend of skills-based and subject-specific material equips students with the generic hands-on skills and up-to-date knowledge adaptable to the wide variety of applications in the field of aerospace computational engineering. This will lead to opportunities within the rapidly expanding digital engineering sector and specifically to the aerospace industry where fully integrated digital techniques are used. This approach is widely used in companies such as Airbus, Boeing, Rolls Royce and Siemens.

Typically students seek employment in the computational aerospace engineering market. Enquiries regarding availability of potential employees are received from many quarters, both in the EU and elsewhere. There is considerable demand for personnel with expertise in aerospace engineering software development and for those who have strong technical programming skills in industry standard languages and tools. Graduates of the courses currently within the Centre of Computational Engineering Sciences are in demand by CAD vendors, commercial engineering software developers, aerospace, automotive, and other industries and research organisations. Successful students have been particularly successful in finding long-term employment.

Some students may go on to register for PhD degrees, many, on the basis of their MSc research project. Thesis topics are most often supplied by individual companies on in-company problems with a view to employment after graduation - an approach that is being actively encouraged by a growing number of industries.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Aerospace Dynamics

Date of first publication/latest revision: September 2018

1. What is the course?

Course information

Course Title	MSc in Aerospace Dynamics with options in: Aerodynamics Flight Dynamics
Course code	MSASDFTC, MSASDPTC, PCASDFTC, PCASDPTC
Academic Year	2018-19
Valid entry routes	MSc
Additional exit routes	PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Aeronautics
Course Director	Prof Kevin Garry
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s)	Full-time MSc - one year, Part-time MSc - up to three years

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Aeronautics where the research interests include:

- Fluid Mechanics
- Flight Dynamics
- Applied Aerodynamics Applications

Cranfield University interacts with the following institutions and in the following ways:

- We offer APL to students of the Empire Test Pilot School who wish to undertake this course and meet the standard entry requirements of the University.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by The Royal Aeronautical Society (RAeSoc) until 2018/2019.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- equip candidates from backgrounds in engineering or physical science with the knowledge, understanding and skills required to enable them to contribute to the aerospace industry or to aerospace related research;
- develop a candidates' specialist technical skills and to give them an awareness of aerospace sciences so that their specialist skills can be most effectively applied;
- develop the candidates transferable skills for a professional career in the aerospace or related industry.

Postgraduate Certificate (PGCert) exit route is provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- Those with undergraduate qualifications in General Engineering, Mathematics or Physics seeking to move into the aerospace sector.
- Those with undergraduate qualifications in Aeronautical Engineering seeking to specialise in a specific branch of Aerospace Dynamics or to broaden their knowledge and understanding of this area.
- Those with the other academic qualifications together with the required number of years industrial experience such that they meet Cranfield University's equivalent entry requirements, who are looking to obtain a formal Masters level qualification in Aerospace Dynamics.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a systematic knowledge and critical evaluation of the key principles of the aerospace disciplines (aerodynamics, control, flight dynamics, etc.) and apply appropriate engineering analysis methodologies.
- ILO 2. Demonstrate the ability to critically analyse the engineering aspects of aerospace applications, methodologies, systems and design. Assess limitations and apply theory, simulation or experimentation to mitigate deficiencies.
- ILO 3. Demonstrate a critical judgement of their specialist subject area(s) at a level appropriate to new recruits to the aerospace industry such that they are able to contribute directly without significant further training with a knowledge and understanding of the commercial and social context in which the aerospace industry operates
- ILO 4. Be able to apply their knowledge and understanding practically to the design and analysis of aerospace projects. Monitoring and adjusting both an individual programme of work and demonstrating the ability to work as an effective team member exercising initiative appropriately.

B. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Identify a research question. Collect and analyse research data investigating new and emerging aerospace applications
- ILO 6. Develop project objectives.
- ILO 7. Select and justify methodologies appropriate to the task. Selecting engineering analysis methodologies, experimental methodologies and design processes and adapting them where necessary
- ILO 8. Plan and execute a work programme with reference to professional project management processes (e.g. time management; risk management; contingency planning; resource allocation; health and safety).
- ILO 9. Evaluate and critically analyse literature; analyse data, synthesise a discussion, generate conclusions.
- ILO 10. Place the findings of the work into the context of the work of others.
- ILO 11. Communicate findings in the form of a thesis, formal presentation and viva.

4. How is the course taught?

Students will be supported in their learning and personal development by:

Candidates are required to undertake a Group Flight Test exercise (20 credits) which is conducted in conjunction with the National Flying Laboratory Centre (NFLC), based within the School of Aerospace, Transport and Manufacturing, Cranfield University. This element of the programme involves flights in the Jetstream aircraft flying laboratory, together with conventional supporting lectures, laboratory sessions and tutorials.

The taught element of the programme (80 credits) involves a considerable degree of choice such that candidates can select the module portfolio to reflect their personal career aspirations and skills. The final MSc option – Aerodynamics or Flight Dynamics, is determined by the choice of Research thesis topic.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
N/A	N/A
ELECTIVE MODULES:	
Taught Component – a total of 60 credits taken from modules 1-18	60
TOTAL:	60

B. MSc

The accumulation of 200 credits (or more) through the assessment of taught modules and the successful completion of the thesis as detailed below:

Description	Credits
COMPULSORY MODULES:	
Flight Experimental Methods (Group Flight Test Report) (module 1)	20
Individual Research Project (module 20)	100
ELECTIVE MODULES:	
Taught Component – a total of 80 credits taken from modules 2-18	80
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months.

This course is also offered on a part-time basis. Students taking this route would instead register for a minimum of 3 years and agree with the Course Director beforehand a programme of work that meets the same minimum requirements as the full time variant, but over the longer period.

Individual modules are taught over a period of one, two or three weeks (usually, but not always arranged consecutively). The duration depends on whether the module contains 10, 20 or 30 hours of lecture contact time. These are normally arranged such that there are two hours of lectures per day, 5 days per week, with additional laboratory and/or tutorial sessions arranged during each week. Two modules would normally be offered during each week.

The formal taught part of the programme is split into two Teaching Periods each of nominally 11 weeks. A period during which formal written examinations can be scheduled follows each Teaching Period. For Masters students the remainder of the programme is devoted to the Research Thesis.

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-ASD-GFTR	Flight Experimental Methods (Group Flight Test Report)	Dr Alastair Cooke	50		20	Y		08/10/18	30/11/18	50			100 MULTI	GPRAC OR	70 30	01/11/2018	At the next available opportunity which may not be until the course runs the following year
2	N-ASD-CF	Compressible Flows	Dr Simon Prince	20		10	N		29/10/18	09/11/18	40	EX	100				01/12/2018	At the next available opportunity which may not be until the

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students following the Masters programme can expect to have 6 - 10 written examinations, 4 - 8 pieces of assessment by submitted work and 1 - 3 elements of assessment by presentation or viva. (The range in each case depends on the modules selected within the two options available). This approach has been adopted in order to assess as broad a range as possible of a candidates' skills and abilities.

This approach has been adopted in order to assess as broad a range as possible of a candidates' skills and abilities.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO 4
N-ASD-GFTR	ICW	ICW	ICW	ICW

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the

University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

Aerospace Dynamics graduates obtain employment in a wide range of industrial organisations both within Europe and worldwide. Employment is predominantly within the Aerospace Industry but increasingly graduates are in demand from the Energy, Environment and Automotive sectors.

A significant proportion of graduates go on to undertake higher degrees both in the UK and overseas.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Aerospace Manufacturing

Date of first publication/latest revision: July 2018

1. What is the course?

Course information

Course Title	MSc in Aerospace Manufacturing
Course code	MSAMFFTC, MSAMFPTC, PDAMFFTC, PDAMFPTC, PCAMFFTC, PCAMFPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace , Transport and Manufacturing
Theme	Manufacturing
Centre	Sustainable Manufacturing Systems Centre
Course Director	Dr Konstantinos Salonitis
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year, Part-time MSc - up to three years, Full-time PgDip - one year, Part-time PgDip - two years, Full-time PgCert - one year, Part-time PgCert – two years

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Course Start Month(s)	Full-time: October and March. Part-time: throughout the year

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Manufacturing Theme, Sustainable Manufacturing Systems Centre where the research interests include:

- Operations Management
- Manufacturing Systems Engineering
- Product-Service Systems
- Supply Chain Management
- Simulation and Modelling

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by Institution of Mechanical Engineers (IMechE) up to and including Academic year 2015-16**, Institution of Engineering and Technology (IET) up to and including Academic year 2015-16**, Royal Aeronautical Society (RAeS) up to and including Academic year 2015-16**.

(** Accreditation up to and including Academic year 2019-20 is awaiting review of the output of the accreditation visit).

2. What are the aims of the course?

Cranfield University offers this course in order to prepare and develop future aerospace manufacturing engineers and managers/ leaders who will be able to manage major implementation programmes or instigate interventions that deliver improvements to the performance of their aerospace manufacturing businesses.

The objectives of the course have been set to:

- Equip students with the skills necessary for aerospace manufacturing/production systems and their supply chain.
- Develop student's awareness and understanding of manufacturing strategy and operations management to address aerospace manufacturing industry problems.
- Provide students with an appreciation of manufacturing technologies, concepts and tools relevant to the aerospace manufacturing sectors.
- Develop students' transferable skills such as analytical and interpersonal skills needed for the creative and effective application of knowledge to address aerospace manufacturing issues.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- Talented UK students with a high grade BSc level.
- Ambitious high quality students with an international background.
- Mid-career professionals who want to boost their career.
- Those wishing to work nationally or internationally with aerospace manufacturing companies that need to address manufacturing systems problems.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a systematic understanding of *aerospace manufacturing functions* including manufacturing systems, supply chain management and manufacturing strategy development.
- ILO 2. Analyse different methods and techniques needed for credible aerospace manufacturing system design and improvement projects.
- ILO 3. Develop original and in-depth knowledge of aerospace manufacturing operations and critically evaluate the appropriate applications of methodologies to support them.
- ILO 4. Critically evaluate theories for the analysis and design tools and their application to (a) solve aerospace manufacturing problems in terms of technology and/or organisations and (b) increase the effectiveness of aerospace manufacturing systems.
- ILO 5. Demonstrate comprehensive knowledge of aerospace materials including metals, ceramics and composites, aerospace structures, advanced joining techniques and precision machining.
- ILO 6. Analyse and re-design aircraft assembly processes.
- ILO 7. Analyse different assessment techniques to fracture mechanics.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 8. Demonstrate the ability to apply practical and rigorous approaches to formulate projects, develop engineering solutions and evaluate their effectiveness.
- ILO 9. Assess some key project management techniques, and at the same time, demonstrate awareness of the less science-dependent aspects of technology.
- ILO 10. Demonstrate transferable skills including, personal responsibility, complex decision making and independence for further learning.
- ILO 11. Demonstrate ability to provide technical and additionally commercial leadership through planning industrial/research projects (budgets, people, tasks) and contributing to teams delivering under time pressures individually and as a team member.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 12. Synthesise a sound theoretical approach to critically evaluate data and information, undertaking a critical appraisal of technical and/or commercial literature.
- ILO 13. Propose and bring about improvements to appropriate business standards.

4. How is the course taught?

The teaching methods include lectures, case studies, group exercises, field visits, seminar and computer-based demonstrations and exercises. All students attend a week of introductory lectures (given during the first week of the course). Within this induction week, students will be introduced to personal development planning and asked to reflect on their transferable skills and to take ownership of their personal development during the course. Induction is followed by 8 weeks of assessed modules.

All MSc students will undertake a Group Project (full time students) or produce a Dissertation (part time students). The Group projects are group-based activities typically undertaken for 12 weeks between February and April (for October intake) or between August and October (for March

intake). The projects are designed to integrate knowledge, understanding and skills from the taught modules in a real-life situation. The Group Project will typically involve a team of students between 5 and 8, working to investigate a manufacturing opportunity or solve a manufacturing problem. For part-time students, a Dissertation replaces the Group Project. The topic is to be agreed between the University and the student.

All MSc students will undertake a research projects (thesis project) under the supervision of a member of academic staff. For the individual research project, each student is allocated a supervisor. Guidance sessions are provided as to what is required from the thesis and oral presentation.

In addition to the teaching methods outlined in section 3 above, students will be supported in their learning and personal development by:

- The use of Virtual Learning Environment, i.e. Blackboard
- On-demand tutorials
- Coaching throughout group project periods

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2-6	50
ELECTIVE MODULES:	
Modules 7-12 (Select 1) NOTE: for the March intake some electives may not be available	10
RECOMMENDED MODULE:	
Induction	0
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2-6	50
Group Project for full-time students (13a) or Dissertation for part-time students (13b)	40
ELECTIVE MODULES:	
Modules 7-12 (Select 3)	30

NOTE: for the March intake some electives may not be available	
RECOMMENDED MODULE:	
Induction	0
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 2-6	50
Group Project for full-time students (13a) or Dissertation for part-time students (13b)	40
Individual Research Project (14)	80
ELECTIVE MODULES:	
Modules 7-12 (Select 3)	30
NOTE: for the March intake some electives may not be available	
RECOMMENDED MODULE:	
Induction	0
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
- if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. **How is the course structured?**

Full-time students register for the course in October or March and are expected to complete the course within 12 calendar months. MSc students must successfully complete 5 core modules and 3 elective ones, the Group Project/Dissertation and an Individual Research Project.

This course is also offered on a part-time basis. In such a situation, students typically complete the various components of the course over two or three years. Typical case is to complete four taught modules plus a Dissertation in year 1 and the remainder of the modules plus the Thesis in year two and/or year 3.

Course modules

The following modules outline all parts of the programme leading to an **MSc**. Other awards associated with the course include some or all of these modules.

October Intake

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	'Residential' Start Date	'Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	I-MAN-INWK	Induction	Dr Konstantinos Salonitis	22		0	Y		01/10/18	05/10/18	N/A	AO	N/A				N/A	
2	I-MNU-A1034	Operations Management	Prof Charalampos (Harris)	32		10	Y		01/10/18	05/10/18	40	EX	100				Wc 22/10/18	Manufacturing resit exams will be during week commencing

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

¹² Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

¹³ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

¹⁴ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

¹⁵ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

¹⁶ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁷ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹⁸ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have at least two written examinations, and depending on the elective modules they undertake, between four and seven pieces of assessment by submitted work, one piece of group project work (including an assessment of personal contribution to group work), and one element assessed by a thesis and an oral presentation.

This approach has been adopted in order to perform formative and summative assessments of the students to demonstrate their ability in a range of contexts. Part time students will be assessed by dissertation in place of the group project.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO 4	ILO 5	ILO 6	ILO 7
1	Non Assessed						
2	EX	EX	EX	EX			
3	ICW	ICW	ICW	ICW			
4	ICW	ICW	ICW	ICW			
5		ICW	ICW	ICW			
6	ICW	ICW	ICW	ICW	ICW	ICW	
7		ICW			ICW	ICW	
8					ICW		
9					ICW	ICW	
10					EX		EX
11					EX		
12	EX	EX	EX	EX			

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 8	ILO 9	ILO 10	ILO 11
13a	GPRES GPROJ ICW	GPRES GPROJ ICW	GPRES GPROJ ICW	GPRES GPROJ ICW
13b	ICW	ICW	ICW	ICW

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 12	ILO 13
14	THESIS OR	THESIS OR

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by

and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

The intention of the course is to provide students with knowledge and understanding and associated transferrable skills to make a contribution to industry on graduation. Aerospace Manufacturing graduates will typically seek employment in aerospace manufacturing industry, consultancies or research institutions. Common starting roles are manufacturing engineer, industrial engineer, technical analyst, project manager and PhD researcher. With time (quicker for those with background experience) graduates progress to senior positions with significant responsibility for people, budgets and projects.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Aerospace Materials

Date of first publication/latest revision: July 2018

1. What is the course?

Course information

Course Title	MSc in Aerospace Materials
Course code	MSAMRFTC, MSAMRPTC, PDAMRFTC, PDAMRPTC, PCAMRFTC, PCAMRPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	Not Applicable
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Manufacturing
Centre	Surface Engineering & Nanotechnology Institute
Course Director	Dr Sue Impey
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s)	Full-time MSc - one year, Part-time MSc - up to three years, Full-time PgDip - one year, Part-time PgDip - two years, Full-time PgCert - one

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	year, Part-time PgCert - two years
Course Start Month(s)	Full-time: October. Part-time: October.

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Manufacturing Theme, where the materials related research interests include:

- Enhanced Composites and Advanced Structures.
- Surface Engineering and Nanotechnology.
- Welding Engineering and Laser Processing
- Precision Engineering

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by Institution of Mechanical Engineers (IMechE) up to and including Academic year 2015-16**, Institution of Engineering and Technology (IET) up to and including Academic year 2015-16**, Royal Aeronautical Society (RAeS) up to and including Academic year 2015-16**, Institute of Materials, Minerals and Mining (IOM3) up to and including Academic year 2015-16***,

(** Accreditation up to and including Academic year 2019-20 is awaiting review of the output of the accreditation visit.

*** Accreditation up to and including Academic year 2018-19 is awaiting review of the output of the accreditation visit).

2. What are the aims of the course?

AIM

The aim of the course is to provide graduate scientists and engineers with a fundamental understanding of materials properties and processing relevant for aeronautics and astronautics, and the necessary skills to apply their knowledge in aerospace engineering and related industries.

OBJECTIVES

The objectives of the course are to provide students with:

1. A scientific understanding of materials properties and an appreciation of how this understanding can be applied to problems relevant to aeronautics and astronautics.
2. An appreciation of the processes and manufacturing routes used to convert materials into engineering products, and of the influence of processing conditions on product performance.
3. An overview of a wide range of aerospace materials, including metals, polymers, ceramics and composites, and to the basic principles of materials selection for aerospace engineering.
4. An introduction to a research environment, providing familiarity with testing and processing equipment, practical approaches to problem solving, critical evaluation of data, and use of information technology.
5. The skills required to pursue a successful career in aerospace engineering and related industries.

On successful completion of the course students should be able to:

- Apply their understanding of materials properties and processing characteristics to problems in aerospace materials development, materials and process selection, and component design.
- Plan, execute and manage materials-related projects

- Operate effectively in a team
- Make effective oral and written presentations of their work.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- recent graduates wishing to extend their knowledge and skills in aerospace materials engineering
- qualified engineers wishing to apply their skills into new areas.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a critical awareness of a range of techniques for assessing the structure and properties of aerospace materials.
- ILO 2. Describe, demonstrating scientific understanding, selected processes and manufacturing routes used to convert materials into aerospace engineering products, and the influence of processing conditions on properties and performance.
- ILO 3. Discuss specific materials, their benefits and applications.
- ILO 4. Use basic principles of materials selection for aerospace engineering and other applications.
- ILO 5. Demonstrate an ability in practical approaches to problem solving.
- ILO 6. Critically evaluate data.
- ILO 7. Demonstrate a basic understanding of fracture mechanics and an awareness of approaches to failure assessment.
- ILO 8. Make effective use of finite element analysis programmes.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 9. Demonstrate an awareness of current research and development in selected topics in the field of aerospace materials engineering.
- ILO 10. Make effective oral and/or written presentation of their work.
- ILO 11. Operate effectively in a team.
- ILO 12. Undertake an appraisal of technical and/or commercial literature.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 13. Demonstrate a critical awareness of current research/development in selected topics in the field of aerospace materials.
- ILO 14. Undertake substantial critical appraisal of technical and/or commercial literature.
- ILO 15. Carry out substantial scientific programme of study.
- ILO 16. Discuss their work and relate it to the work of others.

ILO 17. Demonstrate originality in the application of knowledge in relation to an extended individual project.

ILO 18. Plan, execute and manage materials-related projects.

4. How is the course taught?

Students will be supported in their learning and personal development by:

Comprehensive course materials are provided, as well as a web-site using the Blackboard™ Virtual Learning Environment (VLE). Students are guided through the use of interactive exercises, group and individual discussion. Students engage in class activities to practise the techniques taught.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2, 3, 8	30
ELECTIVE MODULES:	
Three modules from 4-7, 9, 10* (if available) Choose three modules from six	30
RECOMMENDED MODULE	
Introduction	0
TOTAL:	60

B. **Postgraduate Diploma**

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 2-9	80
Group Project for full-time students (11a) or Dissertation for part-time students (11b)	40
ELECTIVE MODULES:	
*Optional module 10 if available for part time students, plus choose modules to total 8 from taught modules 2 to 9	
RECOMMENDED MODULE	
Introduction	0
TOTAL:	120

C. **MSc**

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 2-9	80
Group Project for full-time students (11a) or Dissertation for part-time students (11b)	40
Individual Research Project (12)	80
ELECTIVE MODULES:	
*Optional module 10 if available for part time students, plus choose modules to total 8 from taught modules 2 to 9	
RECOMMENDED MODULE	
Introduction	0
TOTAL:	200

* Module 10 is based on a short CPD course, which may or may not be available in any one academic year. Students are advised to consult with the Course Tutor about availability.

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. **How is the course structured?**

Full-time students register for the course in October and are expected to complete the course within 12 calendar months.

This course is also offered on a part-time basis. In such a situation, students typically complete the various components of the course over two or three years. A typical case is to complete four taught modules plus a Dissertation in year 1 and the remainder of the modules plus the Thesis in year two and/or year 3.

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment

												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	I-MAT-INWK	Introduction	Dr Sue Impey	26		0	Y		25/09/18	28/09/18	n/a	AO	n/a				n/a	
2	I-MAT-A1009	Introduction to Materials Engineering	Dr David Ayre	30		10	Y		01/10/18	05/10/18	40	EX	100				wc 10/12/18	September 2019
3	I-MAT-A1005	Aerospace Materials Properties and Processing	Dr Sue Impey	30		10	N		15/10/18	19/10/18	40	GCW	100				FT05/11/18 PT19/11/18	Re-assessment date to be set by agreement of Course Director and Module Leader as/when

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have at least two written examinations, and depending on the elective modules they undertake, between four and six pieces of assessment by submitted work, one piece of group project work (including an assessment of personal contribution to group work), and one element assessed by a thesis and an oral presentation.

This approach has been adopted in order to perform formative and summative assessments of the students to demonstrate their ability in a range of contexts. Part time students will be assessed by dissertation in place of the group project.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO 4	ILO 5	ILO 6	ILO 7	ILO 8
2	EX	EX	EX		EX	EX	EX	
3	GCW	GCW		GCW	GCW			
4	ICW	ICW	ICW		ICW			
5					ICW	ICW	ICW	
6	ICW	ICW	ICW					
7					ICW	ICW		ICW
8			ICW	ICW	ICW	ICW		
9		ICW	ICW	ICW	ICW			
10							ICW	ICW

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 9	ILO 10	ILO 11	ILO 12
11a	GPROJ	GPRES	GPROJ	GPROJ
11b	ICW	IPRES	ICW	ICW

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 13	ILO 14	ILO 15	ILO 16	ILO 17	ILO 18
12	THESIS OR	THESIS	THESIS	THESIS OR	THESIS R& RP	THESIS RP

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known

as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

The intention of the course is to provide students with knowledge and understanding and associated transferrable skills to make a contribution to industry on graduation. Aerospace Materials graduates will typically seek employment in the aerospace manufacturing industry, consultancies or research institutions related to the aerospace industry. However other related industries such as power generation, space, sports and automotive industries are also relevant. Common starting roles are materials engineer, design and development, project engineer, project manager and PhD researcher. With time (quicker for those with more background experience) graduates progress to senior positions with responsibility for people, budgets and projects.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Air Transport Management

Date of first publication/latest revision: February 2018

1. What is the course?

Course information

Course Title	MSc in Air Transport Management
Course code	MSATRFTC
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PgDip
Mode of delivery	Full-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Centre for Air Transport Management
Course Director	Dr Robert Mayer
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	1 st or upper 2 nd class UK honours degree or equivalent in any relevant discipline. A lower qualification plus a number of year's relevant working experience may be accepted as equivalent. For applicants whose first language is not English there is a requirement to achieve the level of 7.0 on IELTS and equivalent grades on other English language qualifications recognised by the University.
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Transport Systems Theme, Centre for Air Transport Management where the research interests include:

- Air Transport Economics
- Airline and Airport Planning and Operations
- Safety and Air Accident Investigation.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- provide a masters-level programme of learning for existing air transport managers to enhance their knowledge and skills;
- provide a masters-level programme of learning for graduates seeking to pursue a career in air transport management;
- provide the foundation necessary for graduates to go on to undertake doctoral research in air transport management.

This programme is intended for the following range of students:

- New graduates seeking to pursue a career in the air transport industry
- Practitioners in the sector, particularly at junior and middle management levels, who are seeking to expand their knowledge and skills in air transport management in order to further develop their careers.
- Practitioners who are not employed in the sector, who are seeking a career in the air transport industry.
- Both practitioners and new graduates seeking to pursue doctoral research in the area of air transport.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. MSc Air Transport Management

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate an in-depth understanding of economics and financial management relevant to air transport, air transport commercial practice and air transport operations (as they relate to both aircraft and infrastructure);
- ILO 2. Demonstrate an understanding of regulatory framework that defines the air transport industry;
- ILO 3. Demonstrate an understanding of mathematical modelling relevant to air transport management problems;
- ILO 4. Demonstrate an in-depth understanding of the complex interrelationships of technical and operational aspects of the air transport industry with the commercial pressures and realities facing its management;
- ILO 5. Analyse critically practical problems in the air transport and related industries to provide timely solutions, having regard to technical, regulatory, commercial, political, social and environmental constraints;
- ILO 6. Demonstrate originality in data collection;
- ILO 7. Undertake independent research on a subject relevant to technical, operational or commercial aspects of the air transport or related industries, including a review of relevant literature, methodological planning, data collection, analysis, presentation of results, and evaluation and discussion of these results, and the contribution made;
- ILO 8. Make effective use of electronic and hardcopy library resources;
- ILO 9. Undertake critical appraisal of literature pertaining to the technical, operational and commercial aspects of the air transport industry;
- ILO 10. Select and use appropriate analytical and decision making approaches to research and investigative air transport management problems;
- ILO 11. Make effective oral and written presentations of their work;
- ILO 12. Work effectively to set deadlines;
- ILO 13. Demonstrate the ability to work within teams and possess an understanding and appreciation of the contributions made by other specialists;
- ILO 14. Undertake and successfully complete a substantial programme of research independently, applying robust methods of data collection and analysis, and communicating the findings coherently.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- lectures and workshops delivered by industry practitioners, demonstrating the application of theory to various examples and case studies;
- training on how to use the library's on-campus and on-line resources undertaken by a Cranfield University librarian;
- training on how to use the OAG airline schedule database.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 4, 5, 6, 8, 12	90
Group Project (13)	20
ELECTIVE MODULES:	
Modules 7, 9, 10, 11 (Choose One)	10
TOTAL:	120

B. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 4, 5, 6, 8, 12	90
Group Project (13)	20
Individual Research Project (14)	80
ELECTIVE MODULES:	
Modules 7, 9, 10, 11 (Choose One)	10
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 11 calendar months.

Teaching is delivered in one week modules. In the first teaching period, students will have completed five modules. During teaching period two students complete the remaining modules. Students complete a group project which starts mid-April and concludes just before May. Students are required to submit a thesis proposal by the end of January. The thesis is handed-in at the beginning of August. Oral examinations are held in early September.

Students are typically granted four weeks to complete course work. Exams are scheduled in December (before Christmas). Students are required to contribute to a report for their group projects and to participate in a group presentation. Once students have handed in their thesis, students must deliver a presentation summarising their thesis and be cross-examined on this presentation as part of their thesis viva.

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-ATF-IAT10	Introduction to the Air Transport Industry	Mr Andy Foster	25		10	Y	08/10/18	08/10/18	12/10/18	40	ICW	100				12/11/18	07/05/19
2	N-ATF-TEF10	Air Transport Economics and Finance	Dr Robert Mayer	50		20	N	29/10/18	29/10/18	09/11/18	40 40	GPRES EX	40 60				09/11/18 Wk 1	07/05/19
3	N-ATF-RPA10	Regulatory Policy and Air Law	Dr Keith Mason	25		10	Y	15/10/18	15/10/18	26/10/18	40	EX	100				26/10/18	07/05/19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The course uses a range of assessment types. Students can expect to have two written examinations, ten pieces of assessment by submitted work and two elements of assessment by presentation or viva.

Students are subject to two forms of assessment with regard to the group project. Firstly, they must submit group coursework and secondly, their group project oral presentation is also assessed. In the latter form of assessment, each presentation is judged on how well their presentation is organised, the quality of their individual presentations and visual aids and how well they are able to answer questions from the audience. Both forms of assessment have an equal weighting with regard to the module mark.

The thesis is assessed using a combination of their written work and an oral presentation. The oral presentation provides an opportunity for each student to present their thesis to members of staff. These oral presentations are judged on the basis of the quality of the presentation in terms of content and visual aids, how well the key findings and other important elements of the research been communicated and how well the student has responded to questions from the audience.

This approach has been adopted in order to ensure that students achieve the intended learning outcomes.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Graduates from this course will be well prepared for employment in the field of air transport management. The MSc Air Transport Management is designed to equip students with the skills required to pursue a successful career in various sectors of the air transport industry, including, but not restricted to, airlines, airport companies and authorities, civil aviation departments, air transport consultancies and aerospace companies. Cranfield students are also well prepared to undertake research leading to the award of a PhD.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

PROGRAMME TITLE: Aviation Management (Executive) Programme

Date of first publication/latest revision: March 2018

1. What is the course?

Course information

Course Title	MSc in Air Transport Management (Executive) – <i>Cranfield</i> MSc in Air Transport Management (Executive) - <i>Singapore</i> MSc in Air Transport Management (Executive) - <i>Muscat</i>
Course code	MSATRPTC, PDATRPTC – Air Transport Management (Executive) – <i>Cranfield</i> MSATSPTC – MSc in Air Transport Management (Executive) - <i>Singapore</i> MSATOFTC, MSATOPTC – MSc in Air Transport Management (Executive) - <i>Muscat</i> PCAVMPTC - PgCert in Aviation Management
Academic Year	2018/19
Valid entry routes	MSc in Air Transport Management (Executive) – <i>Cranfield</i> MSc in Air Transport Management (Executive) - <i>Singapore</i> MSc in Air Transport Management (Executive) - <i>Muscat</i> PgDip in Air Transport Management PgCert in Aviation Management
Additional exit routes	PgDip in Air Transport Management PgCert in Aviation Management
Mode of delivery	Cranfield / Singapore - Part-time, Distance Muscat - Full-time / Part-time
Location(s)¹ of Study	Cranfield University / Singapore Aviation Academy / Muscat University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Centre for Air Transport Management
Course Director	Dr Robert Mayer
Awarding Body	Cranfield University
Is this an AP Contract	No

¹ If any part of this course is delivered at another site, please note which one(s) here

course?²	
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	1 st or upper 2 nd class UK honours degree or equivalent in any relevant discipline. A recognised professional qualification plus a number of years relevant working experience may be accepted as equivalent. For applicants whose first language is not English there is a requirement to achieve the level of 7.0 on IELTS and equivalent grades on other English language qualifications recognised by the University.
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Part-time MSc – up to three years, Part-time PgDip – two years, Part-time PgCert – two years Full-time MSc (Muscat only) – one year
Course Start Month(s)	July (Cranfield) / September (Singapore) / September (Muscat)

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Transport Systems Theme, Centre for Air Transport Management where the research interests include:

- Air Transport Management
- Airline and Airport Planning and Operations
- Safety and Air Accident Investigation

Cranfield University interacts with the following institutions and in the following ways:

Teaching and assessment is also provided by the School of Management.

Teaching and assessment for the course in Singapore is primarily (but not completely) held at the Singapore Aviation Academy (SAA). The SAA provides the infrastructure and is involved in marketing the course while teaching and assessment is solely the responsibility of Cranfield University.

Teaching and assessment for the course in Muscat is primarily (but not completely) held at Muscat University. Fly-in Cranfield faculty provide over 60% of the teaching in Muscat (as per the MoU). Muscat University provides the infrastructure and is involved in marketing the course whilst the majority of the teaching and all the assessment is the responsibility of Cranfield University.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course in order to:

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

- Provide a part-time masters-level programme of learning for individuals either working in the air transport, airport or related industries to develop and enhance their skills in air transport management offering a mode of study that enables them to combine study with work commitments;
- Provide a part-time masters-level programme of learning to meet the management training needs of existing air transport companies, airport operators, suppliers, aviation and planning consultants and government regulators offering a mode of study that allows their employees to combine study with work commitment.
- Provide a flexible model of delivery that enables students in Muscat to complete the degree in an accelerated manner in one year.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) entrance routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- Practitioners in the air transport industry, particularly at middle management level, who are seeking to expand their knowledge and skills in air transport management in order to further develop their careers.
- Practitioners in the related sectors who are seeking to gain an in-depth understanding of the air transport industry.
- Practitioners seeking to pursue doctoral research in air transport management.

Please note that the courses in this programme differ from the full-time MSc in Air Transport Management (Cranfield) variant also offered.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Aviation Management

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Describe and critique the regulatory frame that defines the air transport industry, detail the fundamental elements (and the application to current problems in) airline and airport business management and air transport economics and financial management;
- ILO 2. Make critical appraisal of literature pertaining to the technical, operational and commercial aspects of the air transport industry, and identify, evaluate and apply appropriate statistical and research strategies in industrial and academic research and analysis;
- ILO 3. Summarise and critically analyse the concepts of personal/professional development and leadership and demonstrate their application to self and work;
- ILO 4. Demonstrate the ability to work within teams and possess an understanding and appreciation of the contributions made by other specialists, working effectively to set deadlines and to make effective oral and written presentations of their work.

B. Postgraduate Diploma in Air Transport Management

In addition to the intended learning outcomes outlined for the Postgraduate Certificate, a diligent student would also be expected to:

- ILO 5. Analyse critically practical problems in the air transport and related industries to provide timely solutions, having regard to technical, regulatory, commercial, political, social and environmental constraints;

- ILO 6. Evaluate the complex interrelationships of technical and operational aspects of the air transport industry with the commercial pressures and realities facing its management;
- ILO 7. Undertake group research on a subject relevant to technical, operational or commercial aspects of the air transport or related industries, including a review of relevant literature, methodological planning, data collection, data analysis, presentation of results, and evaluation and discussion of the results, and the contribution made.

C. Executive MSc in Air Transport Management / Executive MSc in Air Transport Management (Singapore) / Executive MSc in Air Transport Management (Muscat)

In addition to the intended learning outcomes outlined for the Postgraduate Diploma, a diligent student would also be expected to:

- ILO 8. Formulate research questions, develop aims and objectives for completing the research task. Conduct a literature review and present it in an appropriate style. Critically assess different methodologies and select an appropriate one to test hypotheses, collecting primary and/or secondary data and using appropriate analytical techniques, whilst understanding potential biases that may influence researchers and methods to limit such occurrences;

Prepare a scientific thesis and present results based upon the techniques listed above and be able to defend the thesis orally.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Lectures and workshops delivered by industry practitioners, demonstrating the application of theory to various examples and case studies;
- Training on how to use the library's online resources and bibliographical software undertaken by a Cranfield University librarian;
- Workshops on thesis development and progression.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate in Aviation Management

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1-6	60
ELECTIVE MODULES:	

None	
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1-6	60
Group Project (22)	20
ELECTIVE MODULES:	
40 credits from Modules 7-21	40
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

MSc in Air Transport Management (Executive) - Cranfield / MSc in Air Transport Management (Executive) - Singapore

Description	Credits
COMPULSORY MODULES:	
Modules 1-6	60
Group Project (22) Individual Research Project (23)	20 80
ELECTIVE MODULES:	
40 credits from Modules 7-21 (Modules 7-17 only run at Cranfield on Singapore variant)	40
TOTAL:	200

MSc in Air Transport Management (Executive) - Muscat

Description	Credits
COMPULSORY MODULES:	
Modules 1-6	60
Group Project (22)	20
Individual Research Project (23)	80
ELECTIVE MODULES:	
40 credits from Modules 7-17 (Modules 8, 11-12 and 14-17 only run at Cranfield on Muscat variant) (Modules 18-21 not available on Muscat variant)	40
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Part-time students register for the course in July in Cranfield or September in Singapore and are expected to complete the course within 3 years. Muscat based students register for the course in September and can complete the degree in an accelerated study programme within 1 year.

The majority of modules will be run over a three or four day period. In addition to the standard 10 credit modules, the course offers four modules each carrying 5 credits. These 5 credit modules will be delivered on a distance learning basis, supported by interactive e-learning technologies. (Please Note: distance learning modules are available to Cranfield and Singapore students only). Providing these 5 credit modules is a key part of our commitment to facilitating flexible learning. It also reflects the market demand for these subject areas as well as the growing expertise of faculty

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of $< 40\%$ (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

members. Students may choose no more than two 5 credit modules. With an exceptionally wide portfolio of optional modules, we provide our students with opportunity to tailor the programme to their specific needs and interests, accelerating to a senior management role.

In addition to the optional modules, PgDip students are required to complete a 20 credit supervised group project. This element has consistently proved to be a source of positive feedback (from our students, external examiners and industrial advisory boards) in the full-time version of this course and we want it to be a similarly successful addition to this executive course. The group project will be launched early at the end of the core modules to give students plenty of time to develop and discuss their plans and to carry out background research in advance of coming to Cranfield or in Singapore for a week of intensive group work.

As for the PgDip route, in addition, MSc students are required to complete a supervised thesis on a subject of their choice within the field of air transport management. The research is expected to go into much greater depth than that required for the PgDip.

Singapore and Muscat students will be able to complete their entire course in Singapore or Muscat (respectively), or may take the opportunity to select some optional modules that are delivered only at Cranfield. If students at Cranfield, Singapore or Muscat cannot attend a particular module in their registered location, they are able to attend at one of the other locations.

The following modules are only delivered at Cranfield;

- Crisis Management and Business Continuity
- Regulatory Policy and Air Law
- Air Transport Environmental Planning
- Air Transport Engineering
-
- Airport Strategic Planning
- Aviation Safety Management
- Airport Design

The following modules are delivered by Distance Learning (for Cranfield and Singapore students only);

-
- Air Transport in Remote Regions
- The Business Travel Market
- Aviation Marketing
- Contemporary Airport Design

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

MSc in Air Transport Management (Executive) - Cranfield

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment		Submission dates		
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments % (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-AEX-TALB Occ A	The Airline Business	Dr Keith Mason	20		10	Y	25/06/18	25/06/18	27/06/18	40 40	MULTI		100	ICW ICW	30 70	27/06/18 28/08/18	At the next available opportunity which may not be until the course runs

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

¹² Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

¹³ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

¹⁴ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

¹⁵ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

¹⁶ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁷ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹⁸ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ²¹ - 40% or 50%	Independent Assessment		Multi-part Assessment		Submission dates		
												Type of Assessment	Weighting within module ²² (%) of Independent assessments	Weighting within module of multi-part assessments ²³ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ²⁴	Assessment Submission and/or exam date ²⁵	Assessment / Exam Retake date
1	N-AEX-TALB Occ C	The Airline Business	Dr Keith Mason	20		10	Y	16/09/18	16/09/18	20/09/18	40 40	MULTI		100	IC W IC W	30 70	20/09/18 19/11/18	At the next available opportunity which may not be until the course runs the following year

¹⁹ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

²⁰ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

²¹ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

²² For **independent assessments** please record type and weighting of each separate piece of assessment individually.

²³ For **multi-part assessments** please record the overall weighting of module which should be 100%.

²⁴ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

²⁵ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The course uses a range of assessment types. Overall, the programme has **three** distinct but interrelated elements: the taught modules, a group project, and an individual research project.

The group project is assessed by a group oral presentation and a written report; individual contribution will be taken into account as well.

The individual research project is assessed by consideration of the written thesis submission and an oral presentation on the research findings.

Taught modules will include assessment by coursework and examination. Whilst we expect to focus on traditional assignments and exams for summative assessment of learning in year one, coursework assessment can also include:

- Online tests
- Oral presentations in class
- In-class quizzes/tests
- In-class or remote group work

We continue to consider our strategy in this regard for the optional modules in year two. Module assignments are set to be challenging and to encourage the student to study the module topic areas in more depth. The objectives of the assignments are for the students to:

- Acquire the skill to efficiently search literature
- Acquire an in-depth knowledge of contemporary air transport management issues
- Apply skills and knowledge to solve specific problems
- Develop the capability to critically analyse data
- Compile succinct and informative reports to a high standard
- Formulate responses to specific questions against a time limit

This approach has been adopted in order to facilitate the completion of the course by part-time students, often from abroad, without the need to return only for examinations. However, two modules will be examined at Cranfield and it is our intention to combine this with a scheduled visit to attend other taught modules. For those continuing to MSc level, a thesis based on the individual research project has to be presented at the end of the registration period and must

demonstrate competency in literature review, methodology, data analysis, conclusion forming and presentation. Students will also be asked to give a formal oral presentation on their research findings.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

(nb – common to MSc Air Transport Management (Executive) – Cranfield / MSc Air Transport Management (Executive) – Singapore / MSc Air Transport Management (Executive) - Muscat)

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

(nb – common to MSc Air Transport Management (Executive) – Cranfield / MSc Air Transport Management (Executive) – Singapore / MSc Air Transport Management (Executive) - Muscat)

Award ILOs Module No.	ILO8	ILO9
23) N-AEX-THS	THESIS	THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10

(Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

Students taking the Air Transport Management course will be equipped with the skills required to either enhance their present career or to allow them to pursue a new career path with airlines, airport authorities, civil aviation departments, air transport consultancies or aerospace companies.

Cranfield students are also well prepared to undertake research leading to the award of a PhD.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Aircraft Engineering

Date of first publication/latest revision: February 2018

1. What is the course?

Course information

Course Title	MSc in Aircraft Engineering
Course code	MSAENPTC, PDAENPTC, PCAENPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	Not Applicable
Mode of delivery	Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Aeronautics
Course Director	Dr Wenli Liu
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Part-time MSc - up to three years, Part-time PgDip - two years, Part-time PgCert - two years

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Course Start Month(s)	February

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Aeronautics where the research interests include:

- A wide range of aerospace design topics, from conceptual to detail design of civil, military and Uninhabited Aerial Vehicles. It is also leading research into advanced technologies, such as laminar flow, avionics, more electric aircraft and advanced metallic and composite airframe structures.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by Royal Aeronautical Society (RAeS) and Institution of Mechanical Engineers (IMechE). Current accreditation is for intake years 2015 up to and including 2019.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- To educate and train engineers to acquire and then exercise a broad range of design and manufacturing skills, knowledge and business awareness of the aircraft design cycle.
- To apply the knowledge that has been acquired to a group project, and to develop team working and management skills through the project work.
- To develop research skills and independent learning through the individual research project.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- Aerospace Engineers working in the aerospace industry who wish to broaden their knowledge of aircraft engineering for career development in technical, leadership and integration roles.
- Aerospace Engineers working towards chartered engineer status.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a critical understanding of the aircraft development lifecycle and the major disciplines of aircraft engineering.
- ILO 2. Apply their acquired knowledge of aircraft engineering to solve real world aircraft design and manufacturing problems.

- ILO 3. Effectively use computer based tools (such as Computer Aided Design) to support design tasks.
- ILO 4. Select appropriate technologies and methodologies to suit particular projects.
- ILO 5. Critically evaluate current design and analysis techniques and where appropriate adapt them to new applications.
- ILO 6. Use a variety of information sources including networked information sources.
- ILO 7. Clearly present results and conclusions both orally and in writing.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 8. Plan and execute a complex multi-disciplinary design task as part of a team.
- ILO 9. Work effectively as a member of a multi-disciplinary team.
- ILO 10. Make informed judgements in the absence of complete data.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 11. Undertake independent research on subjects relevant to aircraft engineering and demonstrate originality in the application of knowledge.
- ILO 12. Demonstrate self-direction and originality in solving aircraft engineering problems.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Support from GDP chairman and industrial co-chair (MSc and PgDip only).
- Informal teaching support from module lecturers related to taught course material.
- Informal and pastoral support from the Course Director.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-3	30

ELECTIVE MODULES:	
Any three modules chosen from: 4-15	30
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-3	30
Group Design Project: 16	60
ELECTIVE MODULES:	
Any three modules chosen from: 4-15	30
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-5	50
Group Design Project: 16	60
Individual Research Project: 17	70
ELECTIVE MODULES:	
Any two modules chosen from: 6-15	20
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Part-time students register for the course in February and are expected to complete the course within 3 years for MSc, 24 months for PgDip and 18 months for PgCert.

The majority of the modules are taught over one week residential at Cranfield University. Some modules are taught over two weeks.

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-AEN-IAVD	Introduction and Initial Aerospace Vehicle Design	Prof Howard Smith	40		10	N		04/02/19	15/02/19	40	ICW	100				12/04/19	At the next available opportunity which may not be until the course runs the following year
2	N-AEN-TIPD	Tools for Integrated Product Development	Dr Adrian Clarke	25		10	N		17/06/19	21/06/19	40	ICW	100				16/08/19	At the next available opportunity which may not be until the

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. **How are the ILOs assessed?**

The following assessment types are utilised:

- The course uses a range of assessment types. Students can expect to have 1-3 written examinations, 4-7 post module assignments, 2 elements of assessment by presentation or viva and two written theses (group design project and individual research project).

This approach has been adopted in order to provide a range of assessment methods appropriate to develop skills and be of relevance to the taught materials.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

Award ILOs	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8	ILO9	ILO10	ILO11	ILO12

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review. For collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focussed Review which looks at each course in depth. In addition occasional site inspection visits are made.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

9. What opportunities are graduates likely to have on completing the course?

Most delegates on the course are already working in the Aerospace industry when they join the course. The course can aid career progression into technical, integration and leadership roles, and support career change to aerospace from other engineering/ physical science disciplines.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Airport Planning and Management

Date of first publication/latest revision: February 2018

1. What is the course?

Course information

Course Title	MSc in Airport Planning and Management
Course code	MSAPMFTC
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PgDip
Mode of delivery	Full-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Centre for Air Transport Management
Course Director	Dr Thomas Budd
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	1 st or upper 2 nd class UK honours degree (or non-UK equivalent) in any discipline. A recognised professional qualification plus a number of years' relevant working experience may be accepted as equivalent. For applicants whose first language is not English there is a requirement to achieve the level of 7.0 on IELTS and equivalent grades on other English language qualifications recognised by the University.
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Transport Systems Theme, Centre for Air Transport Management where the research interests include:

- Air Transport Economics
- Airline and Airport Planning and Operations
- Safety and Air Accident Investigation

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by the Chartered Institute of Logistics and Transport in the UK until September 2021.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- provide a masters-level programme of learning for existing airport managers to enhance their skills in airport planning and management;
- provide a masters-level programme of learning for graduates seeking to pursue a career in airport planning and management;
- provide a masters-level programme of learning to meet the management training needs of existing airport operators and planning consultants;
- provide the foundation necessary for graduates to undertake doctoral research in airport planning and management.

This programme is intended for the following range of students:

- New graduates seeking to pursue a career in airport planning and management;
- Practitioners in the sector, particularly at junior and middle management levels, who are seeking to expand their knowledge and skills in airport planning and management in order to further develop their careers;
- Practitioners who are not employed in the airport or related sector, who are seeking a career in airport planning and management;
- Both practitioners and new graduates seeking to pursue doctoral research in airport planning and management.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. MSc

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a systematic understanding of relevant international and national regulations and explain their effects on airport business, planning, design, operations and safety management decisions;
- ILO 2. Demonstrate a critical awareness of the key issues that affect users of airport facilities (e.g. airlines and retailers) and explain how their commercial pressures, strategic decisions and priorities impact on airport business, planning, design, operations and safety management decisions;
- ILO 3. Identify, analyse and design solutions in order to address a given research problem within the context of airport planning and management, having regard to regulatory constraints and commercial and environmental imperatives;
- ILO 4. Collaborate and contribute effectively to a group project, and communicating the findings of this exercise coherently to academics and other practitioners;
- ILO 5. Collect information from a variety of electronic (internet) and hard copy sources to support a research project;
- ILO 6. Appraise and critique the work of other practitioners and specialists;
- ILO 7. Communicate effectively, both orally and in written form, research work produced to both practitioner and academic audiences;
- ILO 8. Take responsibility for research produced, including, efficient time management, working to set deadlines and targets, demonstrating self-discipline, creative thinking and critical reflections of their own performance;
- ILO 9. Undertake and successfully complete a substantial programme of research independently, applying robust methods of data collection and analysis, and communicating the findings coherently.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- lectures and workshops delivered by industry practitioners, demonstrating the application of theory to various examples and case studies;
- training on how to use the library's on-campus and on-line resources undertaken by a Cranfield University librarian;
- training on how to use the OAG airline schedule database;
- a four-day workshop designed to enable students to develop a working competency in the use of CAST airport passenger terminal design software.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1 to 9	100
Group project (10)	20
ELECTIVE MODULES:	
n/a	
TOTAL:	120

B. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules 1 to 9	100
Group project (10)	20
Individual Research Project (11)	80
ELECTIVE MODULES:	
n/a	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 11 calendar months.

Teaching is delivered in one week modules (with the exception of Research Methods and Statistics which is taught over a week and a half). In the first teaching period, students will have completed five modules. During teaching period two, students complete the remaining modules. Students complete a three week group project which concludes just after the Easter break. Students are required to submit a thesis proposal by the end of January. The thesis is handed-in at the beginning of August. Thesis oral examinations are held in early September.

Students are typically granted four weeks to complete course work. Students are required to contribute to a report for their group projects and to participate in a group presentation. Following handing in their thesis, students must deliver a presentation summarising their thesis and be cross-examined on this presentation as part of their thesis viva.

student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	ssessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-ATF-IAT10	Introduction to the Air Transport Industry	Mr Andy Foster	25		10	Y	08/10/18	08/10/18	12/10/18	40	ICW	100				12/11/18	07/05/19
2	N-APM-APO10	Airport Operations	Mr Richard Moxon	30		10	Y	29/10/18	29/10/18	02/11/18	40	ICW	100				03/12/18	07/05/19
3	N-APM-FBM10	Airport Finance and Business Management	Dr Romano Pagliari	50		20	N	12/11/18	12/11/18	23/11/18	40 40 40	EX ICW GPRES	45 45 10				Wk 1 07/01/19 23/11/18	07/05/19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment

7. How are the ILOs assessed?

The following assessment types are utilised:

Students will be required to complete one form of assessment for each module. There are nine taught modules under the current structure, seven of which have one point of assessment (six modules assessed by Individual Coursework and one by Examination). The remaining two modules are assessed by a mix of Individual Coursework/Group Presentations/Examination/Individual Project.

Students are subject to two forms of assessment with regard to the group project. Firstly, they must submit group coursework and secondly, their group project oral presentation is also assessed. In the latter form of assessment, each presentation is judged on how well their presentation is organised, the quality of their individual presentations and visual aids and how well they are able to answer questions from the audience. Both forms of assessment have an equal weighting with regard to the module mark.

The thesis is assessed using a combination of their written work and an oral presentation. The oral presentation provides an opportunity for each student to present their thesis to members of

staff. These oral presentations are judged on the basis of the quality of the presentation in terms of content and visual aids, how well the key findings and other important elements of the research been communicated and how well the student has responded to questions from the audience.

This approach has been adopted in order to ensure that students achieve the intended learning outcomes set out in Section 3.

Assessment and ILO Mapping

A. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO4	ILO 5	ILO 6	ILO 7	ILO 8	ILO 9
1	ICW					ICW		ICW	
2	ICW					ICW		ICW	
3	EX ICW GPRES	EX ICW GPRES	EX ICW GPRES			EX ICW GPRES		EX ICW GPRES	
4	EX							EX	
5					ICW			ICW

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of

professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10:

Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Graduates from this course will be well prepared for employment in the field of airport planning and management. Opportunities for employment will exist in the planning departments of airport authorities or as a planner in one of airport management and planning consultancies that are involved in various airport development projects worldwide. Opportunities are also possible within regulatory organisations both in the UK and worldwide as well as with various other suppliers that have B2B relationships with the airport sector such as IT companies, airlines and aircraft manufacturers. Cranfield students are also well prepared to undertake research leading to the award of a PhD.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Airworthiness

Date of first publication/latest revision: May 2018

1. What is the course?

Course information

Course Title	MSc in Airworthiness
Course code	MSAWOPTC, PDAWOPTC, PCAWOPTC
Academic Year	2018-19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip and PgCert
Mode of delivery	Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Centre for Safety and Accident Investigation
Course Director	Cengiz Turkoglu
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Part-time MSc - up to three years, Part-time PgDip - up to three years, Part-time PgCert - two years,
Course Start Month(s)	September or February ³

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

³ In exceptional cases, the applicants may start the course by attending another module other than September or February and this will be agreed at the Course and Programme Director's discretion

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Transport Systems Theme, Centre for Safety and Accident Investigation where the research interests include:

- Aviation Safety
- Reliability
- Aircraft Maintenance
- Risk Management

Industrial visits and technical experts from external institutions play a large part in the course.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by the Institution of Mechanical Engineers (IMechE) and the Royal Aeronautical Society (RAeS) until September 2019 intake. Their statement reads "The accredited MSc programme has met the academic requirements (of the Engineering Council) for Further Learning for registration as a Chartered Engineer (CEng) by both the Institution of Mechanical Engineers and the Royal Aeronautical Society. For students with an accredited first degree, this satisfies the requirements of the educational base for CEng registration."

2. What are the aims of the course?

Cranfield University offers this course in order to provide a wide spectrum of technical knowledge in the context of the related regulatory and safety issues. This is a background that managers in today's aerospace industry must possess. A detailed knowledge of airworthiness issues early in the development stage of a product's design, modification, repair or process helps the downstream business operation and enables a better balance to be struck between cost and safety. Specifically, the course aims to:

- Provide a globally unique course that relates the regulatory background to the technology concerned in the design, production and maintenance of aircraft – the airworthiness issues.
- Establish a centre of excellence that delivers a high technology Masters programme in airworthiness.
- Promote relevant research and development activity in airworthiness within Cranfield University, industry and government agencies.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) entry and exit routes are provided for students who wish to access only parts of the course provided. It is also suggested that the latter two qualifications may be more appropriate for engineers in the aviation industry who have no need for a separate research project (thesis).

This programme is intended for the following range of students:

- Graduate engineers from airlines
- Licensed engineers in aviation industry (PgCert / PgDip possibly extending to MSc)
- Airworthiness engineers working in manufacturing, maintenance and/or operations

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate an understanding of major issues surrounding the design and performance of complex aircraft, engine, their components and associated equipment used in aviation at a level appropriate to airworthiness requirements;
- ILO 2. Describe and detail the organisation and nature of airworthiness requirements covering aircraft design, manufacture and maintenance;
- ILO 3. Develop an awareness of the analytical, diagnostic and practical skills required for safe operation of aircraft, engines and their components;
- ILO 4. Work both independently and as a member of a team towards the solution of complex safety related engineering problems;
- ILO 5. Use transferable skills developed through team work, communication and problem-solving to enhance their careers in engineering and technical management;
- ILO 6. Understand the roles and significance of compliance, substantiation, validation, certification and approval in the demonstration of airworthiness;
- ILO 7. Be cognisant of the application of the studied technologies in other fields besides aerospace.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 8. Access and apply the relevant specific requirements in an appropriate way within the technology areas covered by the course and relate the technology to the requirements in such a way that sound engineering judgements can be made.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 9. Undertake independent research on a topic relevant to airworthiness and safety in aircraft or engine design, manufacture or maintenance utilising the techniques of literature review, data gathering, analysis, results evaluation, and presentation both written and oral.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Lectures from external speakers with expertise in particular aspects of the course;
- Access to library resources;
- Use of class exercises (e.g. group work in AW02, Safety Assessment of Aircraft Systems) to help develop knowledge and techniques;
- Conducting individual research project in a commercial or research organisation to provide a 'real life' environment.

5. How is the course structured?

This course is ONLY offered on a part-time basis. Students should register and start the course in September and are expected to complete the course within three years. The taught phase of a 10 credit module lasts one week, two weeks for a 20 credit module, and it should be noted that most modules are held just once per year.

All MSc and PgDip students must complete the following mandatory modules as part of the course. Students must accumulate an additional 30 credits through the selection of three optional modules in line with their interests.

Module number	Mandatory Modules
1	Airworthiness Fundamentals* (Previously known as AW00)
2	Aircraft Fatigue & Damage Tolerance (Previously known as AW01)
3	Safety Assessment of Aircraft Systems (Previously known as AW02)
4	Gas Turbine Fundamentals (Previously known as AW03)
12	Air Transport Engineering - Maintenance Operations (Previously known as AW17)
16	Aviation Safety Management (Previously known as AW22)
17	Airframe Systems (Previously known as AW23)
20	Airworthiness Dossier (Previously known as AWD)
21	Individual Research Project (Previously known as AWR) - MSc only

Module Number	Optional Modules
5	Mechanical Integrity of Gas Turbines (previously known as AW05)
6	Detail Stressing (previously known as AW06)
7	Practical Reliability (previously known as AW09)
8	Aircraft Accident Investigation & Response (previously known as AW10)
9	Fundamentals of Aircraft Engine Controls (previously known as AW12)
10	Fundamentals of Aerodynamics (previously known AW13)
11	Manufacturing (previously known AW15)
13	Flight Experimental Methods (Airworthiness) (known as AW18-19)
14	Design, Durability & Integrity of Composite Aircraft Structures (previously known as AW20)
15	Introduction to Avionics (Previously known as AW21)
18	Introduction to Aircraft Structural Crashworthiness (previously known as AW24)
19	Human Factors in Aviation Maintenance (previously known as AW25)

PgCert students must complete Modules 1, 3, 12 and 16 and further two elective modules from those permitted in the table from Section 5A to make up 20 credits. There is no requirement to complete mandatory modules before taking optional modules.

6. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1*, 3, 12 and 16 [Previously known as AW00, AW02, AW17 ⁴ , AW22]	40
ELECTIVE MODULES:	
20 credits selected from Modules: 2, 4-11, 14-15, 17-19	20 (10 credits per module)
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1*, 2, 3, 4, 12, 16, 17 ⁴ [Previously known as AW00, AW01, AW02, AW03, AW17, AW22, AW23] AWD Airworthiness Dossier: 20	70 20
ELECTIVE MODULES:	
30 credits selected from Modules: 5-11, 13-15, 18-19	30 (10 credits per module except for Module 13 which is 20 credits)
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1, 2, 3, 4, 12, 16, 17 ⁴ [Previously known as AW00, AW01, AW02, AW03, AW17, AW22, AW23] AWD Airworthiness Dossier: 20 Individual Research Project: 21	70 20 80
ELECTIVE MODULES:	

* Module MAA03 Airworthiness of Military Aircraft (at Shrivenham) may be claimed as equivalent.

⁴Module MAA15 Military Aircraft Systems (at Shrivenham) may be claimed as equivalent. Please note the additional security clearance requirements for courses delivered at Shrivenham, which is a Ministry of Defence (MOD) site. All applicants to courses that are wholly or partially delivered at Shrivenham must complete the BPSS (HMG Baseline Personnel Security Standard V4 April 2014) prior to registration on the course or must already hold a security clearance to this level or higher.

Any other modules selected from Modules: 5-11, 13-15, 18-19 to the value of 30 credits	30 (10 credits per module except for Module 13 which is 20 credits)
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{5 6}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

⁵ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁶ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁷	Total hours delivered by Visiting Lecturers ⁸	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁹ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ¹⁰ (%) of Independent assessments	Weighting within module of multi-part assessments ¹¹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹²	Assessment Submission and/or exam date ¹³	Assessment / Exam Retake date
1	N-AW-AW	Airworthiness Fundamentals*	Dr S Place	30	10	10	N	10/09/18	10/09/18	14/09/18	40			100	EX ICW	30 70	14/09/18 12/11/18	At the next available opportunity which may not be until the module runs the following year

⁷ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁸ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁹ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

¹⁰ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

¹¹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹² Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹³ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

* **Module MAA03 Airworthiness of Military Aircraft (at Shrivenham) R-MAA-AMA may be claimed as equivalent.**

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The MSc in Airworthiness has **two** distinct but interrelated elements: the taught modules (which includes the Course Dossier) and the thesis (Individual Research Project). All modules are assessed by written assignments and (in the case of the thesis) an oral examination, or viva. Short examinations are used on certain modules.

The Post-Modular Assignments are set to be challenging and to promote the student to study the module topic areas in more depth, in particular the relationship of the regulations to the technology issues. The objectives of the assignments are for the students to:

- Acquire the skill to efficiently search literature
- Acquire an in-depth knowledge of Airworthiness regulations
- Apply skills and knowledge to assess the regulatory aspects of a particular technology

- Develop the power to critically analyse data
- Compile succinct and informative reports to a high standard
- Formulate responses to specific questions against a time limit

This approach has been adopted in order to facilitate the completion of the course by external (part-time) students, often from abroad, without the need to return for examinations.

Over the duration of the course each MSc/PgDip student will be asked to complete an Airworthiness Dossier, containing a range of documentation related to each module taken. The dossier is an “Integrative Assessment”, which brings together the airworthiness theme of the course, over all taught modules.

This will include relevant airworthiness regulatory and guidance material, published papers, case studies etc. Its preparation will lead students to research each module topic in more depth, building both on the information taught in formal lectures and the material gleaned from the pre-module reading and post-module assignments. The objectives of the dossier are for the students to:

- Obtain and retain an in-depth knowledge of airworthiness regulations and guidance material
- Acquire skills in data gathering and literature searching
- Demonstrate an overall knowledge of the technology of the modules taken
- Demonstrate information organisational and presentational skills

The dossier is to provide a summary of the whole course with a focus on airworthiness and technology issues, showing the linkage between the two. It is up to each student to decide which lectures are fundamental to their interests and airworthiness/safety and select them for inclusion. This will vary from module to module but should cover a representative number of lectures in addition to key references found in background reading and assignment work.

Assessment of the Course Dossier will be undertaken when all taught modules have been completed. However, students should take the opportunity to review it with a course supervisor at an early stage, and also mid-way through the course.

This approach has been adopted because this is the best means to assess the wide-ranging set of subjects.

Assessment and ILO Mapping

A. Postgraduate Certificate

Award ILOs	ILO 1	ILO 2	ILO 3	ILO 4	ILO 5	ILO 6	ILO 7
Module No.							
1 - 12	ICW	ICW	ICW	ICW	ICW	ICW	ICW
14 - 19	ICW	ICW	ICW	ICW	ICW	ICW	ICW

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO 4	ILO 5	ILO 6	ILO 7	ILO 8
1-19	ICW	ICW	ICW	ICW	ICW	ICW	ICW	
20								RP

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 1	ILO 2	ILO 3	ILO 4	ILO 5	ILO 6	ILO 7	ILO 8	ILO 9
1-19	ICW	ICW	ICW	ICW	ICW	ICW	ICW		
20								RP	
21									THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)
Airworthiness Dossier	Taught Modules to the value of 100 credits selected by the students.	RP	100

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a

high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

All students are part-time and therefore most are in full-time employment. However the MSc prepares them for a higher level of responsibility in the airworthiness field. This is often a legal requirement so that they can fulfil customer's obligation as an Approved organisation.

An example is the sponsoring of six students by the MOD to undertake the MSc Airworthiness. They were then appointed to the Airworthiness "Centre of excellence" which advised MOD on matters relating to aircraft safety and regulation. Other course members are part of the Military Aviation Authority, which was set up in 2010.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Applied Bioinformatics

Date of first publication/latest revision: 06/03/18

1. What is the course?

Course information

Course Title	Applied Bioinformatics
Course code	MSABIFTC, MSABIPTC, PDABIFTC, PDABIPTC, PCABIFTC, PCABIPTC
Academic Year	2018/19
Valid entry routes	MSc
Additional Exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield
School(s)	School of Water, Energy and Environment
Theme	Environment & Agrifood
Centre	Cranfield Soil and Agrifood Institute
Course Director	Dr Fady Mohareb
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	NA
Registration Period(s)	Full-time MSc - one year, Part-time MSc - up to three years

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the Bioinformatics Group at Cranfield University, which comprises a team of entirely computer-based researchers who have been involved in several multi-million pound national and international projects, mainly funded by the BBSRC, EPSRC, the Wellcome Trust, the European Commission, and several companies including Unilever, Sanofi Aventis and GlaxoSmithKline. Our research activities include Next-Generation sequencing informatics, genome and transcriptome informatics, plant molecular biology, drug discovery, systems biology and food science. This wide range of research activities and collaborations gives us the opportunity to offer a variety of research projects to our MSc students that suit their individual research interests.

Cranfield University interacts with the following institutions:

Sanger, GlaxoSmithKline, Unilever, London School of Hygiene and Tropical Medicine (LSHTM), Sanofi Aventis, Rothamsted Research, the European Bioinformatics Institute, the Wellcome Trust Institute, University of Athens and Imperial College. Our teaching team at Cranfield University benefits from the input of a group of world-renowned experts in a range of applied sciences, including bioinformatics. We lead and collaborate in diverse research and consultancy projects, both nationally and internationally.

Cranfield University remains fully responsible for the quality of the delivery of the course.

2. What are the aims of the course?

This course aims to equip graduate scientists with the computational skills and awareness needed to manage, analyse and interpret the vast amounts of genomic, transcriptomic, proteomic and metabolic data now becoming available. On completion of this course, you will be able to apply information technology to the development of new sequencing analysis and diagnostic tools and platforms. Additionally, you will gain the skills to design and implement new software plugins to fulfill the need of the research community, and will be equipped with a diverse set of knowledge and skills that directly meet the requirements of employers in this sector.

This programme is intended for the following range of students:

- The course is aimed both at graduates with degrees in life sciences, biotechnology, food science, natural sciences or medicine and alternatively those with a computational background.
- Scientists in industry in areas such as molecular biology, cell biology, and analytical techniques requiring training, or who wish to acquire skills and expertise in the field of bioinformatics

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Applied Bioinformatics

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Define the field of bioinformatics and related disciplines, and demonstrate a critical awareness of current research in the area.
- ILO 2. Use various programming languages to develop tailored bioinformatics applications to achieve specific computational biology tasks
- ILO 3. Effectively apply statistical methods and machine learning and pattern recognition algorithms to analyse and classify high throughput data
- ILO 4. Communicate the relevant concepts, both orally and in writing, to academics and practitioners from bioinformatics and related disciplines.

B. Postgraduate Diploma in Applied Bioinformatics

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Apply automation tools for various bioinformatics tasks by integrating existing bioinformatics resources and tools
- ILO 6. Integrate various research platforms and programming languages in order to build bioinformatics solutions
- ILO 7. Organise and manage a programme of software development
- ILO 8. Integrate knowledge, understanding and skills from the taught modules in a real-life situation
- ILO 9. Effectively work in a small project team to identify project objectives and select appropriate methodologies to address problems faced by industrial clients; collaborating with other team members to communicate findings in a professional manner in written, oral and visual forms

C. MSc in Applied Bioinformatics

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 10. Define a research question, develop aim(s) and objectives, select and execute a methodology, analyse data, and evaluate findings and draw appropriate conclusions.
- ILO 11. To communicate their findings successfully via a thesis, written in an approved School style and in an oral presentation.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Provision of lectures from external speakers to strengthen teaching in selected areas from academia and industry outside the University's area of expertise.
- Access to library resources, both on-campus and online, which are introduced at the beginning of the course by the Library Information Specialist
- Computational teaching in well-equipped facilities typical of those available to bioinformatics research scientists
- Timetabling designed to allow plenty of opportunity to assimilate information and seek further academic guidance where necessary
- Provision of a personal development programme as a self directed activity of reflection and action planning, designed to encourage independent development of transferrable skills such as oral presentation, written communication and project management.
- The potential to carry out a research project in another organisation so alternative research environments can be experienced.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Induction module	
ELECTIVE MODULES:	
60 Credits from the following modules:	
Introduction to Bioinformatics Using Perl	10
Exploratory Data Analysis and Essential Statistics Using R	10
Next Generation Sequencing Informatics	10
Proteome Informatics	10
Informatics for Metabolomics	10
Programming Using java	10
Data Integration and Interaction Networks	10
Advanced Sequencing Informatics and Genome Assembly	10
TOTAL:	60

B. **Postgraduate Diploma**

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits

COMPULSORY MODULES:	
Induction module	
Introduction to Bioinformatics Using Perl	10
Exploratory Data Analysis and Essential Statistics Using R	10
Next Generation Sequencing Informatics	10
Proteome Informatics	10
Informatics for Metabolomics	10
Programming Using java	10
Data Integration and Interaction Networks	10
Advanced Sequencing Informatics and Genome Assembly	10
Group project	40
ELECTIVE MODULES:	
N/A	N/A
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Induction module	
Introduction to Bioinformatics Using Perl	10
Exploratory Data Analysis and Essential Statistics Using R	10
Next Generation Sequencing Informatics	10
Proteome Informatics	10
Informatics for Metabolomics	10
Programming Using java	10
Data Integration and Interaction Networks	10
Advanced Sequencing Informatics and Genome Assembly	10
Group project	40
Thesis	80
ELECTIVE MODULES:	
N/A	N/A
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout

the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months.

Part-time students register for the course in **October** and are expected to complete the course within **3** years.

Each module is taught over two weeks, with the second week largely free of structured teaching to allow time for more independent learning and reflection.

Teaching methods:

- Lectures, usually 1-2 hours in length, which will include visiting lecturers / external speakers.
- Interactive sessions including workshops and hands-on tutorials.
- Practical elements including computer lab classes, demonstrations and site visits.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	I-AGF-INWK	Induction module	A Medina Vaya	33	0	0	Y		01/10/18	05/10/18	N/A	AO	N/A				N/A	
2	I-BIX-PRL	Introduction to Bioinformatics Using Perl	F Mohareb	25	0	10	N		08/10/18	12/10/18	40	ICW	100				FT 20/10/2018 PT 03/11/2018	July 19
3	I-BIX-STS	Exploratory Data Analysis and Essential Statistics Using R	F Mohareb	25	20	10	N		22/10/18	26/10/18	40	ICW	100				FT 03/11/2018 PT 17/11/2018	July 19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRACT – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

4	I-BIX-PRO	Proteome Informatics	M Anastasiadi	25	20	10	N		05/11/18	09/11/18	40	ICW	100				FT 17/11/18 PT 01/12/2018	July 19

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRACT – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

Please list all modules that are used by another existing course.

<u>Module code</u>	<u>Module title</u>	<u>Course that owns the module</u>	<u>Other course(s)/ programme(s) that use the module</u>

7. How are the ILOs assessed?

The following assessment types are utilised:

Students on the MSc can typically expect to have eight pieces of individual assessment by submitted work, one piece of group project work, and one element assessed by a thesis and an oral presentation.

This approach has been adopted in order to assess the ability of the student to demonstrate their ability in a range of environments.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Applied Bioinformatics – Postgraduate Certificate

Award ILOs Module No.	ILO 1.	ILO 2.	ILO 3.	ILO 4.
2	ICW	ICW		
3		ICW	ICW	ICW
4	ICW		ICW	ICW
5	ICW			ICW
6		ICW	ICW	
7		ICW	ICW	ICW
8	ICW	ICW		
9	ICW	ICW		

B. Applied Bioinformatics – Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 5.	ILO 6.	ILO 7	ILO 8.	ILO 9.
10	GPROJ	GPROJ	GPROJ ICW	GPROJ	GPROJ ICW

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO 10.	ILO 11.
11	THESIS/ OR	THESIS/ OR

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Our MSc opens doors to careers in industry, public research establishments and university research. The multidisciplinary nature of our course has allowed our students to follow diverse career paths in various medical-related sectors including:

- Pharmaceutical and Biotech companies
- Plant research institutes
- Food sector
- Public Institutions

- Bioinformatics research institutes
- IT companies

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: Applied Mathematics and Operational Research Programme (AMOR)

Date of first publication/latest revision: 23/05/2018

1. What is the course?

Course information

Course Title	Applied Mathematics and Operational Research Programme (AMOR) , encompassing courses: I. Defence Simulation and Modelling (DSM) II. Military Operational Research (MOR)
Course code	I. (DSM) MSDSMFTR - PCDSMFTR - PDDSMFTR - MSDSMPTR - PCDSMPTR – PDDSMPTR II. (MOR) MSMORFTR – PCMOR-FTR – PDMORFTR - MSMORPTR – PCMOR-PTR – PDMORPTR iii. SPAMRPTR
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert (both DSM and MOR)
Additional exit routes	PgDip, PgCert (both DSM and MOR)
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Shrivenham
School(s)	Cranfield Defence and Security
Theme	Defence and Security
Centre	Centre for Simulation and Analytics
Course Director	Mr J R Searle
Awarding Body	Cranfield University
Is this an AP Contract course?²	DSM : Yes MOR : No
Teaching Institution	Cranfield University
Admissions body	Cranfield University

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Entry requirements	Standard University entry requirements. Minimum IELTS of 6.5
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	N/A
Registration Period(s) available	Full time students: 12 months Maximum part time registrations of: MSc 5 years, PgDip 4 years, PgCert 3 years.
Course Start Month(s)	Full time: September Part time : September, January or by arrangement

Institutions delivering the course

This course is delivered by the Centre for Simulation and Analytics, Cranfield Defence and Security, where the research interests include the modelling and simulation of defence systems for analysis, experimentation and training.

Cranfield University interacts with the following institutions and in the following ways:

- A range of industrial partners provide software to the SSEL
- The course is supported by external visiting speakers in order to illustrate the real-world application and relevance of the material being taught
- The topics for student research projects are often suggested by external agencies and companies.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course in order to provide graduates with the technical qualities, transferable skills and independent learning ability necessary to make them effective in organisations that design, develop and use modelling and simulation in a defence context.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) entry and exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- Recent graduates wishing to acquire knowledge and skills in either modelling and simulation or military operational research or in order to obtain employment in the defence industry;
- Members of the Armed Forces working in or preparing to take up appointments in the area of modelling and simulation or of operational research;
- Graduates working in defence research organisations wishing to extend their knowledge of either modelling and simulation or operational research.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Defence Simulation and Modelling Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Appraise some of the issues involved in the design, development and application of models, simulations and Synthetic Environments (SEs)
- ILO 2. Demonstrate an understanding of the broad principles of simulation software and how to apply this knowledge in creating and using a synthetic environment
- ILO 3. Compare and critically evaluate some of the issues involved in procuring and using models and simulations for applications including training and analysis

For part-time PG Cert students, where a flexible path is available, note that some aspects may be limited by the elective module choices made.

B. Defence Simulation and Modelling Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 4. Explain the fundamentals of models and simulations and Synthetic Environments (SEs) and their place in procurement, training, the development of future force structures and the efficient use of defence resources
- ILO 5. Critically evaluate different methodologies used in modelling and simulation and SEs and compare their strengths and weaknesses and understand how to select an appropriate methodology for a given need or situation
- ILO 6. Demonstrate knowledge of issues and trade-offs that must be considered when using models, simulations and SEs for analysis and training
- ILO 7. Demonstrate understanding of the practical application of models, simulations and SEs in government and the defence industry
- ILO 8. Plan, specify, configure and utilise a distributed simulation or synthetic environment system
- ILO 9. Appraise and critically evaluate the appropriate hardware in creating and running models, simulations and SEs

C. Defence Simulation and Modelling MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 10. Demonstrate technical expertise, independent learning abilities and critical appraisal skills, by completing a modelling and simulation related project

D. Military Operational Research Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Understand the basic philosophy and methodologies of operational research
- ILO 2. Appreciate examples of the practical application of operational analysis in government and defence industry
- ILO 3. Distinguish between a limited range of the different modelling methodologies used in operational analysis and evaluate their strengths and weaknesses
- ILO 4. Explain the reasons for using models and describe how operational analysis is applied to support defence decision making
- ILO 5. Show transferable skills through an ability to communicate findings and issues to a subject specific audience

For part-time PG Cert students, where a flexible path is available, note that some aspects may be limited by the elective module choices made.

E. Military Operational Research Postgraduate Diploma

In addition to the intended learning outcomes outlined in D. above, a diligent student would also be expected to achieve the following in a topic relevant to their named award:

- ILO 6. Explain the fundamental principles of modelling in operational analysis (military operational research) and be aware of the contribution of modelling in procurement, training, the development of future force structures and the efficient use of defence resources
- ILO 7. Demonstrate an in-depth understanding of a wide range of the modelling methodologies used in operational analysis and to critically evaluate their strengths and weaknesses
- ILO 8. Demonstrate knowledge of the detailed design issues and trade-offs that must be considered when specifying, developing or choosing model components
- ILO 9. Demonstrate an understanding of knowledge of the issues involved in the design, development, verification, validation and application of operational analysis models and in the interpretation and communication of the results
- ILO 10. Show understanding of examples of the practical application of operational analysis in government and defence industry
- ILO 11. Explain the reasons for using models and describe how operational analysis is applied to support defence decision making
- ILO 12. Demonstrate an ability to communicate subject specific findings to both a specialist and general audience

F. Military Operational Research MSc

In addition to the intended learning outcomes outlined in D. and E. above, a diligent student would also be expected to achieve the following in a topic relevant to their named award:

- ILO 13. Demonstrate technical expertise, independent learning abilities and critical appraisal skills by completing an Operational Research related project.

4. How is the course taught?

Teaching methods:

- lectures from Cranfield staff and visiting speakers
- participative sessions, including tutorials and group exercises
- practical application elements, e.g. computer based demonstrations and practical sessions
- for the MSc: individual research project, with academic supervision

In addition to the teaching methods outlined above, students will be supported in their learning and personal development by:

- coursework involving investigation into a technical subject area and presentation to their peers
- participation on the modules by practitioners who are able to raise current issues and comment on the latest developments
- access to the Simulation and Synthetic Environment Laboratory (SSEL)
- an Academic Advisor (Personal Tutor) who gives advice on academic and other matters, acts as a link between students and the University academic authorities and monitors progress

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

Defence Simulation and Modelling

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

PgCert in Defence Simulation and Modelling – Full-time	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Foundations of Modelling and Simulation	10
Discrete & Continuous Simulation	10
Computer Graphics	10
War Gaming and Combat Modelling	10
Advanced Module #1	10
Advanced Module #2	10
ELECTIVE MODULES:	
N/A	
TOTAL:	60

PgCert in Defence Simulation and Modelling – Part-time	Credits
COMPULSORY MODULES:	
Introductory Studies	0

Foundations of Modelling and Simulation)	10
ELECTIVE MODULES:	
5 modules chosen from: Discrete & Continuous Simulation Computer Graphics War Gaming and Combat Modelling Experimentation Analysis & Trials for Simulation Weapon Systems Performance Assessment Intelligent Systems Networked and Distributed Simulation Advanced Module #1 Advanced Module #2 Networked and Distributed Simulation Exercise	50 (10 credits per module)
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

PgDip in Defence Simulation and Modelling (Full-time and Part-time)	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Foundations of Modelling and Simulation	10
Discrete and Continuous Simulation	10
Computer Graphics	10
War Gaming and Combat Modelling	10
Experimentation Analysis & Trials for Simulation	10
Weapon Systems Performance Assessment	10
Intelligent Systems	10
Networked and Distributed Simulation	10
Advanced Module #1	10
Advanced Module #2	10
Advanced Module #3	10
Networked and Distributed Simulation Exercise	10
ELECTIVE MODULES:	
N/A	
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

MSc in Defence Simulation and Modelling (Full-time and Part-time)	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Foundations of Modelling and Simulation	10
Discrete and Continuous Simulation	10
Computer Graphics	10
War Gaming and Combat Modelling	10

Experimentation Analysis & Trials for Simulation	10
Weapon Systems Performance Assessment	10
Intelligent Systems	10
Networked and Distributed Simulation	10
Advanced Module #1	10
Advanced Module #2	10
Advanced Module #3	10
Networked and Distributed Simulation Exercise	10
MSc Research Project	80
ELECTIVE MODULES:	
N/A	
TOTAL:	200

Military Operational Research

A. Postgraduate Certificate MOR

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

PgCert in Military Operational Research – Full-time	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Introduction to Operational Research Techniques	10
Discrete and Continuous Simulation	10
Decision Analysis	10
War Gaming and Combat Modelling	10
Advanced Module #1	10
Advanced Module #2	10
ELECTIVE MODULES:	
N/A	
TOTAL:	60

PgCert in Military Operational Research – Part-time	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Introduction to Operational Research Techniques	10
ELECTIVE MODULES:	
5 modules chosen from: Discrete and Continuous Simulation Decision Analysis War Gaming and Combat Modelling Statistical Analysis and Trials Weapon System Performance Assessment Intelligent Systems Logistics Modelling Advanced Module #1 Advanced Module #2 Advanced Module #3	50 (10 credits per module)
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

PgDip in Military Operational Research (Full-time and Part-time)	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Introduction to Operational Research Techniques	10
Discrete and Continuous Simulation	10
Decision Analysis	10
War Gaming and Combat Modelling	10
Statistical Analysis and Trials	10
Weapon System Performance Assessment	10
Intelligent Systems	10
Logistics Modelling	10
Advanced Module #1	10
Advanced Module #2	10
Advanced Module #3	10
Advanced Module #4	10
ELECTIVE MODULES:	
N/A	
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

MSc in Military Operational Research (Full-time and Part-time)	Credits
COMPULSORY MODULES:	
Introductory Studies	0
Introduction to Operational Research Techniques	10
Discrete and Continuous Simulation	10
Decision Analysis	10
War Gaming and Combat Modelling	10
Statistical Analysis and Trials	10
Weapon System Performance Assessment	10
Intelligent Systems	10
Logistics Modelling	10
Advanced Module #1	10
Advanced Module #2	10
Advanced Module #3	10
Advanced Module #4	10
MSc Research Project	80
ELECTIVE MODULES:	
N/A	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in September and are expected to complete the course within 12 months.

The courses are also offered on a part-time basis. Part-time students normally register for their course in September or January, but if they have an appropriate background, it may be possible to register at a different time.

The maximum registration period for part-time students is:

- MSc – 5 years
- PgDip – 4 years
- PgCert – 3 years.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

The full-time PgCert requires successful completion of 4 standard taught modules and 2 self-study 'Advanced' modules. More flexibility is however available for part-time PgCert students, who may choose from a range of elective modules in order to arrange their studies with respect to their other commitments over the shorter period of registration available to them.

Building on this, the PgDip then also requires successful completion of an additional set of 4 standard taught modules and a further 2 self-study 'Advanced' modules.

For the MSc, students are also required to successfully complete a dissertation.

Each standard taught module consists of a one week course of lectures, tutorials and practical work, followed by directed study coursework, involving private study equivalent to a further week of full-time work, allowing time for more independent learning and reflection.

A limited number of these standard taught modules are approved for delivery by non-residential distance e-learning using the on-line Cranfield Moodle Virtual Learning Environment (VLE). A 10-week block period for part time students to complete such on-line modules is typically offered once in each standard academic term.

The two-week self-study Advanced modules are 'mini-projects' with unique topics agreed individually for each student, which build on material covered in the standard modules and offer students the opportunity to explore selected topics in more depth. Depending on the nature of the topic selected, and excepting the 'Networked and Distributed Simulation Exercise' for the DSM Course, advanced modules typically may not involve any additional classroom attendance. A 10-week block period for part time students to complete Advanced Modules is typically offered once in each standard academic term.

Course Modules

The following modules outline all parts of the programme which lead to an **MSc**. Other awards associated with the courses include some or all of these modules.

Module Number	Module code	Related Award	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
									Module Start Date (eg Pre-course task)	Residential ⁷ Start Date	Residential ⁷ End Date	Minimum Mark ⁸ 7 - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
													Type of Assessment	Weighting within module ⁸ (%) of Independent	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	R-AMOR-INTRO	DSM MOR	Introductory Studies A & B	Dr J D Salt	30	0	0	Y	A:03/09/18 B:14/01/19	03/09/18 14/01/19	07/09/18 18/01/19	N/A	AO	N/A				N/A	N/A
2	R-AMOR-FMS	DSM	Foundations of Modelling & Simulation A & B	Mr J M Hoggard	30	0	10	Y	A:10/09/18 B:21/01/19	10/09/18 21/01/19	14/09/18 25/01/19	40	ICW	100				A FT: 24/09/18 A PT: 22/10/18 B PT: 04/03/19	A FT: 07/01/19 A PT: 29/07/19 B PT: 29/07/19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Most Advanced Modules (except NDSE) comprise self-study, mini-project coursework, equivalent to 10 days effort for a full-time residential student (Occurrence A).. For a part-time student the equivalent work will normally be conducted non-residentially over a block period of 10 weeks which is typically offered once in each standard academic term (Occurrences B, C and D). NDSE for the DSM Course however typically requires group-based self-study work and is therefore normally undertaken residentially at Shrivenham Campus alongside the full-time students.

Advanced Module Topics will typically be proposed individually by students to follow-on from previous studies in one or more standard taught modules as pre-requisites. Topics require the approval of the relevant Module Manager(s) and Course Director. NDSE is an exception to this, where the topic will be provided and students will work as a group.

Part-time students requiring to re-take Advanced Modules will complete the activity in the next scheduled 10-week block.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination ; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

Please list all modules that are used by another existing course.

<u>Module code</u>	<u>Module title</u>	<u>Course that owns the module</u>	<u>Other course(s)/ programme(s) that use the module</u>
R-AMOR-FMS	Foundations of Modelling and Simulation	AMOR	MESE SEDC share teaching in their R-SEDC-SSE module
R-AMOR-NDS	Networked and Distributed Simulation	AMOR	SEDC (as NDS)
R-AMOR-DA	Decision Analysis	AMOR	SEDC share teaching in their R-SEDC- DAMS module.

7. How are the ILOs assessed?

The following assessment types are utilised:

With some exceptions for the MOR course (discussed below), most standard taught modules are assessed 100% by written individual coursework assignments. The coursework is normally issued at the beginning of the taught module. Full-time students are normally required to submit the coursework approximately one week after the end of the module. Part-time students are normally required to submit the coursework approximately 5 weeks after the end of the module. It is felt that this mode of assessment best suits the practical and applied nature of the disciplines involved.

Two of the standard taught modules in the MOR course are assessed 100% by formal examinations – with one being an open book and open notes exam, while the other is a closed book exam. For these modules, the requirement to submit coursework will therefore be formative (but still compulsory), not summative. Past examination papers are made available.

Advanced modules are 100% assessed by written individual coursework, which may include an optional viva. An individual presentation is also normally required, although this is a formative part of the learning experience and does not contribute to the summative assessment.

The MSc research project is assessed by a written dissertation and may include an optional viva.

This approach has been adopted in order that the individual elements of the courses can be assessed by the most appropriate method and that students can demonstrate their understanding in a number of different ways.

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for

Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality

Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Students on this course are generally either sponsored by their existing employer as preparation for specific roles in Training, Analysis, Acquisition and Experimentation in the Military, Defence Organisations or Defence Industry, or else are seeking employment in those areas.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Astronautics and Space Engineering

Date of first publication/latest revision: May 2018

1. What is the course?

Course information

Course Title	MSc in Astronautics and Space Engineering with variants in: MSc in Astronautics and Space Engineering (extended thesis) MSc in Astronautics and Space Engineering (Spacemaster) – <i>full-time option only</i>
Course code	MSASEFTC, MSASEPTC, MSASMFTC
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	Not Applicable
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Autonomous and Cyber-physical Systems
Course Director	Dr Jenny Kingston
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Benchmark Statement(s)	Not Applicable
Registration Period(s) available	One year full-time, two-three years part-time (up to five years by extended thesis)
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Autonomous and Cyber-physical Systems where the research interests include:

- The design and development of both space and aeronautical systems.

Cranfield University interacts with the following institutions and in the following ways:

- The Erasmus Mundus (Spacemaster) variants of the course are two year programmes taught jointly with other European institutions. The SpaceMaster involves prior learning and teaching for the first year from Julius Maximilian University Wurzburg (Germany) and Lulea Technical University (Sweden).

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by Royal Aeronautical Society (RAeS) until October 2016 intake. Renewal of accreditation will be sought for 2017 intake onwards.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- Equip students from backgrounds in engineering or physical science with the knowledge, understanding and skills required to enable them to contribute to the European space industry or to space-related research.
- Develop students' specialist technical skills and to give students an awareness of space system engineering so that their specialist skills can be most effectively applied.
- Develop the transferable skills of students for a professional career in the space industry or research.

This programme is intended for the following range of students:

- New graduates seeking to pursue a career in the space industry.
- Practitioners in the sector, particularly at junior and middle management levels, who are seeking to expand their knowledge and skills in space systems engineering in order to further develop their careers.
- Practitioners who are not employed in the sector, who are seeking a career in the space industry.
- Both practitioners and new graduates seeking to pursue doctoral research in the area of spacecraft engineering.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. MSc

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a systematic knowledge, understanding and critical evaluation of the key principles of the main spacecraft disciplines (propulsion, orbits, communications, structure, data handling, etc.) and be competent to analyse performance quantitatively.
- ILO 2. Demonstrate a critical judgement of their specialist subject area(s) at a level appropriate to new recruits to the space industry such that they are able to contribute directly without significant further training.
- ILO 3. Demonstrate a systematic knowledge of the organisation of the space industry and typical space projects, within the wider economic, legal, social, ethical and environmental context.
- ILO 4. Be able to apply their knowledge and understanding practically to the design and analysis of space systems.
- ILO 5. Write a technical report to communicate their work clearly to others.
- ILO 6. Give an oral presentation to describe the execution and results of a technical project.
- ILO 7. Plan, execute and manage a small research project.
- ILO 8. Work effectively as a member of a team on a technical project.
- ILO 9. Undertake independent study and research.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Lectures and workshops delivered by industry practitioners, demonstrating the application of theory to various examples and case studies.
- Industry visits to demonstrate industry practice and facilities.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. MSc

The accumulation of 200 credits (or more) through the assessment of taught modules and the successful completion of the Thesis as detailed below:

Astronautics and Space Engineering (standard course)

Description	Credits
COMPULSORY MODULES:	
Modules: 1 and 4	10
Modules: 2 and 3	20
Group Design Project: 11	60

Individual Research Project: 12	90
ELECTIVE MODULES:	
2 modules chosen from: 5-10	20
TOTAL:	200

Astronautics and Space Engineering (extended thesis option)

Description	Credits
COMPULSORY MODULES:	
Modules: 1 and 4	10
Modules: 2 and 3	20
Extended Individual Research Project: 13	150
ELECTIVE MODULES:	
2 modules chosen from: 5-10	20
TOTAL:	200

Astronautics and Space Engineering (Spacemaster variant)

Description	Credits
COMPULSORY MODULES:	
Accredited prior learning at Julius Maximilian University Wurzburg and Lulea Technical University	120
Module: 3	10
Individual Research Project: 12	90
ELECTIVE MODULES:	
2 modules chosen from: 5-10	20
TOTAL:	240

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout

the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are normally expected to complete the course within 11 calendar months.

Part-time students usually register for the course in October and are normally expected to complete the course within 2 - 3 years. For those taking the extended thesis route registration is available for up to 5 years.

The majority of lecture modules take place between October and March and run in parallel with the Group Design Project which concludes by early May. The Individual Research Project Component runs from January through to the end of the programme in September. An Extended Thesis variant of the course offers a longer more in-depth Individual Research Project Component that runs from November to the end of the programme instead of participation in the Group Design Project. This is generally aimed at students who have already had significant group project experience (for example in prior work in industry).

This course is also offered on a part-time basis. Students would instead complete the extended thesis variant of the course over a 2 to 5 year period, firstly completing the taught element of the programme before starting the individual research project.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-ASE-AMA	Astrodynamics and Mission Analysis	Dr Joan Pau Sanchez	12	0	5	N		10/2018	10/2010 ⁷	40	EX	100				12/18	06/2019
2	N-ASE-SSE	Space Systems Engineering	Dr Jenny Kingston	26	0	10	N		10/2018	10/2018	40	EX	100				01/19	06/2019
3	N-ASE-SP	Space Propulsion	Dr Jenny Kingston	22	22	10	N		10/2018	10/2018	40	EX	100				01/19	06/2019

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. In the standard course, students can expect to have 6 written examinations, 3-4 pieces of assessment by submitted work and 2 elements of formative or summative assessment by presentation or viva.

This approach has been adopted in order to ensure all students achieve the intended learning outcomes of the programme.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

The vast majority of our graduates are recruited by both the space industry and space-related academic groups. The positions cover a wide range of engineering disciplines all with the requirement for the broad space systems understanding that the course provides.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: Automotive Programme

Date of first publication/latest revision: April 2018

1. What is the course?

Course information

Course Title	MSc in Automotive Engineering MSc in Automotive Mechatronics
Course code	MSAEGFTC, PDAEGFTC, PCAEGFTC (Automotive Engineering) MSAMCFTC, PDAMCFTC, PCAMCFTC (Automotive Mechatronics)
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PGDip, PGCert
Mode of delivery	Full-Time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Transport Systems
Centre	Advanced Vehicle Engineering Centre
Course Director	Dr Glenn Sherwood (Automotive Engineering) Dr Stefano Longo (Automotive Mechatronics)
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year
Course Start Month(s)	October

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Institutions delivering the course

This programme is delivered by the School of Aerospace, Transport and Manufacturing, Transport Systems Theme, Advanced Vehicle Engineering Centre where the research interests include:

- Vehicle Electrification
- Advanced Control
- Multi-domain Modelling
- Novel Engine Technology
- Vehicle Braking Systems

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

The Automotive Engineering course is accredited formally by the Institution of Mechanical Engineers (IMechE) until October 2021.

The MSc in Automotive Mechatronics is accredited formally by the IET .

2. What are the aims of the course?

Cranfield University offers this Automotive programme in order to:

- Meet employer demand for post graduate engineers who have strong applied analytical skills in all areas of vehicle system and component design to meet the challenging market and legislative demands for vehicle safety, Performance and sustainability.
- Provide a primary training and dissemination route for Cranfield University's increasing research portfolio in the area of low carbon vehicle technologies and design methods.
- Supply to the automotive industry (and associated supply chain) high calibre post graduate engineers with the technical qualities, transferable skills and independent learning ability to make them effective in organisations that design and develop automotive products.

Postgraduate Diploma (PGDip) and Postgraduate Certificate (PGCert) exit routes are provided for students who wish to access only parts of the course provided.

This programme is intended for the following range of students:

- EU or international students with a 1st class or 2nd class UK honours degree (or equivalent) in an engineering related discipline.
- Qualifying Double Degree students from the EU.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

- ILO 1. Demonstrate the ability to work in a team and act as team leader on problem solving when making decisions in complex and unpredictable situations.
- ILO 2. Employ reduced order models to analyse vehicle system or component dynamics as a pre-requisite to the design and evaluation of a vehicle control algorithm.
- ILO 3. Critically evaluate the dynamics of a system and be able to formulate the design of a Single-Input-Single-Output controller that will satisfy vehicle level performance targets.

- ILO 4. Critically evaluate the vehicle ride and handling subjective requirements and, through the use of simplified vehicle dynamic models, demonstrate an understanding of objective requirements for vehicle ride and handling.
- ILO 5. Evaluate and design fundamental vehicle concepts, taking into account the interdependencies that exist between vehicle structure, powertrain, suspension, steering and braking systems.
- ILO 6. Evaluate and be able to match the characteristics of powertrain systems and components to demonstrate a critical understanding of vehicle noise vibration and harshness (NVH), refinement and driveability.
- ILO 7. To critically evaluate the structure of different vehicle types and to assess the impact of different load path faults within the vehicle.
- ILO 8. Assess, evaluate and design vehicle systems, assemblies and components taking into account typical vehicle requirements and the constraints of packaging, ergonomics, active and passive safety, legislation and regulation.
- ILO 9. Develop a critical understanding of the physical processes at work during the preparation of the fuel & air mixture and its subsequent combustion and emission. to demonstrate a knowledge of the performance and emissions requirements of engines in road vehicles.
- ILO 10. Explain the importance of instrumentation within the vehicle development life-cycle, including the ability to review, evaluate and select the most appropriate technology, method of integration and data-processing techniques that are required to support system and component testing.
- ILO 11. Assess and critically evaluate various suspension and steering systems, including the selection of the most appropriate criteria for comparison, and the ability to design new suspension concepts to satisfy vehicle ride and handling requirements.
- ILO 12. Evaluate the different methods and technologies available that aid in the global decarbonisation and life-cycle sustainability of the automotive sector.
- ILO 13. Critically evaluate different hybrid electric vehicle and electric vehicle architectures, including their usage requirements, designs, and the integration of different subsystem technologies.
- ILO 14. Critically evaluate and formulate physical models of vehicle mechatronic systems using various modelling methodologies.
- ILO 15. Critically evaluate the design of a multi-input-multi-output system and be able to select an appropriate design method to realise an implementable control system with appropriate performance and robustness.
- ILO 16. Critically evaluate existing control system structures and be able to formulate alternative solutions to existing and future applications of vehicle control technology across the powertrain, transmission, chassis and body domains of the vehicle.
- ILO 17. Analyse the functional and non-functional requirements of the vehicle mechatronic system and be able to formulate appropriate hardware implementation and verification strategies.
- ILO 18. Demonstrate the ability to independently evaluate and apply the results of scholarly research.
- ILO 19. Independently plan and implement a programme of individual research including the effective written and oral dissemination of the research outcomes

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

Automotive Engineering:

Depending upon the modules completed, a subset of the following ILOs would be applicable:

- ILO 1 (compulsory)
- ILOs 5-13, 16

Automotive Mechatronics:

Depending upon the modules completed, a subset of the following ILOs would be applicable:

- ILO 1 (compulsory)
- ILOs 2-6, 8, 9 13-15, 17

B. Postgraduate Diploma

In completing this course, and achieving the associated award, a diligent student should be able to:

Automotive Engineering:

- ILOs 1, 5-13, 16

Automotive Mechatronics:

- ILOs 1-6, 8, 9, 13-15, 17

C. MSc

In completing this course, and achieving the associated award, a diligent student should be able to:

Automotive Engineering:

- ILOs 1, 5-13, 16, 18, 19

Automotive Mechatronics:

- ILOs 1-6, 8, 9, 13-15, 17-19

4. How is the course taught?

Students will be supported in their learning and personal development by:

- Provision of lectures from academics from selected UK Universities to support the programme in areas outside the technical expertise of Cranfield University.
- Provision of lectures from leading industry experts and practitioners highlighting the practical implementation and constraints associated with the theoretical principles introduced on the programme.
- All course material is available via the web-based learning environment Black Board.
- The course is timetabled as a series of modules thereby allowing diligent students to effectively manage the assessment requirements of the course.
- The provision of non-assessed study-skills training covering areas such as; academic report writing, presentation skills, research skills and working with University facilities (IT, library, Student Support Services).
- The extensive use of tutorial sessions and computer aided engineering exercises employing software packages commonly utilised in industry, including Matlab, WAVE/AVL BOOST and CAE/CATIA.
- The opportunity to complete an individual Research Project, which may be sponsored by industry and using industry scale laboratory facilities and software packages.
- Provision of a Personal Development Programme integrated throughout the Taught Modules and an individual Research Project that encourages the development of transferable skills (such as oral and written communication skills, independent learning and project management).

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out

in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Automotive Engineering

Description	Credits
COMPULSORY MODULES:	
Module 13 and to accumulate 40 credits from the following taught modules: 1, 2, 3, 4, 5, 10, 11, 12,	60
ELECTIVE MODULES:	
n/a	
TOTAL:	60

Automotive Mechatronics

Description	Credits
COMPULSORY MODULES:	
Module 14 and to accumulate 40 credits from the following taught modules: 1, 2, 3, 5, 6, 7, 8, 9, 10	60
ELECTIVE MODULES:	
n/a	
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Automotive Engineering

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 4, 5, 10, 11, 12, 13	120
ELECTIVE MODULES:	
n/a	
TOTAL:	120

Automotive Mechatronics

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 5, 6, 7, 8, 9, 10, 14	120
ELECTIVE MODULES:	
n/a	
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Automotive Engineering

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 4, 5, 10, 11, 12, 13, 15	200
ELECTIVE MODULES:	
n/a	
TOTAL:	200

Automotive Mechatronics

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 5, 6, 7, 8, 9, 10, 14, 15	200
ELECTIVE MODULES:	
n/a	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout

the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}

- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months. This programme is not offered on a part-time basis.

The taught modules are preceded by an introductory, non-assessed, study skills module. The taught modules are delivered in a modular format and will typically last for one week. Throughout terms one and two, sufficient non-structured learning and teaching time is scheduled to facilitate independent learning, the completion of assessed work and for personal reflection.

Within the first term, all students participating on the automotive programme will attend the combined (core) automotive modules. During the second term, students will attend those modules defined for their respective specialism (Automotive Engineering / Automotive Mechatronics). For the duration of the 3rd term, students will have the opportunity to undertake their individual Research Project. There are no elective elements within the individual courses.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-APE-VDP	Vehicle Design Powertrain and Performance	Dr Marko Tirovic	60		20	Y		01/10/18	12/10/18	50	EX	100				13/12/18	Sept 2019
2	N-AP-AE02	Engine Fuels and Lubrication	Dr Glenn Sherwood	30		10	Y		12/11/18	16/11/18	50	EX	100				04/01/19	Sept 2019
3	N-AP-AE03	Automotive Control and Simulation	Dr Daniel Auger	30		10	Y		15/10/18	19/10/18	50	ICW	100				02/11/18	30/08/19
4	N-APE-VSC	Vehicle Structures and	Dr Marko Tirovic	60		20	N		07/01/19	18/01/19	50	ICW	100				01/02/19	30/08/19

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO- Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

N-AP-AM05	Vehicle Electrification and Hybridisation	Automotive Mechatronics	Automotive Engineering, Automotive Mechatronics
N-AP-AE13	Individual Research Project	Automotive Engineering	Automotive Engineering

7. How are the ILOs assessed?

The following assessment types are utilised:

- Within the subset of core automotive modules taught in term 1 are assessed via written examinations that will be set early in term 2. Conversely, module 4 will be assessed via an individual assignment. It is noteworthy that this assignment will be aligned to the respective ILOs and may include elements of computer based analysis, model development and simulation.
- The specialised stream modules (4, 11, 12) and (6-9) are all assessed using a combination of written assignment and examination. Written Examinations are scheduled for the end of Term 2 / early Term 3. As with the core modules, the nature of the summative assignments in all cases will be constructively aligned to the respective module ILOs and may include an element of written work, oral presentation, numerical analysis and experimentation.
- Modules 13 and 14, represent an extended open-ended Group Project Activity for both streams and are assessed via a combination of written and presentation
- The individual Research Project is assessed via a written thesis and oral examination.

This approach has been adopted because:

The Automotive Engineering course has been running since 1960 and the experience of the course teaching team feel that this is the most appropriate blend of assessments to fulfil the ILO's.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate and Postgraduate Diploma

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8	ILO9	ILO10	ILO11	ILO12	ILO13	ILO14	ILO15	ILO16	ILO17
1					EX	EX		EX		EX	EX						
2									EX			EX					
3		ICW	ICW														
4							ICW										
5				EX													
6														EX			
7															ICW		
8																EX	
9																	MULTI
10													ICW				
11									GCW								
12											EX						
13	MULTI				MULTI												
14	MULTI															MULTI	

B. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO18	ILO19
15	THESIS	THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10

(Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

The following patterns have emerged with regard to the future career paths for those graduates who have successfully studied automotive engineering:

- Continued higher education – PhD Research, both within Cranfield University or within other high ranking UK/EU Universities
- Employment within internationally leading vehicle manufacturers, including:
 - Toyota Europe (Belgium)
 - PSA (France)
 - Jaguar Cars / Land Rover (UK)
 - Bentley Motors (UK)
 - Ford (UK)
- Employment within internationally leading engineering consultancies and system suppliers to the automotive industry, including:
 - AVL (UK and Europe)
 - Ricardo Consulting Engineers (UK)
 - TRW (UK)
 - Bosch (Germany)

Graduands will typically take-up a graduate / senior engineering roles, within the respective product development or research departments of the employing organisations and which are often linked to an accelerated promotion scheme.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Autonomous Vehicle Dynamics and Control

Date of first publication/latest revision: May 2018

1. What is the course?

Course information

Course Title	MSc in Autonomous Vehicle Dynamics and Control
Course code	MSAVCFTC
Academic Year	2018/2019
Valid entry routes	MSc
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Autonomous and Cyber-Physical Systems
Course Director	Dr N P Avdelidis
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year
Course Start Month(s)	October

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Institutions delivering the course

This course is delivered by School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Cyber-Physical Systems where the research interests include:

- Autonomous Systems
- Flight Dynamics
- and Control for Autonomous Systems
- Sensor Fusion
- Artificial Intelligence for Autonomous Systems
- Decision-making in Autonomous Systems
- Guidance and Navigation for Autonomous Systems
- Autonomous Systems Design and Operation

Teaching and/or assessment is conducted at the Cranfield Campus.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

Accreditation is being sought for the MSc in Autonomous Vehicle Dynamics and Control from the Royal Aeronautical Society (RAeS) and the Institution of Mechanical Engineers (IMechE) on behalf of the Engineering Council as meeting the requirements for Further Learning for registration as a Chartered Engineer.

2. What are the aims of the course?

The global market for aerial, ground, and marine Autonomous Vehicles has grown rapidly due to the advent of drones and driverless cars. Defence, Aerospace, Automotive, and Marine Industries seek graduates conversant in key aspects of Autonomy including: dynamics & control, guidance & navigation, decision making, sensor fusion, artificial intelligence, communication & and networking. These durable and transferrable skills are the bedrock of this unique MSc course whose content has been based on advice from the Industrial Advisory Board, comprising the relevant Industrial representatives from Big Primes to Small and Medium-sized Enterprises.

The Autonomous Vehicle Dynamics and Control MSc is a unique course for graduates in engineering, physics, or mathematics wishing to acquire durable and transferrable skills in Autonomous Vehicles in order to pursue career opportunities in Defence, Aerospace, Automotive, and Marine Industries. Successful graduates of our MSc course become conversant in key aspects of Autonomy which advantageously differentiates them in today's competitive employment market

The taught part of the Autonomous Vehicle Dynamics and Control MSc course comprises eight ten-credit modules, followed by a forty-credit group project. The ten-credit modules are:

- 1) Introduction to Unmanned Aircraft Systems (UAS)
- 2) UAS Flight Dynamics
- 3) UAS Flight Control
- 4) UAS Modelling & Simulation
- 5) Sensor Fusion
- 6) Artificial Intelligence for Autonomous Systems
- 7) Guidance & Navigation Systems
- 8) Autonomous Vehicle Control Systems

The linchpin of the taught part is the group project in which the students design, build and fly an unmanned aerial vehicle, thus integrating and applying the knowledge acquired in modules 1–8.

The taught part of the course is followed by Individual Research Projects (IRPs) and the topic of each of the IRPs is provided by one of the member of the Industrial Advisory Board. The real-world relevance of the IRP topics is another unique feature of our MSc course and is another effective differentiator in the job market.

This course is also available as a three-stage programme from a Postgraduate Certificate, to a Postgraduate Diploma through to an MSc.

This programme is intended for the following range of students:

- Engineers wishing to apply their skills into new areas.
- Qualified engineers working with autonomous systems.
- Recent STEM graduates wishing to extend their knowledge and skills in the above areas.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Distinguish the primary engineering challenges of Unmanned Aircraft Systems (UAS) analysis and design.
- ILO 2. Formulate, analyse and simulate flight dynamic models of an air vehicle.
- ILO 3. Analyse and design control systems for the autonomous operation of an air vehicle.
- ILO 4. Relate sensor fusion and Artificial Intelligence in the context of autonomously operating vehicles.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Appraise and utilise fundamental guidance and navigation techniques for UAS.
- ILO 6. Examine and relate advanced control systems and their applications to UAS.
- ILO 7. Design, build and fly an unmanned aerial vehicle by working in a group environment.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 8. Exhibit independent learning by planning, conducting and critically evaluating an individual programme of extended research into some aspect of UAS.
- ILO 9. Communicate effectively, verbally or in writing, to suit a range of audiences.

4. How is the course taught?

The course is delivered through a combination of lectures, tutorials and hands-on lab sessions

and also a group project in which the students design, build and fly an unmanned aerial vehicle, thus integrating and applying the knowledge acquired in all the other modules.

The course uses the Blackboard learning environment with all materials delivered in electronic form. In addition to standard learning support facilities (library facilities, IT provision, etc), the course utilises a number of specialised facilities, namely:

- Indoor flight area for small UAS.
- Indoor lab for small / medium UAS development.
- Controlled use of the Cranfield airport for flying UAS.
- Individual Research Projects are proposed by industrial partners.

The topic of each of Individual Research Projects (IRPs) is provided by one of the member of the Industrial Advisory Board (IAB). Progress on the IRPs is monitored by Interim Project Reviews which also serve to improve individual communication skills. After the final thesis viva, students are given an opportunity to prepare posters summarising their IRPs and present them to the IAB.

Students who produce high-quality IRP work are encouraged (and mentored) to write a conference / journal paper for peer-review publication.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Four compulsory modules: 1-4	60
ELECTIVE MODULES:	
Two to be chosen from modules: 5-8	
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-9	120
ELECTIVE MODULES:	

TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-9	120
Individual Research project: 10	80
ELECTIVE MODULES:	
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);

- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Only full-time version of the course is offered and full-time students register for the course in October and are expected to complete the course within 12 calendar months.

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
0	New code required	Induction	Dr N P Avdelidis	15		0			27/09/2018	28/09/2018	n/a	AO						
1	N-AVC-(New code required)	Introduction to Unmanned Aircraft Systems	Dr N P Avdelidis	28		10	N		01 /10/18	05/10/18	40	ICW	100				02/11/18	Next Available date within the academic year
2	N-AVC-(New code required)	UAS Flight Dynamics	Prof Antonios Tsourdos	28		10	N		08/10/18	12/10/18	40	EX	100				Exam week 1 Jan 2019	Exam Week 5 - April 2019
3	N-AVC-(New code	UAS Flight Control Systems	Prof Antonios Tsourdos	28		10	N		22/10/18	26/10/18	40	EX	100				Exam week 1	Exam week 5 April 2019

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment

7. How are the ILOs assessed?

The following assessment types are utilised:

For the taught course part of the programme, the ratio between examination and assessed coursework is approximately 3:2, but depends on the chosen options.

The examinations will generally take a traditional form and enable the students to demonstrate their fundamental knowledge and understanding and to apply the knowledge in a critical way to problems. This ensures that successful students have achieved the learning outcomes, in particular ILOs 1 to 4.

Written coursework assignments take the form of technical reports, laboratory reports and traditional style essays. Such assignments will demonstrate skills in information retrieval, literature citation, critical evaluation and written presentation skills to suit a variety of formats and audiences. Problem solving activities will also be incorporated in such assignments. This will ensure that successful students have achieved the ILOs 1 to 5.

Where appropriate as part of the learning process, some modules will include an element of group work, but this will not form part of the formal assessment procedure.

The research project is examined for the MSc by thesis (85%) and by Presentation (15%). For the Postgraduate Diploma it is examined 100% thesis, however, the candidate will be expected to give a presentation but will not be formally assessed. Within the project, other learning outcomes will be demonstrated to have been achieved.

In all instances, assessment will be based on the demonstration of appropriate knowledge, an appropriate mode of presentation, interpretation within the correct context, critical discussion and the use and citation of appropriate sources of information.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

The knowledge and skills the graduates gain following the successful completion of the course enables them to work in a broad range of industries and a few graduates pursue academic careers through PhD Programmes.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information. Courses are under constant review, however, and the University reserves the right, without notice, to withdraw, update or amend this course specification at any time.

COURSE TITLE: MSc in Business and Strategic Leadership (*Barclays Cohort 1*)

Date of first publication/latest revision: June 2018

1. What is the course?

Course information

Course Title	Business and Strategic Leadership
Course code	MSBSLPTC, MSBSSPTC, PDBSLPTC, PCBSLPTC
Academic Year	2017/18
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Part-time
Location of Study	Cranfield
School(s)	School of Management
Theme	Leadership and Management
Centre	CED
Course Director	Neil Turner
Awarding Body	Cranfield University
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	N/A

Registration Period(s) available	MSc - part-time - maximum of 5 years PG Certificate – 3 years PG Diploma – 4 years
Course Start Month(s)	TBC (closed course client determined start date)

Institutions delivering the course

This course is delivered by the Centre for Customised Executive Development, School of Management. The research interests include management, leadership and change management.

This is offered as a closed corporate programme and Cranfield interacts with the client in the following ways:

- Delivery locations are jointly agreed with the client but have to meet Cranfield's requirements
- Core modules are set but in consultation with the client the course can be customised to suit a specific industry or client need through the agreeing pre-scribed electives which the students have to take.
- Students will undertake their research and/or project work off campus, in their own work place.
- Teaching and assessing is provided by Cranfield faculty and Cranfield RTS Associates

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course at Postgraduate Certificate (PgCert), Postgraduate Diploma (PgDip) and MSc entry levels. Exit routes are provided for students at the end of the certificate and diploma for those who wish to access only parts of the course provided.

The aims of the Certificate are:

- To develop participants' knowledge and awareness of business functions and disciplines relevant to being able to analyse a business in preparedness for strategic change.
- To enable participants to develop appropriate knowledge and skills to lead and or participate in the start of a change initiative in their organisation.

In addition, the aims of the Diploma are:

- To enable participants to gain a systematic understanding and apply their knowledge relating to strategy, change, and leadership in order they can critique the relevance of this understanding to their business context.
- To enable participants to lead both the formulation and implementation of a change programme demonstrating their ability to work effectively as individuals and as part of a team, resolving problems and communicating clearly.

In addition, the aims of the MSc are:

- To develop the participants capabilities to conduct independent research into an aspect of change management, strategy or leadership in a business context.
- To advance the participants understanding of strategic change to enable them to effectively critique and contribute to the development of their organisation.

This programme is intended for the following range of students:

- For those who have been in management positions in their client organisation or related network for at least 2 years and have relevant experience in organisations for a minimum of 5 years.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Business and Strategic Leadership

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Systematically assess and describe the strategic context of the business and be able to critically comment on the fit between business and functional strategies including finance, organisational structure, culture and values
- ILO 2. Critically evaluate a business's need and readiness for change.
- ILO 3. Develop and apply the personal qualities and skills necessary to assess, influence and manage change; and to operate as an effective team member.
- ILO 4. Demonstrate the ability to integrate knowledge and apply multi-disciplinary approaches to solve real-life business problems and to justify and communicate findings and recommendations with stakeholders in a professional manner.

B. Postgraduate Diploma in Business and Strategic Leadership

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Select, justify, apply and adapt theories, and diagnostic techniques relevant to change, strategy and leadership.
- ILO 6. Develop and demonstrate leadership and advocacy qualities in designing and implementing a cross functional strategic change initiative within a business.
- ILO 7. Communicate clearly in a leadership role in an organisation change management context and to engage with key stakeholder concerns.
- ILO 8. Develop team working skills in themselves and support others to improve the overall performance of a team.

C. MSc in Business and Strategic Leadership

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 9. Demonstrate the ability to identify appropriate management frameworks for an issue or situation under consideration and apply tools and techniques accurately
- ILO 10. Display practical capabilities in self-directed research, data gathering, data analysis and interpretation, report writing and presentation skills
- ILO 11. Produce a high quality thesis and critically evaluate the interpretations of the data and to effectively communicate the results.

4. How is the course taught?

The course is taught with a mixture of lectures, case studies, experiential exercises primarily. The method of teaching includes face to face, use of webinars and webcasts.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications.

A. Postgraduate Certificate Business and Strategic Leadership

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
1-5	50
ELECTIVE MODULES¹:	
One element from 11-17	10
TOTAL:	60

B. Postgraduate Diploma Business and Strategic Leadership

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
1-10	100
ELECTIVE MODULES¹:	
Two elements from 11-17	20
TOTAL:	120

C. MSc Business and Strategic Leadership

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	

¹ The Client agrees which elective modules will be offered to the students during contract negotiations.

1-10 18 19	100 AO 80
ELECTIVE MODULES¹:	
Two elements from 11-17	20
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee); ²
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

As this is a corporate (closed) course elective modules, exact dates and venues have to be agreed with the client.

² Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of $< 40\%$ (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

Given the applied nature of the programme modules take place roughly every 2 to 3 months, exact dates have to be agreed with the organisation. There is no set pattern for the delivery location but at least one module is run at Cranfield and the University aim to facilitate requests for visits to organisations of interest to the client.

Course modules – Barclays Cohort 1

The following modules outline all parts of the programme leading to an **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ³	Total hours delivered by Visiting Lecturers ⁴	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	‘ Residential’ Start Date	‘ Residential’ End Date	Minimum Mark ⁵ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁶ (%) of Independent assessments	Weighting within module of multi-part assessments ⁷ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ⁸	Assessment Submission and/or exam date ⁹	Assessment / Exam Retake date
1	MXS/PD1 Occ G	Personal Development 1	Emma Parry /Jane Trinder	16	15	10	Y		9/10/18	25/7/19	40	ICW	100				31/7/19	
2	MXS/FAC Occ G	Finance and Accounting	Keith Parker	16	15	10	Y		20/03/19	22/03/19	40	ICW	100				07/05/19

4	MXS/OBV Occ G	Organisational Behaviour	Emma Parry /Jane Trinder	16	15	10	Y		22/05/19	24/05/19	40	ICW	100				01/07/19	

³ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁴ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁵ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁶ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁷ For **multi-part assessments** please record the overall weighting of module which should be 100%.

⁸ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

⁹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

7. **How are the ILOs assessed?**

The following assessment types are utilised:

Taught module assessment on the course is predominantly through assignment. Assignments are set by individual module co-ordinators for the certificate and diploma subjects. The thesis is based 100% on the written submission which falls within the University guidelines that an MSc thesis should be >30% of the overall assessment weighting. This weighting will also impress on students the importance of the written thesis and reinforce their understanding that a poor thesis (R&R or failing) cannot be compensated for by an exceptional presentation.

The use of assignments as opposed to exams which require the application of knowledge to their own organisation produces more tangible benefits inside the organisation, and helps to ensure they have moved from knowledge accumulation to learning. The move to splitting assessments for personal development and the group project is to support the need to learn throughout these subjects and ensure application of learning to themselves or the group theme.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10

(Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review

known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

This is a closed corporate course with all participants directly sponsored onto the programme by their organisation. These participants have been selected for capability and leadership development and on completing the course can expect to be promoted to significant and/or senior roles.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information. Courses are under constant review, however, and the University reserves the right, without notice, to withdraw, update or amend this course specification at any time.

COURSE TITLE: MSc in Business and Strategic Leadership (*Zurich Cohort 1*)

Date of first publication/latest revision: October 2018

1. What is the course?

Course information

Course Title	Business and Strategic Leadership
Course code	MSBSLPTC, MSBSSPTC, PDBSLPTC, PCBSLPTC
Academic Year	2017/18
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Part-time
Location of Study	Cranfield
School(s)	School of Management
Theme	Leadership and Management
Centre	CED
Course Director	Neil Turner
Awarding Body	Cranfield University
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	N/A

Registration Period(s) available	MSc - part-time - maximum of 5 years PG Certificate – 3 years PG Diploma – 4 years
Course Start Month(s)	TBC (closed course client determined start date)

Institutions delivering the course

This course is delivered by the Centre for Customised Executive Development, School of Management. The research interests include management, leadership and change management.

This is offered as a closed corporate programme and Cranfield interacts with the client in the following ways:

- Delivery locations are jointly agreed with the client but have to meet Cranfield's requirements
- Core modules are set but in consultation with the client the course can be customised to suit a specific industry or client need through the agreeing pre-scribed electives which the students have to take.
- Students will undertake their research and/or project work off campus, in their own work place.
- Teaching and assessing is provided by Cranfield faculty and Cranfield RTS Associates

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course at Postgraduate Certificate (PgCert), Postgraduate Diploma (PgDip) and MSc entry levels. Exit routes are provided for students at the end of the certificate and diploma for those who wish to access only parts of the course provided.

The aims of the Certificate are:

- To develop participants' knowledge and awareness of business functions and disciplines relevant to being able to analyse a business in preparedness for strategic change.
- To enable participants to develop appropriate knowledge and skills to lead and or participate in the start of a change initiative in their organisation.

In addition, the aims of the Diploma are:

- To enable participants to gain a systematic understanding and apply their knowledge relating to strategy, change, and leadership in order they can critique the relevance of this understanding to their business context.
- To enable participants to lead both the formulation and implementation of a change programme demonstrating their ability to work effectively as individuals and as part of a team, resolving problems and communicating clearly.

In addition, the aims of the MSc are:

- To develop the participants capabilities to conduct independent research into an aspect of change management, strategy or leadership in a business context.
- To advance the participants understanding of strategic change to enable them to effectively critique and contribute to the development of their organisation.

This programme is intended for the following range of students:

- For those who have been in management positions in their client organisation or related network for at least 2 years and have relevant experience in organisations for a minimum of 5 years.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate in Business and Strategic Leadership

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Systematically assess and describe the strategic context of the business and be able to critically comment on the fit between business and functional strategies including finance, organisational structure, culture and values
- ILO 2. Critically evaluate a business's need and readiness for change.
- ILO 3. Develop and apply the personal qualities and skills necessary to assess, influence and manage change; and to operate as an effective team member.
- ILO 4. Demonstrate the ability to integrate knowledge and apply multi-disciplinary approaches to solve real-life business problems and to justify and communicate findings and recommendations with stakeholders in a professional manner.

B. Postgraduate Diploma in Business and Strategic Leadership

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 5. Select, justify, apply and adapt theories, and diagnostic techniques relevant to change, strategy and leadership.
- ILO 6. Develop and demonstrate leadership and advocacy qualities in designing and implementing a cross functional strategic change initiative within a business.
- ILO 7. Communicate clearly in a leadership role in an organisation change management context and to engage with key stakeholder concerns.
- ILO 8. Develop team working skills in themselves and support others to improve the overall performance of a team.

C. MSc in Business and Strategic Leadership

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 9. Demonstrate the ability to identify appropriate management frameworks for an issue or situation under consideration and apply tools and techniques accurately
- ILO 10. Display practical capabilities in self-directed research, data gathering, data analysis and interpretation, report writing and presentation skills
- ILO 11. Produce a high quality thesis and critically evaluate the interpretations of the data and to effectively communicate the results.

4. How is the course taught?

The course is taught with a mixture of lectures, case studies, experiential exercises primarily. The method of teaching includes face to face, use of webinars and webcasts.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 6. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications.

A. Postgraduate Certificate Business and Strategic Leadership

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
1-5	50
ELECTIVE MODULES¹:	
One element from 11-17	10
TOTAL:	60

B. Postgraduate Diploma Business and Strategic Leadership

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
1-10	100
ELECTIVE MODULES¹:	
Two elements from 11-17	20
TOTAL:	120

C. MSc Business and Strategic Leadership

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	

¹ The Client agrees which elective modules will be offered to the students during contract negotiations.

1-10 18 19	100 AO 80
ELECTIVE MODULES¹:	
Two elements from 11-17	20
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that lower award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee); ²
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

As this is a corporate (closed) course elective modules, exact dates and venues have to be agreed with the client.

² Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of $< 40\%$ (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

Given the applied nature of the programme modules take place roughly every 2 to 3 months, exact dates have to be agreed with the organisation. There is no set pattern for the delivery location but at least one module is run at Cranfield and the University aim to facilitate requests for visits to organisations of interest to the client.

Course modules – Zurich Cohort 1 – Occurrence I

The following modules outline all parts of the programme leading to an **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ³	Total hours delivered by Visiting Lecturers ⁴	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	‘ Residential’ Start Date	‘ Residential’ End Date	Minimum Mark ⁵ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁶ (%) of Independent assessments	Weighting within module of multi-part assessments ⁷ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ⁸	Assessment Submission and/or exam date ⁹	Assessment / Exam Retake date
1	MXS/PD1 Occ I	Personal Development 1	Emma Parry /Jane Trinder	16	15	10	Y		TBC	TBC	40	ICW	100				21/10/19	
2	MXS/FAC Occ I	Finance and Accounting	Keith Parker	16	15	10	Y		03/04/19	05/04/19	40	ICW	100				20/05/19	
3	MXS/SMG Occ I	Strategic Management 1	Imran Zawwar	16		10	Y		05/02/19	07/02/19	40	ICW	100				25/03/19	
4	MXS/OBV Occ I	Organisational Behaviour	Emma Parry /Jane Trinder	16	15	10	Y		04/06/19	06/06/19	40	ICW	100				22/07/19	

³ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁴ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁵ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁶ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁷ For **multi-part assessments** please record the overall weighting of module which should be 100%.

⁸ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

⁹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

7. How are the ILOs assessed?

The following assessment types are utilised:

Taught module assessment on the course is predominantly through assignment. Assignments are set by individual module co-ordinators for the certificate and diploma subjects. The thesis is based 100% on the written submission which falls within the University guidelines that an MSc thesis should be >30% of the overall assessment weighting. This weighting will also impress on students the importance of the written thesis and reinforce their understanding that a poor thesis (R&R or failing) cannot be compensated for by an exceptional presentation.

The use of assignments as opposed to exams which require the application of knowledge to their own organisation produces more tangible benefits inside the organisation, and helps to ensure they have moved from knowledge accumulation to learning. The move to splitting assessments for personal development and the group project is to support the need to learn throughout these subjects and ensure application of learning to themselves or the group theme.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

	PgCert				PgDip				MSc		
Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8	ILO9	ILO10	ILO11

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10

(Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review

known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

This is a closed corporate course with all participants directly sponsored onto the programme by their organisation. These participants have been selected for capability and leadership development and on completing the course can expect to be promoted to significant and/or senior roles.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Computational and Software Techniques in Engineering

Date of first publication/latest revision: October 2018

1. What is the course?

Course information

Course Title	MSc in Computational and Software Techniques in Engineering with options in: Computer Aided Engineering (CAE) Computer and Machine Vision (CMV) Software Engineering for Technical Computing (SETC)
Course code	MSCSTFTC, MSCSTPTC, MSSTBFTC (ESTIA variant)
Academic Year	2018/19
Valid entry routes	MSc
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield and Biarritz, France (in respect of the ESTIA variant)
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Computational Engineering Sciences
Course Director	Dr Irene Moulitsas
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Benchmark Statement(s)	Not Applicable
Registration Period(s) available	Full-time MSc - one year, Part-time MSc - up to three years
Course Start Month(s)	September

Institutions delivering the course

This course is delivered by The School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Computational Engineering Sciences where the research interests include:

- Computer Vision
- Vibroacoustics for Condition Monitoring
- Computational Engineering
- High Performance Computing
- Scientific Computing
- Computational Fluid Dynamics

Cranfield University interacts with the following institutions and in the following ways:

A variant of the course is delivered partly at ESTIA, Institute of Technology, an engineering school based in Biarritz, France. ESTIA (École Supérieure des Technologies Industrielles Avancées) has been sending students to study the Cranfield MSc in Computational and Software Techniques in Engineering since 1989. The ESTIA variant allocates 110 credits for the thesis element as opposed to 100 credits for the Cranfield option. This is balanced by ESTIA students not taking the Management for Technology module since the ESTIA thesis option is different requiring the students to undertake industrial internships. Some modules of the course are delivered on-site by Cranfield staff. Students can elect to undertake an individual project locally.

The course has a strong association with a number of EU academic institutions that regularly supply students onto the MSc through the EU Erasmus Programme. Students follow the course as part of a double degree arrangement with their home institution whereby the final year of their five year programme is replaced with the MSc here at Cranfield. Successful completion of the MSc allows the student to graduate from both Universities. The strongest of these associations is with ESTIA. They send typically 30 students each year onto the MSc. ESTIA students can only register for the CAE and CMV options.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is not accredited by any external bodies.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- Equip graduates with the knowledge, understanding and skills required to enable them to meet the demand of an evolving workplace that requires highly qualified engineers possessing

core software engineering skills together with competency in mathematical analysis techniques.

- Develop suitably trained and qualified engineers, scientists and mathematicians enabling them to apply the analytical, computational and software skills to the solution of practical engineering IT problems in industrial, commercial and governmental organisations.

This programme is intended for the following range of students:

- UK students with an honours degree in Engineering, Computer Science, Mathematics, Physics.
- Mature students with at least 5 years relevant industrial experience.
- Students studying at recognised EU Universities with at least 4 years of relevant academic study.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 1. Critically evaluate the selection of computer languages, software tools, and technologies and apply them to help solve practical problems of a computational nature in engineering solutions.
- ILO 2. Create original software solutions to engineering problems using industry standard libraries, packages, and software engineering tools.
- ILO 3. Compose written reports and prepare and deliver oral presentations that effectively communicate proposals, technical developments, and results.
- ILO 4. Plan and implement assigned projects under time pressure, and undertake self-directed learning when necessary.
- ILO 5. Assemble a body of relevant technical literature and discuss and evaluate each work with respect to a technical problem.
- ILO 6. Propose, plan, and implement an independent research project on a relevant technical topic, with limited supervision.
- ILO 7. Critically evaluate project results, discuss findings, and relate their contribution to other works in the field.

4. How is the course taught?

Students will be supported in their learning and personal development by:

- A comprehensive set of carefully prepared lecture notes that form the basis for the teaching. This is perhaps the most valuable resource and reference point for the student starting a new module. Secondly, many lectures are given in conjunction with some form of programming. Students are encouraged, given time and practical assistance to develop their software skills.
- The library resources and search facilities here at Cranfield. A thorough introduction to these resources and demonstrations of information retrieval skills is provided at the beginning of the course. The library facilities are extensive and there is a good representative selection of books and periodicals relevant to the course. Where an article, book or periodical is not available, it can usually be obtained elsewhere via inter-library loans. Books, software and other resources are purchased by the group when it is necessary for one of the projects.

- A programme of seminars given by external and internal speakers is also provided for the Cranfield based students. These reflect the course, sponsoring companies and associated research carried out in the group enabling the students to get an appreciation of related work going on in industry and other universities.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. **Postgraduate Certificate**

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Computer Aided Engineering option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
To accumulate 60 credits from Modules 1-7; 9-11	60
ELECTIVE MODULES:	
None	
TOTAL:	60

Computer Aided Engineering option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
To accumulate 60 credits from Modules 1-7; 9-11	60
ELECTIVE MODULES:	
None	
TOTAL:	60

Computer and Machine Vision option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
To accumulate 60 credits from Modules 1-4, 11-15, 17	60
ELECTIVE MODULES:	

None	
TOTAL:	60

Computer and Machine Vision option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
To accumulate 60 credits from Modules 1-4, 11-15, 17	60
ELECTIVE MODULES:	
None	
TOTAL:	60

Software Engineering for Technical Computing option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
To accumulate 60 credits from Modules 1-4, 18, 20-24	60
ELECTIVE MODULES:	
None	
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Computer Aided Engineering option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
Core Modules 1-4	35
CAE Option: Modules 5-11	65
Dissertation (for PgDip) (25)	20
ELECTIVE MODULES:	
None	
TOTAL:	120

Computer Aided Engineering option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
Core modules 1, 2, 4	25
CAE Option: Modules 5-11	65
Dissertation ESTIA (for PgDip) (26)	30

ELECTIVE MODULES:	
None	
TOTAL:	120

Computer and Machine Vision option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
Core modules 1-4	35
CMV Option: Modules 11-17	65
Dissertation (for PgDip) (25)	20
ELECTIVE MODULES:	
None	
TOTAL:	120

Computer and Machine Vision option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
Core modules 1, 2, 4	25
CMV option modules 11-17	65
Dissertation ESTIA (for PgDip) (26)	30
ELECTIVE MODULES:	
None	
TOTAL:	120

Software Engineering for Technical Computing option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
Core modules 1-4	35
SETC option modules 18-24	65
Dissertation (for PgDip) (25)	20
ELECTIVE MODULES:	
None	
TOTAL:	120

C. MSc

Students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Computer Aided Engineering option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	

Core Modules 1-4	35
CAE Option: Modules 5-11	65
Individual Research Project (27)	100
ELECTIVE MODULES:	
None	
TOTAL:	200

Computer Aided Engineering option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
Core modules 1, 2, 4	25
CAE Option: Modules 5-11	65
Individual Research Project (28)	110
ELECTIVE MODULES:	
None	
TOTAL:	200

Computer and Machine Vision option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	
Core modules 1-4	35
CMV Option: Modules 11-17	65
Individual Research Project (27)	100
ELECTIVE MODULES:	
None	
TOTAL:	200

Computer and Machine Vision option, based at ESTIA

Description	Credits
COMPULSORY MODULES:	
Core modules 1, 2, 4	25
CMV Option: Modules 11-17	65
Individual Research Project (28)	110
ELECTIVE MODULES:	
None	
TOTAL:	200

Software Engineering for Technical Computing option, based at Cranfield

Description	Credits
COMPULSORY MODULES:	

Core modules 1-4	35
SETC option modules 18-24	65
Individual Research Project (27)	100
ELECTIVE MODULES:	
None	
TOTAL:	200

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in September and are expected to complete the course within 11 calendar months. ESTIA students register for the course in September and are expected to complete the course within 11 calendar months.

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

This course is also offered on a part-time basis. Students would instead take two to three years to complete the MSc.

Each module is taught over a period of one or two weeks. Practical work forms an important part of the teaching and so a significant amount of time is devoted to hands-on sessions with a software package or development environment. This also facilitates independent learning on the part of the student.

Course modules

The following modules outline all parts of the programme leading to MSc. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-CST-C++P04	C++ Programming	Dr Irene Moulitsas	32		10	Y	24/09/18	24/09/18	05/10/18	40	Integrated Assessment GCW	100				FT 03/12/18 PT 17/12/18)	At the next available opportunity which may not be until the course runs the following year
2	N-CST-CM	Computational Methods	Dr Irene Moulitsas	31		10	Y	24/09/18	24/09/18	05/10/18								

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. Students can expect to have between five and seven written examinations, between eight and nine pieces of assessment by submitted work and two to three elements of assessment by presentation or viva.

This approach has been adopted in order to provide the student with a balanced mix of theory and application. Since in this course practical application is key to development of understanding and skills acquisition, the majority of subjects are assessed by a combination of assignment and written exam or purely by assignment. A few subjects that have large theory content are assessed solely by exam. Application of the knowledge and its understanding is also assessed through the thesis project.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. MSc

The Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7
01	ICW	ICW	ICW		ICW		ICW
02	ICW	ICW	ICW		ICW		ICW

Two modules with a combined assessment	Requirements Analysis and System Design (22) Software Testing and Quality Assurance (23)	ICW	100

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by

and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

This Masters course in 'Computational and Software Techniques in Engineering', with its blend of skills-based and subject-specific material equips students with the generic hands-on skills and up-to-date knowledge adaptable to the wide variety of applications in the general field of computational engineering.

Typically students seek employment in the engineering software market. Enquiries regarding availability of potential employees are received from many quarters, both in the EU and elsewhere. There is considerable demand for personnel with expertise in engineering software development and for those who have strong technical programming skills in industry standard languages and tools. Graduates of the course, in demand by CAD vendors, commercial engineering software developers, automotive, telecommunications, medical and other industries and research organisations, have been particularly successful in finding long-term employment.

Some students may go on to register for PhD degrees, many, on the basis of their MSc research project. Thesis topics are most often supplied by individual companies on in-company problems with a view to employment after graduation - an approach that is being actively encouraged by a growing number of industries.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award of Cranfield University. This version of the course specification has been approved by Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: MSc in Computational Fluid Dynamics

Date of first publication/latest revision: October 2016

1. What is the course?

Course information

Course Title	MSc in Computational Fluid Dynamics
Course code	MSCFDFTC, MSCFDPTC, PDCFDFTC, PDCFDPTC, PCCFDFTC, PCCFDPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	Not Applicable
Mode of delivery	Full-time, Part-time
Location(s)¹ of Study	Cranfield University
School(s)	School of Aerospace, Transport and Manufacturing
Theme	Aerospace
Centre	Centre for Fluid Mechanics and Computational Science
Course Director	Dr Antonios Antoniadis
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ Level 7 (Masters)
Benchmark Statement(s)	Not Applicable
Registration Period(s)	Full-time MSc - one year, Part-time MSc - up to three years, Full-time

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

available	PgDip - one year, Part-time PgDip - two years, Full-time PgCert - one year, Part-time PgCert - two years
Course Start Month(s)	October

Institutions delivering the course

This course is delivered by the School of Aerospace, Transport and Manufacturing, Aerospace Theme, Centre for Fluid Mechanics and Computational Science, where the research interests include:

- Fluid dynamics of single phase, multi-phase and multi-species flows.
- Steady and unsteady aerodynamics.
- Transition and turbulence.
- Heat transfer.
- Numerical methods development.
- Scientific and high performance computing.
- Computational fluid dynamics with the applications in aerospace, automotive, environmental, energy, micro and nanotechnology, nuclear, bio-medical, chemical and defence sectors.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

This course is accredited formally by the Institution of Mechanical Engineers (IMechE) until September 2020 and the Royal Aeronautical Society (RAeS) until September 2020.

2. What are the aims of the course?

Cranfield University offers this course in order to:

- Provide a comprehensive training programme in Computational Fluid Dynamics (CFD) which will enhance the skills of the graduate student through a detailed introduction to the fundamentals of CFD together with an insight into the applications of CFD.
- Provide a unique opportunity for cross-disciplinary education and knowledge transfer in the computational fluids engineering via integration of a very broad range of applications into course curriculum.
- Produce graduates capable of solving computational fluid problems in a broad range of engineering areas, delivering high standard of computational expertise to a diverse range of employers.
- Provide a CPD opportunity through the part-time course option for qualified engineers wishing to extend their knowledge of CFD or incorporate CFD into their practice.

Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) are provided for students who wish to access only parts of the course.

This programme is intended for the following range of students:

- Recent graduates wishing to extend their knowledge and skills in the above areas.
- Qualified engineers wishing to apply their skills in new areas.
- Qualified engineers working with CFD in a particular area wishing to extend their knowledge and enhance their practice by knowledge transfer from different application areas.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO 1. Demonstrate a critical awareness of the governing equations of fluid mechanics, and their mathematical properties, in various formulations for compressible and incompressible inviscid and viscous flows.
- ILO 2. Demonstrate a critical awareness of the underlying principles of numerical analysis, concepts of stability, approximation and convergence and the numerical solution of systems of algebraic equations.
- ILO 3. Demonstrate a critical awareness of different state-of-the-art CFD methods as used in engineering practice and research and development for both incompressible and compressible flows.
- ILO 4. Demonstrate a systematic application of the principles and understanding of limitations of techniques for the simulation of turbulent and transitional flows and thus be able to apply these in a critical manner to practical applications.
- ILO 5. Recognise the potential sources of, and discriminate between, error and uncertainty in numerical simulations. Be aware of the tools that are available for the quantification of error and uncertainty in computational simulations. Be able to plan and perform credible computational simulations.

B. Postgraduate Diploma

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 6. Demonstrate a systematic application of the requirements of grid generation for CFD applications and alternative techniques for the visualisation and interpretation of CFD results.
- ILO 7. Demonstrate their acquired skills in applying commercial CFD software packages to practical engineering applications.
- ILO 8. Demonstrate a systematic application of the use of CFD to practical scientific and engineering fluid flow problems with the focus on planning, conducting and reporting upon a critical analysis of one or more aspects of Computational Fluid Dynamics.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO 9. Demonstrate a systematic approach of research and application, where the challenges associated with a particular topic of research are addressed with novelty arising from the taught material, and through state of the art approaches found in the literature of the corresponding subject.

4. How is the course taught?

Students will be supported in their learning and personal development by:

The course material is delivered through a combination of lectures, tutorials and hands-on lab sessions. Where possible lectures feature a strong interactive element. In addition, several modules have a guest industrial speaker who specialises in that field in industry.

Assignments should be noted separately in the description of the course teaching methods. The assignments the students are required to complete (15 in total) are used not only as means of summative assessment but also as means of formative assessment guiding the students through various aspects of Computational Fluid Dynamics via the application of techniques learned to practical problems.

The learning support builds on the standard mechanisms provided by the University including library facilities, specialised IT provision (Linux workstations) etc. The course uses the Blackboard virtual learning environment with all materials delivered in electronic form and electronic communication tools (e.g. forums) used to enhance the discussion of the course materials.

In addition to standard learning support facilities the course utilises a number of specialised facilities, namely:

- A dedicated HPC cluster used in the taught component and thesis work
- NFLC Jetstream plane used in taught component to illustrate aircraft manoeuvres
- Windtunnel facilities used for demonstrations

Group assignments and lab sessions are designed to enhance transferable skills related to teamwork and communication.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules 1, 2, 3, 4, 5 or 6, 7	60
ELECTIVE MODULES:	
n/a	0
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-8 Dissertation (17)	75 20
ELECTIVE MODULES:	
Modules: 9-15 select 25 credits from 10 & 11; 9 & 13; 12; 14; 15.	25
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-8 Research Project (16)	75 100
ELECTIVE MODULES:	
Modules: 9-15 select 25 credits from 10 & 11; 9 & 13; 12; 14; 15.	25
TOTAL:	200

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;
- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of <40% (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award (<50%).

- award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
- if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
- it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full-time students register for the course in October and are expected to complete the course within 12 calendar months. The taught component runs from October until May. Individual research project runs from April until August.

Part-time students register for the course in October and are expected to complete the course within 2 or 3 years selecting the modules to be taken each year in consultation with the Course Director.

A 10 credit module or two 5-credit modules are usually taught over a week leaving the next week free for assignments and independent learning and reflection.

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment							
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates	
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date
1	N-CFD-IFM	Introduction to Fluid Mechanics and Heat Transfer	Dr Laszlo Konozszy	20		10	N		08/10/18	12/10/18	40	ICW	100				FT 02/11/18 PT 16/11/18	
2	N-CFD-NMPDE	Numerical Methods and High Performance Computing	Dr Antonios Antoniadis	30		10	N		22/10/18	26/10/18	40	ICW	100				FT 18/11/18 PT 02/12/18	

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is $\geq 50\%$. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS - thesis

7. How are the ILOs assessed?

The following assessment types are utilised:

The course uses a range of assessment types. In the MSc route, students are assessed through 5 written examinations, 15 assignments and 1 element of assessment by presentation or viva.

This approach has been adopted in order to achieve a careful balance between the delivery of fundamental knowledge which is better assessed through a written examination and development of CFD skills and expertise through practical assignments.

Majority of the assignments utilised in the course are based on practical CFD problems with emphasis on developing CFD skills and critical evaluation capability. Group assignments are designed to facilitate development of team working skills.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate

The Postgraduate Certificate has a total of 60 credits, there are two elective modules (either 5 or 6), to be selected by the candidate upon registration.

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5
1	ICW				
2		ICW			
3		ICW			
4		ICW			ICW
5	ICW	ICW	ICW		
6	ICW	ICW	ICW		

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5
7	ICW	ICW	ICW	ICW	

B. Postgraduate Diploma

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8
3		ICW				ICW		
8		ICW	ICW					
9						GCW	GCW	GCW
10						GCW	GCW	GCW
11						GCW	GCW	GCW
12						GCW	GCW	GCW
13						GCW	GCW	GCW
14						GCW	GCW	GCW
15						GCW	GCW	GCW
17					I PROJ OR	I PROJ OR	I PROJ OR	I PROJ OR

C. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO8	ILO9
16	THESIS OR	THESIS OR

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10 (Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

Based on feedback from 2014/15 graduates, 90% of our graduates are in a full-time employment in industry or academia within 6 months of the course completion. Our graduates are employed in a broad range of industries where computational expertise is required. Currently our graduates are employed among others by aerospace, computer hardware, automotive, measurement equipment, mining, process systems and engineering consultancy companies. A proportion of our graduates pursue careers in academia through further PhD studies.

COURSE SPECIFICATION

Cranfield University: Course Specifications

Course specifications outline the content and structure of a course leading to an award from Cranfield University. This version of the course specification has been approved by the Education Committee and every effort has been made to ensure the accuracy of the information.

COURSE TITLE: Cyber-Secure Manufacturing

Date of first publication/latest revision: July 2018

1. What is the course?

Course information

Course Title	Cyber-Secure Manufacturing
Course code	MSCMIFTC, MSCMIPTC, PDCMIFTC, PDCMIPTC, PCCMIFTC, PCCMIPTC
Academic Year	2018/19
Valid entry routes	MSc, PgDip, PgCert
Additional exit routes	PgDip, PgCert
Mode of delivery	Full-time / Part-time
Location(s)¹ of Study	Cranfield
School(s)	School of Aerospace, Transport, and Manufacturing
Theme	Manufacturing
Centre	Manufacturing Informatics Centre
Course Director	Dr Hongmei He
Awarding Body	Cranfield University
Is this an AP Contract course?²	No
Teaching Institution	Cranfield University
Admissions body	Cranfield University
Entry requirements	Standard University entry requirements
UK Qualifications Framework Level	QAA FHEQ level 7 (Masters)
Benchmark Statement(s)	N/A
Registration Period(s) available	Full-time MSc/PgDip/PgCert - one year Part-time MSc/PgDip – two or three years, Part-time PgCert – two years.

¹ If any part of this course is delivered at another site, please note which one(s) here

² AP Contract courses are provided by Cranfield University to the MoD as part of the Academic Provider contract

Course Start Month(s)	October (FT and PT)

Institutions delivering the course

This course is delivered by School of Aerospace, Transport, and Manufacturing, Manufacturing Theme, Manufacturing Informatics Centre where the research interests include:

The research of Manufacturing Informatics Centre focuses on new and emerging Information and Communications Technology (ICT) and methodologies for next-generation manufacturing, enabled by IoT technologies. Cybersecurity for manufacturing is one of our main research areas in the Manufacturing theme. Dr Hongmei He, Prof Tetsuo Tomiyama, Dr Christos Emmanouilidis, Professor Raj Roy, etc. have been engaging the research of cybersecurity and IoT security, and working with industry for relevant projects. The course team has long experience in applying research results to underpin the teaching. Hence, our research in cybersecurity will also underpin the new MSc course.

Cranfield University remains fully responsible for the quality of the delivery of the course.

Accreditation by Public, Statutory or Regulatory Bodies (PSRBs)

Accreditation will be sought for IET, IMECHE, BCS and RAES which already accredit other Manufacturing courses. There are also plans to seek accreditation from GCHQ and the Institute of Information Security Professionals.

2. What are the aims of the course?

The aim of the course is to develop the next generation of manufacturing engineers who are able to protect manufacturing systems & machines against cyber threats.

The objective is to enable students to use cutting-edge technologies in IoT, Big Data, Cloud Computing and Cybersecurity to

- Identify cyber threats to cyber-physical systems in the manufacturing sector
- Protect manufacturing systems from cyber attacks
- Improve incident response and disaster recovery in manufacturing systems
- Assess the cost of cybersecurity solutions for manufacturing systems

This programme is intended for the following range of students:

Graduates from computer science, manufacturing and engineering and industry professionals who are able to work at Masters Level

Especially, professionals from manufacturing and engineering industry or organisation, who want to update their knowledge and skills in cyber security, data analysis, IoT and cloud manufacturing, may wish to take the part-time study for the MSc course or take some short courses from the MSc courses.

3. What should students expect to achieve in completing the course?

Award intended learning outcomes (ILOs) (skills and knowledge).

A. Postgraduate Certificate (PgCert)

In completing this course, and achieving the associated award, a diligent student should be able to:

- ILO1 Analyse traditional and modern manufacturing environments and their operations, and evaluate their engineering challenges with regards to cybersecurity.
- ILO2 Analyse hardware and system architectures (e.g. for IoT devices), and create security metrics, including vulnerabilities, threats, risks and solutions to improve the cyber security of manufacturing systems.
- ILO3 Evaluate cloud architecture, properties, management services, security challenges and risks associated with different cloud deployment models.
- ILO4 Evaluate advanced technologies to retrieve data from cloud and discover new information from big data, and manage data protection in cloud manufacturing.
- ILO5 Setup up-to-date technologies and simulations to detect and prevent system intrusion, improve incident response and disaster recovery, assess cyber risks.
- ILO6 Estimate the cost of cyber security solutions for the protection of machines and equipment in manufacturing systems.

B. Postgraduate Diploma (PgDip)

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO7 Develop models with cutting-edge data mining technologies to identify cyber threats, and evaluate the performance of the technical models for solving data-driven cyber-security issues.
- ILO8 Analyse problems in the real world through investigative methods, systems thinking and anticipating futures to adapt to the fast changes of cyber –secure manufacturing environments.
- ILO9 Identify research questions, develop project objectives and deliverables, and plan and execute a work programme with reference to key project management processes.
- ILO10 Select and justify methodologies to solve real world problems in manufacturing and/or cyber security for manufacturing, and collect & analyse data, review and critically analyse literature, generate conclusions.

C. MSc

In addition to the intended learning outcomes outlined above, a diligent student would also be expected to:

- ILO11 Undertake and present independent research on a relevant topic, demonstrating the ability to conduct original investigations, test ideas, validate results and reach appropriate conclusions.

4. How is the course taught?

The main forms of teaching for the course are lecturing and lab sessions, plus a number of industry seminars. Each module will be assessed through exam or assignment (see the table of course modules in page 8).

In order to help students understand the new concepts and master new techniques, Enquiry-Based Learning (EBL) activities (e.g. group discussion, group poster, group presentation, case study, etc.) in class is another form of learning activities for selected modules, and the group work will be guided by the module leader.

- Modules will be live on Blackboard two weeks prior to the start date of the module to allow pre-reading
- Group discussion will allow students in groups to explore a specific topic or solve a problem with the learned knowledge, technology and/or methodologies, and the evaluation or comments of the group work will be given by another group. This will help students understand the new technologies.
- Group poster: Each group of students is given a topic or real problem to be solved, and the group work will provide a solution through a poster, and the final evaluation/comments of the poster will be given by other groups.
- Group presentation: Each group of students is required to read the latest research paper in relevant area, and a group presentation will be provided. Other groups of students will question on the presentation. This will require students not only understand the latest research methodology, but also identify possible gaps and possible improvement.
- Case study: given a real problem, the lecturer will demonstrate how to use the introduced knowledge, technologies or methodology to solve the real problem through more interaction with students

For full time students, after completing all 8 modules, they will join a group project and complete an individual research project. All group or individual projects are coordinated with the Manufacturing Systems and Management programme. Each project will be supervised by a member of academic staff, also guided by an industry supervisor if it is an industry project.

For part time PgDip/MSc students, the dissertation module (9-PT) should be taken after completing the three core modules: 01, 04, 07 (see the part-time learning path in page 6), and the individual research project should be taken after completing all the 8 modules.

Support for part-time students

Part-time students will be advised by the course director for scheduling their course study before they start, and during their course study.

The leader(s) of each module will answer PT students' query before and during their module study through meetings, emails, telephone or skype.

Module leader(s) will arrange an accessible tutorial two weeks after the module.

5. What do students need to achieve in order to graduate?

Notwithstanding University Regulations and the authorities and powers exercised by examiners, students will normally need to demonstrate achievement in the elements of the course, as laid out in Section 7. Courses are structured through the accumulation of credit, where 1 credit represents 10 notional learning hours.

In brief, students will normally need to achieve the following in order to be awarded the qualifications:

A. Postgraduate Certificate

The accumulation of 60 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1, 3, 4 and 7	40

ELECTIVE MODULES:	
Select 2 from Modules 2, 5, 6 and 8	20
Recommended	
Module 0: Induction	0
TOTAL:	60

B. Postgraduate Diploma

The accumulation of 120 credits (or more) through the assessment of taught modules as detailed below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-8	80
Module 9: 9-FT Group Project (or Module 9-PT: Dissertation)	40
Recommended	
Module 0: Induction	0
TOTAL:	120

C. MSc

In addition to the requirement for the Postgraduate Diploma outlined above, students must successfully complete the thesis. An MSc will be awarded on successful completion of 200 credits as outlined below:

Description	Credits
COMPULSORY MODULES:	
Modules: 1-8	80
Module 9: 9-FT Group Project (or Module 9-PT: Dissertation)	40
Module 10: Individual Research Project	80
Recommended	
Module 0: Induction	0
TOTAL:	200

If a student does not meet the required standards for the award, the examiners for the programme may decide to offer a lower award associated with the programme, providing that a lower exit award exists and the student meets the requirements of that award.

Pass Criteria

The University operates standard pass criteria which can be found in the Senate Handbook on Assessment Rules.

In order to achieve your award, you are required to achieve:

- An overall average mark of $\geq 50\%$;
- An average mark of $\geq 50\%$ across the taught assessment;

- All assessments need to be completed and the minimum mark attained: no more than one failure to complete an assessment (as defined in Section 2.3) will be permitted throughout the course of your studies (Please note that the board of examiners does not have discretion to overrule this limit, but can refer a case to Senate's Education Committee);^{3 4}
- **For Taught Assessments**, the minimum mark for each individual taught assessment on the first attempt for the significant majority of the taught assessments, noting that:
 - if you fail to attain the minimum mark for **up to 30 learning credits**, you will be permitted to re-take all of those assessments (except for circumstances where a resit award capped at 50% would be insufficient to achieve an overall average mark of $\geq 50\%$ across the taught assessments);
 - if, having failed to attain the minimum mark for 30 learning credits, you fail to obtain the minimum mark for **any additional learning credits** over the course of your studies you will be disqualified from the right to re-take the assessments: this will normally result in intended award failure. (Please note the board of examiners may at its discretion overrule this limit, but this is not an automatic right);
 - it is not permissible for you to fail an elective module and then proceed to take a different elective module in its place.
- **For Substantial pieces of assessment** (corresponding to ≥ 40 credits, which are not part of the taught assessment average), the pass mark of $\geq 50\%$ (where they exist);
- **For the thesis**, a mark of $\geq 50\%$ in order to receive a pass (where it exists).

6. How is the course structured?

Full time MSc/PgDip/PgCert students register for the course in October of each academic year and are expected to complete the course within 12 calendar months.

The course includes 8 taught modules, group project (for PgDip and MSc students) for F/T students or dissertation for P/T students and an individual research project (for MSc students). Each taught module will be taught over one week with further self-study required, and will be assessed by exam or coursework.

The learning path for the part time students is outlined hereafter.

A. Part-time PgCert

Part-time PgCert students have to complete 6 taught modules as required in Section 5.A over a period of 2 years. Induction is strongly recommended and can alternatively be delivered via the VLE. The learning path of PgCert is illustrated in the following table:

Year 1	Year 2

³ For students who were registered before 1 August 2015, the requirement to obtain a minimum mark for a taught assessment will not apply for taught assessment taken before 31 August 2015 (unless the assessment was designated as a "key assessment" under the previous Assessment Rules).

⁴ Providing the minimum mark is met, a mark of 40-49% will be automatically compensated if a student's overall average taught assessment mark (including the failed assessment) is greater than 50%. Students are advised, however, that they retain the right to re-take an assessment with a mark of $< 40\%$ (but should note that a re-take attempt will be capped at 50%), as long as they haven't failed more than 30 credits. At the discretion of the Board of Examiners or by Board of Examiners Chair's Actions a student may be permitted a re-take attempt of modules in the range of 40-49% only if the average mark of their other taught modules would not allow them to qualify for their award ($< 50\%$).

Successful completion of three modules, including two core modules and an optional module: • 01 Modern Manufacturing and Security Challenges • 03 Secure IoT and System Architecture • A module to be decided with the course director	Successful completion of three modules, including two core modules and one optional module: • 04 Secure Cloud Manufacturing • 07 Security of Machine Tool Systems • A module to be decided with the course director

B. Part-time PgDip

Part time PgDip students have to complete 8 taught modules and a dissertation as required in Section 5.B over a period of 3 years. Induction is strongly recommended and can alternatively be delivered via the VLE. Two scenarios depending on the length of studies:

2 years study plan	3 years study plan
1st year: Successful completion of four modules (three core and one elective) and a Dissertation: • 01 Modern Manufacturing and Security Challenges • 04 Secure Cloud Manufacturing • 07 Security of Machine Tool Systems • A module to be decided with the course director • Module 9-PT (Feb– Aug) (PgDip)	1st years: Successful completion of three modules: • 01 Modern Manufacturing and Security Challenges • 03 Secure IoT and System Architecture • A module to be decided with the course director
2nd year: Successful completion of remaining modules as required in Section 5.B for PgDip.	2nd year: Successfully completion of the two modules and a Dissertation as below: • 04 Secure Cloud Manufacturing • 07 Security of Machine Tool Systems • Module 9-PT (Feb – Aug.) (PgDip)
	3rd year: Successful completion of the remaining modules as required in Section 5.B for PgDip.

C. Part-time MSc

Part time MSc students have to complete 8 taught modules, dissertation and individual research project as required in Section 5.C over a period of 3 years. Induction is strongly recommended and can alternatively be delivered via the VLE. Two scenarios depending on the length of studies:

2 years study plan	3 years study plan

1st year: Successful completion of four modules (three core modules and one elective) and a Dissertation : • 01 Modern Manufacturing and Security Challenges • 04 Secure Cloud Manufacturing • 07 Security of Machine Tool Systems • a module to be decided with the course director • Module 09-Dissertation (Feb – Aug.) (MSc)	1st years: Successful completion of four modules: • 01 Modern Manufacturing and Security Challenges • 03 Secure IoT and System Architecture • 07 Security of Machine Tool Systems • A module to be decided with the course director
	2nd year: Successful completion of two modules and an individual dissertation: • 04 Secure Cloud Manufacturing • 06 Data Mining Technology for Cyber Threat Identification • Module 09-Dissertation (Feb – Aug.) (MSc)
2nd year: Successful completion of remaining modules as required in Section 5.C for MSc Completion of individual research project (Feb – Aug) (MSc)	3rd year: Successful completion of the remaining modules as required in Section 5.C for MSc Completion of individual research project (Feb – Aug) (MSc)

Course modules

The following modules outline all parts of the programme leading to **MSc**. Other awards associated with the course include some or all of these modules.

Module Number	Module code	Title	Module Leader	Contact hours ⁵	Total hours delivered by Visiting Lecturers ⁶	Credits	Is the module shared? Y/N	Calendar			Assessment								
								Module Start Date (eg Pre-course task)	' Residential' Start Date	' Residential' End Date	Minimum Mark ⁷ - 40% or 50%	Independent Assessment		Multi-part Assessment			Submission dates		
												Type of Assessment	Weighting within module ⁸ (%) of Independent assessments	Weighting within module of multi-part assessments ⁹ (100%)	Type of Assessment	Weighting of individual elements of multi-part assessment ¹⁰	Assessment Submission and/or exam date ¹¹	Assessment / Exam Retake date	
0	I-MAN-INWK	Induction	Dr Konstantinos Salonitis	22		0	Y	25/09/18	25/09/18	29/09/18	N/A	AO	N/A	N/A	N/A	N/A	N/A	N/A	N/A
1	I-CMI-MMSC	Modern Manufacturing and Security Challenges	Prof Tetsuo Tomiyama	32	4	10	N	8/10/18	8/10/17	13/10/18	50	EX	100					w/c 10/12/18	Sept 2019

⁵ Please note that all contact hours are indicative and represent scheduled teaching, which is subject to minor changes and variation at short notice

⁶ Visiting Lecturer = a member of staff (with RTS) but not on a permanent contract (does not include those acting as occasional guest speakers)

⁷ A mark of 50% is required to pass the assessment however, where the stated minimum mark is 40%, a mark of 40-49% may be compensated by good performance in other modules providing that the overall average is ≥50%. This will be at the Board of Examiners discretion.

⁸ For **independent assessments** please record type and weighting of each separate piece of assessment individually.

⁹ For **multi-part assessments** please record the overall weighting of module which should be 100%.

¹⁰ Failure to submit an element of a **multi-part assessment** will **not** require remedial action if the absence of the marks for the assignment still results in a pass for the assessment (whether 40 or 50% as appropriate). If, however, the absence of marks fails to meet the minimum mark for the module then **all** elements of the assessment must be re-taken.

¹¹ Please ensure you include submission dates for both FT and PT students and that you give details of the submission date for each individual element of a multi-part assessment.

Assessment Types: AO – Attendance only; ICW – Individual Coursework; GCW – Group Coursework; IPRES – Individual Presentation; GPRES – Group Presentation; IPRAC – Individual Practical; GPRAC – Group Practical; IPROJ – Individual Project (>20 credits); GPROJ – Group Project (>20 credits); EX – Examination; RP – Reflective Portfolio; OR- Viva Voce examination; THESIS – thesis; MULTI – Multi-part Assessment

7. How are the ILOs assessed?

The following assessment types are utilised:

Exam, coursework, group presentation, oral presentation, thesis and group project report or work-based dissertation

This approach has been adopted because:

Question papers are used primarily to assess knowledge, understanding and cognitive skills, such as reasoning, analysing and evaluating, while an assignment is a problem solving task with clear guidelines and structure. The modules are at QAA FHEQ level 7 (Masters), and will be assessed by a combination of question papers and coursework assessments. To assess the ILOs, each module has been assigned different assessment approaches based on the features of modules. For example, the modules of “Modern Manufacturing and Security Challenges”, “Operations Management” and “Data Mining Technology for Cyber Threat Identification” will be assessed through exam. The modules “Secure Cloud Manufacturing”, “Secure IoT and System Architecture”, “Secure Cloud Manufacturing”, “Manufacturing System Engineering”, “Security of Machine Tool Systems” are assessed with coursework, and “Cyber Thinking & Practice in Manufacturing” is assessed through group presentation and individual course work.

Assessment and ILO Mapping

Complete the grid below by inserting in the boxes which assessments from the modules directly assess the Award ILOs.

(Module numbers should correspond with those used in the Course module table above.)

A. Postgraduate Certificate (PgCert) & Postgraduate Diploma (PgDip)

Award ILOs Module No.	PgCert						PgDip			
	ILO1	ILO2	ILO3	ILO4	ILO5	ILO6	ILO7	ILO8	ILO9	ILO10
1	EX									
3		ICW			ICW	ICW				
4			ICW	ICW			ICW			
7		ICW	ICW		ICW	ICW		ICW		
2	EX									
5	ICW				ICW					
6				EX			EX			
8	MULTI			MULTI		MULTI		MULTI		
9-FT								MULTI	MULTI	MULTI
9-PT								MULTI	MULTI	MULTI

Modules 2,5,6,8 are elective for PgCert students.

PgDip Students should take all 8 modules plus the group project for FT students and the dissertation for PT students.

B. MSc

In addition to those outlined above, the Award intended learning outcomes are assessed by the following module assessments:

Award ILOs Module No.	ILO8	ILO9	ILO10	ILO11
10	THESIS	THESIS	THESIS	OR THESIS

CROSS-MODULAR ASSESSMENT (including any assessment which rests outside an individual module)

Title	Modules Covered	Assessment	
		Type	Weight (%)
N/A	N/A	N/A	N/A
		N/A	N

8. How will the University assure the quality of the provision?

New course proposals are reviewed by a Course Validation Panel, comprising at least the following membership: normally one subject matter expert external to the School or University, at least 3 academic staff not associated with the proposal. The Panel may include 1 member of professional staff. Panels are supported by an appropriately trained Secretary who acts as advisor to the Panel. Proposals are reviewed in line with the Quality Assurance Agency for Higher Education (QAA) Quality Code, in particular Chapter B1 (Programme Design and Approval) and in the case of partnership arrangements in accordance with Chapter B10

(Managing Higher Education with Others). New courses are ultimately approved by the University's Education Committee, on behalf of Senate.

Course changes are approved by the School's Director of Education on behalf of Education Committee and Senate. Significant changes to a course will be referred to a Course Review Panel at the discretion of the Director of Education.

The University has in place regular monitoring procedures for quality assurance including an Annual Reflective Review for each course and an in depth 6 year review of each School's (total) educational provision known as the Senate Review.

Each course has at least one External Examiner who monitors all aspects of the assessment process. This is in line with the guidance provided by the QAA particularly in Chapter B7 (External Examining) which emphasises that external examining is one of the principal means for maintaining UK threshold academic standards within autonomous higher education institutions.

Each course has a formally constituted Examination Board, which includes the External Examiner, and which is responsible for ensuring that awards are made within the Regulations of the University and that students are made awards on the basis of meeting the specified Intended Learning Outcomes of a course at the appropriate standard.

Each course has a formally constituted Course Committee which meets at least twice a year to discuss, inter alia, programme design and planning, the student experience (including feedback) and student progress.

Each course has an Industry Advisory Panel (or similar) which meets at least once a year to engage with external stakeholders on curriculum design and currency of course content.

Student feedback both qualitative and quantitative is collected for each module studied. In addition students are invited to participate in the University's annual New Student Survey and Student Satisfaction Survey along with the annual national Postgraduate Taught Student Experience Survey. The results of all feedback are considered by the Course Committee and additionally, in respect of the University and national surveys, issues of quality are considered by and acted on where appropriate by the Education Committee, Senate, School and University Executives.

New Partnership arrangements are considered in two stages:

1. The University Executive is responsible for ensuring appropriate due diligence has been undertaken in respect of the University's legal, financial, reputational and ethical responsibilities.
2. A Partnership Delivery Approval Panel then considers whether the proposal meets the expectations and indicators of sound practice of the QAA Quality Code Chapter B10: Managing Higher Education Provision with Others, with regards to the management and operation of the partnership and that the academic standards and the quality of the student experience are assured in line with the remaining chapters of the QAA Quality Code. The delivery of new partnership provision is ultimately approved by the University's Education Committee, on behalf of Senate.

Year one partnership reviews are undertaken one year after the initiation of a new partnership involving academic (award bearing) provision. The aim is to provide a supportive framework to assist the Sponsoring School and its new Partner Institution to work collaboratively to ensure that: the learning and teaching provision and associated student experiences are of a high standard; and that those responsible for delivering the provision are undertaking their respective roles and responsibilities in an appropriate way.

As part of the regular monitoring procedures for established collaborative partnerships, in addition to the Annual Reflective Review there is an Annual Operating Statement and a 5 year review known as a Focused Review which looks at each partnership in depth. Occasional site inspection visits are also made.

9. What opportunities are graduates likely to have on completing the course?

With the capacity and ability, our graduates can undertake the jobs in manufacturing informatics and engineering, cyber security, IoT, Cloud Computing, Big Data Analytics, after the completion of the degree course. For PT students who are already working, such a course could help them change the role in their work, leveraging the knowledge and skills gained on the MSc, to progress in their careers.

Jobs in Manufacturing Informatics and Manufacturing Engineering: conducted by labour market analytics and consulting firm Burning Glass¹², in the future, engineering & advanced manufacturing is one of main job markets that graduates are looking to. On completion of the Master's degree course, our students will be able to protect future manufacturing systems against cyber-attacks.

Jobs in Cybersecurity: With growing concerns about network vulnerability, the demand for cyber security experts is growing at 12 times the overall job market, according to Burning Glass¹³. The Cybersecurity Challenge UK is working with businesses to deliver two pilot schemes – a Cybersecurity mentoring scheme and a series of ‘cyber camps’, to promote career opportunities in the businesses involved and the wider cybersecurity profession¹⁴. The cyber security market size is estimated to grow from USD 122.45 Billion in 2016 to USD 202.36 Billion by 2021, at a Compound Annual Growth Rate (CAGR) of 10.6% during the forecast period. 2015 is considered to be the base year while the forecast period is 2016–2021¹⁵.

Jobs in IoT: While today there are just 300,000 developers contributing to the IoT, a new report from VisionMobile (<http://www.visionmobile.com/>) projects a market requiring 4.5 million developers by 2020, reflecting a 57% compound annual growth rate and a massive market opportunity¹⁶.

¹³ The demand for cyber security experts is growing at 12 times the overall job market

¹⁴ <http://cybersecuritychallenge.org.uk/education/university-mentoring-and-cyber-camps/>

¹⁵ Cyber Security Market by Solutions (IAM, Encryption, DLP, UTM, Antivirus/Antimalware, Firewall, IDS/IPS, Disaster Recovery), Services, Security Type, Deployment Mode, Organization Size, Vertical & Region - Global Forecast to 2021, marketsandmarkets.com, July 2016, Report Code: TC 3485.

¹⁶ MATT ASAY, The Internet Of Things Will Need Millions Of Developers By 2020, 27 Jun, 2014. <http://readwrite.com/2014/06/27/internet-of-things-developers-jobs-opportunity>.

Jobs in cloud computing: One of the most evident effects of the shift to Cloud technologies is that there is a growing demand for a more balanced focus between business development and application development. In job markets, positions for Cloud Specialists “will provide design, engineering and expertise of the cloud environment”; Cloud Computing Architect is “seating in a critical role to drive the architect/design and implementation for cloud-based solutions”¹⁷

Jobs in Big Data Analytics: Data technology and data science has an incredible rise over the past few years. Enterprise in every industry is investing to be more data-driven in how they do business. This movement has enabled the job market for data tech and data science expertise to grow at an exponential pace. *“By 2018, the United States alone could face a shortage of 140,000 to 190,000 people with deep analytical skills as well as 1.5 million managers and analysts with the know-how to use the analysis of big data to make effective decisions”.*¹⁸
